INTRODUCTION

Introduction	2
I. Linear algebra	
I.1. Vector spaces	4
I.2. Matrices and determinants	9
I.3. Systems of linear algebraic equations	17
I.4. Linear mappings of Euclidean spaces	21
I.5. Eigenvalues and eigenfunctions of square matrices	24
II. Analytic geometry in $E_3$	
II.1. Some basic notions	27
II.2. Straight lines in $E_3$	29
II.3. Planes in $E_3$	33
II.4. Quadric surfaces in $E_3$	37
III. Differential calculus	
The extended set of real numbers, extremes of sets in $\mathbf{R}$ , neighbourhoods of points in $\mathbf{R}$	40
III.1. Sequences of real numbers	41
III.2. Functions – basic notions	45
III.3. Limit and continuity of a function	50
III.4. Derivative of a function	57
III.5. Applications of derivatives, behaviour of a function	65
III.6. Parametric representation of functions	76
III.7. Approximate solution of a nonlinear equation $f(x) = 0$	80
III.8. Complex and vector functions of a real variable	84
IV. Integral calculus	
IV.1. Primitive function, indefinite integral	86
IV.2. Integration by parts	90
IV.3. Integration by substitution	92
IV.4. Integration of simple rational functions	95
IV.5. Integration of functions of the type $\sin^n x \cdot \cos^m x$	100
IV.6. Integration of some other types of functions	102
IV.7. Differential equations with separable variables	106
