3	Thermodynamics of Interfaces 35	2
3.1	Thermodynamic Functions for Bulk Systems 35	2.1
3.2	Surface Excess 36	2.2
3.3	Thermodynamic Relations for Systems with an Interface 40	2.3
3.3.1	Internal Energy and Helmholtz Energy 40	2.3.1
3.3.2	Equilibrium Conditions 41	2.3.2
3.3.3	Location of Interface 42	2.3.3
3.3.4	Gibbs Energy and Enthalpy 43	2.3.4
3.3.5	Interfacial Excess Energies 44	2.3.5
3.4	Pure Liquids 46	2.3.6
3.5	Gibbs Adsorption Isotherm 48	2.4
3.5.1	Derivation 48	2.4.1
3.5.2	System of Two Components 49	2.4.2
3.5.3	Experimental Aspects 51	2.4.3
3.5.4	Marangoni Effect 53	2.4.4
3.6	Summary 54	2.4.5
3.7	Exercises 55	2.4.6

4	Charged Interfaces and the Electric Double Layer	57
4.1	Introduction	57
4.2	Poisson–Boltzmann Theory of Diffuse Double Layer	58
4.2.1	Poisson–Boltzmann Equation	58
4.2.2	Planar Surfaces	59
4.2.3	The Full One-Dimensional Case	62
4.2.4	The Electric Double Layer around a Sphere	63
4.2.5	Grahame Equation	64
4.2.6	Capacitance of Diffuse Electric Double Layer	66
4.3	Beyond Poisson–Boltzmann Theory	67
4.3.1	Limitations of Poisson–Boltzmann Theory	67
4.3.2	Stern Layer	69
4.4	Gibbs Energy of Electric Double Layer	70
4.5	Electrocapillarity	72
4.5.1	Theory	73
4.5.2	Measurement of Electrocapillarity	75
4.6	Examples of Charged Surfaces	76
4.7	Measuring Surface Charge Densities	84
4.7.1	Potentiometric Colloid Titration	84
4.7.2	Capacitances	86
4.8	Electrokinetic Phenomena: the Zeta Potential	87
4.8.1	Navier–Stokes Equation	88
4.8.2	Electro-Osmosis and Streaming Potential	90
4.8.3	Electrophoresis and Sedimentation Potential	92
4.9	Types of Potential	95
4.10	Summary	97
4.11	Exercises	97
5	Surface Forces	99
5.1	Van der Waals Forces between Molecules	99
5.2	Van der Waals Force between Macroscopic Solids	103
5.2.1	Microscopic Approach	104
5.2.2	Macroscopic Calculation – Lifshitz Theory	107
5.2.3	Retarded Van der Waals Forces	112
5.2.4	Surface Energy and the Hamaker Constant	113
5.3	Concepts for the Description of Surface Forces	113
5.3.1	The Derjaguin Approximation	113
5.3.2	Disjoining Pressure	116
5.4	Measurement of Surface Forces	117
5.5	Electrostatic Double-Layer Force	120
5.5.1	Electrostatic Interaction between Two Identical Surfaces	120
5.5.2	DLVO Theory	125
5.6	Beyond DLVO Theory	127
5.6.1	Solvation Force and Confined Liquids	127
5.6.2	Non-DLVO Forces in Aqueous Medium	129

5.7	Steric and Depletion Interaction	130	Depletion Forces	131
5.7.1	Properties of Polymers	130	Depletion of Polymer Surfaces	131
5.7.2	Force between Polymer-Coated Surfaces	131	Surface Energy	132
5.7.3	Depletion Forces	134	Depletion of Spherical Particles	134
5.8	Spherical Particles in Contact	135	Surface-Sphere Interactions	135
5.9	Summary	140	Surfaces and Depletion	140
5.10	Exercises	141	Surface Diffusion	141
6	Contact Angle Phenomena and Wetting	143	Theoretical Description	143
6.1	Young's Equation	143	Measurement of Contact Angles	143
6.1.1	Contact Angle	143	Solid-Solid Interactions	146
6.1.2	Derivation	144	Wetting by Monolayers	147
6.1.3	Line Tension	148	Optical Microscopy	147
6.1.4	Complete Wetting and Wetting Transitions	149	Electrostatics	149
6.1.5	Theoretical Aspects of Contact Angle Phenomena	150	Diffusion Limited	150
6.2	Important Wetting Geometries	153	Diffusion with Gradients	153
6.2.1	Capillary Rise	153	Specroscopic Methods	156
6.2.2	Particles at Interfaces	155	Optical Techniques	157
6.2.3	Network of Fibers	156	Surface Spectroscopy	157
6.3	Measurement of Contact Angles	158	Surface Spectroscopy	158
6.3.1	Experimental Methods	158	Surfaces	159
6.3.2	Hysteresis in Contact Angle Measurements	159	Particulars	159
6.3.3	Surface Roughness and Heterogeneity	161	Surfaces	161
6.3.4	Superhydrophobic Surfaces	163	Surfaces	163
6.4	Dynamics of Wetting and Dewetting	164	Surfaces	164
6.4.1	Spontaneous Spreading	164	Adsorption	164
6.4.2	Dynamic Contact Angle	166	Desorption	166
6.4.3	Coating and Dewetting	170	Diffusion	168
6.5	Applications	172	Absorption Time	168
6.5.1	Flotation	172	Cross-section of Adsorption	168
6.5.2	Detergency	173	Presentations of Adsorption	168
6.5.3	Microfluidics	174	Effects of Adsorption	168
6.5.4	Electrowetting	176	Electrodes	168
6.6	Thick Films: Spreading of One Liquid on Another	176	Diffusion	168
6.7	Summary	179	Absorption Model	168
6.8	Exercises	179	Langmuir Adsorption Isotherm	168
7	Solid Surfaces	181	Liquid-Liquid Equilibrium and Gibbs Free Energy	168
7.1	Introduction	181	Langmuir Adsorption Isotherm	168
7.2	Description of Crystalline Surfaces	182	BLT Adsorption Isotherm	168
7.2.1	Substrate Structure	182	Absorption of Molecules	168
7.2.2	Surface Relaxation and Reconstruction	184	Polarized Light	168
7.2.3	Description of Adsorbate Structures	186	Experiments	168
7.3	Preparation of Clean Surfaces	187	Measuring Adsorption Isotherms	168
7.3.1	Thermal Treatment	187	Adsorption of Polymers	168
7.3.2	Plasma or Sputter Cleaning	188	Adsorption of Polymers	168

7.3.3	Cleavage	189	7.7
7.3.4	Deposition of Thin Films	189	1.5.2
7.4	Thermodynamics of Solid Surfaces	190	5.8.2
7.4.1	Surface Energy, Surface Tension, and Surface Stress	190	5.7.2
7.4.2	Determining Surface Energy	193	8.2
7.4.3	Surface Steps and Defects	196	9.2
7.5	Surface Diffusion	198	10.2
7.5.1	Theoretical Description of Surface Diffusion	199	11.2
7.5.2	Measurement of Surface Diffusion	202	12.2
7.6	Solid–Solid Interfaces	205	13.2
7.7	Microscopy of Solid Surfaces	208	14.2
7.7.1	Optical Microscopy	208	15.2
7.7.2	Electron Microscopy	209	16.2
7.7.3	Scanning Probe Microscopy	211	17.2
7.8	Diffraction Methods	214	18.2
7.8.1	Diffraction Patterns of Two-Dimensional Periodic Structures	214	19.2
7.8.2	Diffraction with Electrons, X-Rays, and Atoms	216	20.2
7.9	Spectroscopic Methods	218	21.2
7.9.1	Optical Spectroscopy of Surfaces	218	22.2
7.9.2	Spectroscopy Using Mainly Inner Electrons	222	23.2
7.9.3	Spectroscopy with Outer Electrons	224	24.2
7.9.4	Secondary Ion Mass Spectrometry	225	25.2
7.10	Summary	226	26.2
7.11	Exercises	227	27.2
8	Adsorption	229	
8.1	Introduction	229	28.2
8.1.1	Definitions	229	29.2
8.1.2	Adsorption Time	231	30.2
8.1.3	Classification of Adsorption Isotherms	232	31.2
8.1.4	Presentation of Adsorption Isotherms	234	32.2
8.2	Thermodynamics of Adsorption	235	33.2
8.2.1	Heats of Adsorption	235	34.2
8.2.2	Differential Quantities of Adsorption and Experimental Results	237	35.2
8.3	Adsorption Models	239	36.2
8.3.1	Langmuir Adsorption Isotherm	239	37.2
8.3.2	Langmuir Constant and Gibbs Energy of Adsorption	241	38.2
8.3.3	Langmuir Adsorption with Lateral Interactions	242	39.2
8.3.4	BET Adsorption Isotherm	243	40.2
8.3.5	Adsorption on Heterogeneous Surfaces	246	41.2
8.3.6	Potential Theory of Polanyi	247	42.2
8.4	Experimental Aspects of Adsorption from Gas Phase	249	43.2
8.4.1	Measuring Adsorption to Planar Surfaces	249	44.2
8.4.2	Measuring Adsorption to Powders and Textured Materials	251	45.2
8.4.3	Adsorption to Porous Materials	253	46.2

8.4.4	Special Aspects of Chemisorption	260	Surfaces of Solids	11.1

Preface

This textbook serves as a general introduction to surface and interface science. It focuses on basic concepts rather than specific details, on understanding rather than on learning facts. The most important techniques and methods are introduced. The book reflects that interfacial science is a diverse and interdisciplinary field of research. Several classic scientific or engineering disciplines are involved. It contains basic science and applied topics such as wetting, friction, adhesion, lubrication. Many textbooks concentrate on certain aspects of surface science, such as techniques involving ultrahigh vacuum or classic "wet" colloid chemistry. We chose not to include all aspects because we feel that for a good understanding of surface science a comprehensive introduction is helpful.

Our manuscript is based on lectures given at the universities of Siegen and Mainz. It addresses advanced students of engineering, chemistry, physics, biology and related subjects and scientists in academia or industry who are not yet specialists in surface science but desire solid background knowledge of the subject. The level is introductory for scientists and engineers who have a basic knowledge of the natural sciences and mathematics. Certainly an advanced level of mathematics is not required.

When looking through the pages of this book you will see a substantial number of equations. Please do not be scared! We preferred to give all transformations explicitly rather than writing "as can easily be seen" and stating the result. Chapter 3 is the only exception; to appreciate that chapter, a basic knowledge of thermodynamics is required. However, you can skip it and still be able to follow most of the rest of the book. If you do decide to skip it, please at least read and try to gain an intuitive grasp of surface excess (Section 3.2) and the Gibbs adsorption equation (Section 3.5.2).

A number of problems with solutions are included to enable for self-study. Unless noted otherwise, the temperature was assumed to be 25 °C. At the end of each chapter the most important equations, facts and phenomena are summarized.

One of the main problems with writing a textbook is trying to limit its content. We tried hard to keep the volume within the scope of one advanced course lasting roughly 15 weeks, two days per week. Unfortunately, this meant cutting short or leaving out altogether certain topics. Statistical mechanics, heterogeneous catalysis, and polymers at surfaces are issues that could be expanded.
