

Table of Contents

Preface	1
Chapter 1: Where Do I Start?	5
Installing QGIS 3.4	5
Installing QGIS on Windows	6
Installing QGIS using the OSGeo4W installer	7
Latest QGIS release	7
Advanced installer (to specify version)	9
Installing on Ubuntu	10
Running QGIS for the first time	11
Plugins	13
What is new in QGIS 3	15
Introducing the QGIS user interface	15
Menu bar	17
Toolbars	17
Information bar	21
Layers and browser panels	22
Map	24
Finding help and reporting issues	26
Summary	26
Chapter 2: Data Creation and Editing	27
Data formats	28
GeoPackage	28
Loading data	28
Getting data into QGIS	29
Interacting with data	32
Navigation	32
Data attributes toolbar	33
Inspecting the data	34
Measuring data	35
Selecting data	36
Vector data	40
Editing attribute data	40
Building your own vector data	47
Projections	49
Creating data	51
Create a ShapeFile	51
Editing tools	53
Snapping	56
Mistakes and correcting with editing	57

Populating attribute data	62
Data joins	63
Using temporary scratch layers	68
Checking for topological errors and fixing them	69
Finding errors with the Topology Checker	69
Fixing invalid geometry errors	72
Raster data	73
Other data	77
Creating a GeoPackage	77
Exporting to a different format	81
Spatial Databases	81
Summary	82
Chapter 3: Visualizing Data	83
Styling data	84
Interactive styling	84
Styling raster layers	85
Layer styling – Terrain	86
Layer styling – satellite image	89
Raster Toolbar	91
Styling data – landcover map	92
Saving styles	95
Styling vector layers	96
Creating point styles – an example of an airport style	97
Simple marker	101
SVG	102
Default symbols	103
Creating line styles – an example of a river	105
Creating polygon styles – an example of a landmass style	109
Summary	114
Chapter 4: Creating Great Maps	115
Communicating with data	116
Labeling	116
Interactively editing labels	119
Displaying more information using labels	121
Line labels	124
Polygon labels	127
Creating a map	129
Loading data	131
Adding layout items	133
Add a title (or any text)	135
Further map creation options	138
Adding Grids	139
Adding an overview map	140
Adding an attribute table	141

Map outputs	143
Saving maps to share	143
Creating an Atlas	144
Presenting Maps online	145
Exporting a web map	145
QGIS2Web – an excellent way to export your data in openlayers or leaflet	146
Exporting a 3D web map	147
Summary	151
Chapter 5: Spatial Analysis	153
Processing toolbox	154
Analyzing raster data	154
Clipping rasters	154
Analyzing elevation/terrain data	156
Terrain projections – slope maps	160
Using the raster calculator	161
Combining raster and vector data	166
Converting between rasters and vectors	166
Raster to vector	166
Vector to raster	169
Accessing raster and vector layer statistics	171
Computing zonal statistics	174
Creating a heatmap from points	177
Advanced vector and raster analysis with processing	179
Finding nearest neighbors	179
Converting between points, lines, and polygons	181
Building workflows with processing tools	183
Identifying features in the proximity of other features	184
Sampling a raster at point locations	186
Mapping density with hexagonal grids	188
Calculating area shares within a region	192
Batch processing multiple datasets	198
Automated geoprocessing with the graphical modeler	199
Create a model that automates the creation of hexagonal heatmaps	201
Documenting and sharing models	205
Summary	206
Chapter 6: Extending QGIS with Python	207
Adding functionality using actions	207
Configuring your first Python action	208
Opening files using actions	211
Opening a web browser using actions	214
Getting to know the Python console	214
Loading and exploring datasets – vector data	215
Loading and exploring datasets – raster data	217
Styling layers	218
Filtering data	220

Creating a memory layer	221
Exporting map images	222
Creating custom geoprocessing scripts using Python	224
Writing your first processing script	224
Building a basic buffer script	226
Running the script	229
Extending the script	230
Developing your first plugin	232
Creating the plugin template with Plugin Builder	233
Accessing qgis.core from the command line external to Python	237
Setting up the pb_tool	238
Assigning a logo to the plugin	241
Customizing the plugin GUI	242
Implementing plugin functionality	244
Adding a message box when OK is clicked	246
3D view	246
Summary	251
Other Books You May Enjoy	253
Index	257
