

# VOLUME 1 - PERIODONTOLOGY

## CONTENTS

Preface	XXI
<b>CHAPTER 1: INTRODUCTION</b>	<b>1</b>
<b>CHAPTER 2: EPIDEMIOLOGY, ETIOPATHOGENESIS, ANATOMICAL LESIONS</b>	<b>5</b>
Epidemiology	2
Etiopathogenesis	10
Local risk factors	30
Anatomical defects anatomical alterations of the soft tissue	30
Bone defects	36
<b>CHAPTER 3: IDENTIFYING PERIODONTAL DISEASE: PERIODONTAL EXAMINATION AND DIAGNOSTIC PROCEDURES</b>	<b>45</b>
Introduction	46
The periodontal examination and the diagnostic procedure	47
Clinical examination and periodontal chart	48
Medical history	50
Physical examination	52
Photographic documentation	68
Dental study casts	69
Radiographic examination	71
Laboratory and diagnostic tests	74
Microbiologic tests	74
Genetic tests	76
Immunologic tests	76
Biochemical tests	76
Conclusions	77

**CHAPTER 4: CLASSIFICATION AND PROGNOSIS OF PERIODONTAL DISEASES**

	<b>85</b>
Classification of periodontal diseases	86
Gingival diseases	87
Gingival diseases induced by bacterial plaque	87
Gingival diseases primarily associated with local factors	87
Gingival diseases associated with endogenous steroid sex hormones (endocrine-related gingival disease)	88
Drug-induced gingival diseases	89
Gingival diseases associated with systemic disease	90
Gingival diseases associated with malnutrition	91
Infectious gingivitis	92
Gingivitis associated with hiv infection	94
Desquamative gingivitis associated with systemic dermatologic diseases	94
Allergic reactions	97
Toxic reactions	98
Reactions caused by foreign bodies	98
Mechanical trauma	98
Thermal trauma	98
Periodontitis	99
Chronic periodontitis	100
Aggressive periodontitis	101
Periodontitis modified by systemic factors	103
Diabetes mellitus	104
Exposure to environmental factors	104
Necrotizing periodontal diseases	105
Necrotizing ulcerative gingivitis	106
Necrotizing ulcerative periodontitis	106
Periodontitis associated with endodontic lesions	107
Developmental or acquired deformities and conditions	109
Tooth-related factors	109
Mucogingival deformities	110
Occlusal trauma	110
Prognosis in periodontology	111
Prognostic factors and assessment methods	112
How to establish a prognosis	116

<b>CHAPTER 5: CAUSATIVE TREATMENT: STRATEGIES FOR THE MANAGEMENT OF PERIODONTITIS AND CONTROL OF RISK FACTORS</b>	<b>121</b>
The periodontal patient	122
Psychology	123
Communication	123
Managing lifestyles	125
Supragingival biofilm control	126
Buccal and occlusal mechanical plaque control performed at home	127
Interdental home plaque control	129
Chemical supragingival plaque control	133
Professional mechanical plaque removal	136
Control of risk factors	137
Modifiable risk factors	138
Control of local risk factors	142
Treatment rationales and wound healing	143
Subgingival instrumentation	143
Critical probing depth	143
Root instrumentation technique	147
Curettes	147
Laser and photodynamic therapy	150
Rotating instruments	151
Clinical approaches to subgingival instrumentation	152
Adjunctive (supportive) periodontal therapy	156
Systemic antibiotic therapy	156
Local antibiotic/antimicrobial (pharmacologic) therapy	157
Immunomodulatory therapies	158
<b>CHAPTER 6: PERIODONTAL REASSESSMENT AND FORMULATION OF A DEFINITIVE PERIODONTAL TREATMENT PLAN</b>	<b>167</b>
Case re-evaluation	169
Assessing the effectiveness of causal therapy	169
Risk profile	173
Interpretation of the clinical situation during reevaluation	176
Formulation of a treatment plan	179
Extraction of periodontally compromised teeth	189
Prognosis of the overall dentition	190

## CONTENTS

Changing the periodontal prognosis	191
Feasibility and prognosis of surgical intervention	191
Choice of the surgical goal	193
Alternatives to surgical treatment	195
Conclusions	195

### **CHAPTER 7: PRINCIPLES OF PERIODONTAL SURGERY: CRITICAL ELEMENTS IN FLAP DESIGN AND EXECUTION** 197

Introduction	198
Presurgical phase	199
Surgical phases	199
Flap incision	201
Flap elevation	203
Root preparation	206
Bone management	207
Flap mobilization and positioning	208
Flap stability	209
Postsurgical phase	214
Influence of surgical phases on periodontal wound healing	215

### **CHAPTER 8: INSTRUMENTS FOR PERIODONTAL THERAPY AND IMPLANT TREATMENT** 223

Introduction	224
Instruments for periodontal diagnosis	224
Instruments for the incision, elevation, and closure of flaps	233
Periosteal elevators	236
Instruments for implant placement	244
Instruments for intraoral bone harvesting	245
Instruments for guided bone regeneration (GBR)	248
Organization and sterilization of the surgical armamentarium	251

### **CHAPTER 9: THE ACCESS FLAP** 255

Introduction	256
Therapeutic aims and indications	256
Surgical technique	258
Therapeutic efficacy	273
Prognostic factors	276
Conclusions	277

## CHAPTER 10: THE APICALLY POSITIONED FLAP AND OSSEOUS RESECTIVE SURGERY 283

Introduction and historical perspective on osseous resective surgery	284
Definitions, surgical endpoints and clinical indications of osseous resective surgery	285
Soft tissue management in ors	287
The apically positioned flap	287
The thinned palatal flap	295
The lingual full-thickness flap	296
Hard tissue management in ors	298
Classical ors	298
Amount of resected bone following ors with or without fiber retention technique	304
Histologic healing following ors and fibreors	304
Histology following ors	305
Histology following fibreors	305
Soft tissue healing following ors and fibreors	306
Clinical efficacy of ors and frors for pocket elimination	309
Clinical efficacy of ors and frors for pocket elimination	310
Long-term clinical efficacy of ors and fibreors	311
Pretreatment measurements	311
Surgical procedures	312
Clinical outcomes of ors in treating a gummy smile	313
Postsurgical recommendations and complications following ors	314
Conclusions	314

## CHAPTER 11: PERIODONTAL REGENERATION IN SINGLE-ROOTED AND MULTIROOTED TEETH WITHOUT FURCATION INVOLVEMENT 317

Introduction	318
Clinical indications and efficacy	318
Clinical variability: patient, site, and surgical prognostic factors	319
Patient factors	319
Defect factors	319
Surgical factors	321
Surgical procedures	322
Papilla preservation flaps	322
Crestal incision	326
Minimally invasive surgical techniques	326

CONTENTS	Regenerative materials and clinical outcomes	333
	Regenerative materials and papilla preservation flaps	333
	Regenerative materials and minimally invasive surgery	340
	Instruments, materials and technical considerations	343
	Clinical strategies	343
	Long-term effects and benefits of regeneration	351
	Conclusions	352

## **CHAPTER 12: TREATMENT OF MULTIROOTED TEETH WITH FURCATION INVOLVEMENT: SURGICAL, CONSERVATIVE, AND RESECTIVE APPROACHES 357**

	Introduction: multirooted teeth and periodontal disease	358
	Important preliminary considerations	358
	Furcation access diameter	358
	Root irregularities and roughness	358
	Root complex	359
	Cervical enamel projections and enamel pearls	360
	Accessory pulp canals	360
	Presurgical clinical diagnosis	361
	Clinical diagnosis	362
	Radiologic diagnosis	362
	Treatment of furcation defects	365
	Access flap surgery (open-flap scaling and root planing)	365
	Tunnel preparation	369
	Root separation and resection	371
	Conclusions	404

## **CHAPTER 13: OSSEOUS RESECTIVE SURGERY IN PERIO-PROSTHETIC PATIENTS 407**

	Introduction	408
	Treatment plan and sequence of treatments	408
	Definition of treatment plan and targets of prosthetic treatment in periodontal patients	408
	Sequence of treatments in prosthetic rehabilitation of periodontal patients	411
	The position of crown margins in patients with advanced periodontitis	413
	Prosthetic treatment in periodontal patients: operative techniques	414
	Intraoperative preparation	414

Combined preparation	417
Biologic adaptation of vertical intraoperative preparations at prosthetic abutments	418
Periodontal surgery for prosthetic treatment	419
Crown-lengthening procedure	419
Fiber retention osseous resective surgery (fibreors)	422
Treatment of complex perio-prosthetic cases	425
Long-term effect of prosthetic treatment in periodontal patients	433
<b>CHAPTER 14: MULTIROOTED TEETH WITH FURCATION INVOLVEMENT: REGENERATIVE SURGICAL APPROACHES</b>	<b>439</b>
Introduction	440
Different response to regenerative treatment between single-rooted teeth with infrabony lesions and multirooted teeth with infrabony defects and class II furcation involvement	440
Indications	443
Regenerative strategies	444
Long-term results	448
Conclusions	448
<b>CHAPTER 15: ROOT COVERAGE TECHNIQUES FOR SINGLE RECESSIONS</b>	<b>451</b>
Diagnosis	456
Treatment	454
Treatment of hard tissues	455
Treatment of soft tissues	455
Guided tissue regeneration	465
Treatment prognosis	467
1. Patient-specific factors	467
2. Tooth-/site-specific factors	468
3. Technique-related factors	468
Conclusions and recommendations	470
<b>CHAPTER 16: ROOT COVERAGE TECHNIQUES FOR MULTIPLE GINGIVAL RECESSIONS</b>	<b>477</b>
Introduction	478
Decision tree for the choice of surgical technique	479
Treatment of multiple gingival recessions in the maxilla	481

## CONTENTS

Envelope caf with enamel matrix derivative	496
Treatment of multiple gingival recessions in the mandible	497
Caf, lateral approach with releasing incision mesial to the canine and site-specific connective tissue graft	498
Two-stage technique	506
Modified tunnel technique with connective tissue graft	512
Complications	513
Conclusions	516

## CHAPTER 17: MUCOGINGIVAL THERAPY 519

Aims of mucogingival surgery	521
Attached gingiva augmentation procedures	521
Frenectomy	521
Flaps for increasing the width of the attached gingiva	522
Apically repositioned flap (apical to the bone ridge)	523
Rotated flap	52
Double papilla flap	525
Free gingival grafts	526
Conclusions	534
Alveolar ridge augmentation techniques	535
Onlay graft	535
Roll flap	537
Bilaminar techniques	538
Recovery of interdental papillae	542
Recovery of the papilla	544

## CHAPTER 18: RELATIONSHIP BETWEEN PERIODONTOLOGY AND RESTORATIVE DENTISTRY 553

Introduction	554
Biologic width	555
Dental tissue exposure	559
Definition	559
Nonsurgical exposure	561
Margin relocation	562
Surgical crown lengthening	567
Definition	567
Indications	567

Healing process	582
Postoperative instructions	583
Contraindications	584
Orthodontic extrusion	587
Definition	587
Methodology and clinical cases	587
Contraindications	592
Instruments	593
Conclusions	593

**CHAPTER 19: MANAGEMENT OF CLINICAL PROCEDURES  
IN PATIENTS WITH SYSTEMIC DISEASES UNDER  
PHARMACOLOGIC TREATMENT**

	<b>597</b>
Introduction	598
Preliminary risk assessment: patient's medical history	600
Clinical risks and medical emergencies	602
Clinical risk: precautions in special conditions	611
Pregnant women	611
Conditions that require antibiotic prophylaxis	612
Conditions that require modification or suspension of pharmacologic treatment	615
Patients with cardiovascular disease	620
Patients with diabetes	627
Patients taking bisphosphonates for osteoporosis and/or cancer therapy	628
Patients receiving treatment for gastrointestinal diseases	631
Patients receiving treatment for chronic obstructive pulmonary disease and asthma	632
Patients receiving therapy for nervous system diseases	633
Patients receiving treatment for neoplasms and cancer metastases	635

<b>CHAPTER 20: DENTAL IMPLANTS AND PERIODONTAL THERAPY: SELECTION CRITERIA AND TREATMENT STRATEGIES FOR THEIR USE IN DAILY PRACTICE</b>	<b>643</b>
Introduction	644
Selection criteria: prognostic issues in implant treatment planning for the periodontal patient	645
Treatment objectives: point of convergence between clinician and patient	649
Treatment options	652
Shortened dental arch	654
Implant and distal cantilever	658
Implant-tooth connection	660
Short implants	661
Implants associated with bone augmentation	661
Strategic, economic and management considerations	662
Clinical results: predictability and	
Long-term success	670
Clinical cases	671
Conclusions	702
<b>CHAPTER 21: THE FOUNDATIONS OF IMPLANT THERAPY: THE EVOLUTION OF SCIENTIFIC CONCEPTS IN IMPLANT DENTISTRY</b>	<b>705</b>
Introduction	706
Evolution of the postulates and development of modern implantology	708
The surgical incision	709
When to place and load an implant	709
Timing of implant placement	709
When loading an implant	713
The rationale of implant positioning	719
Sinus elevation	719
Tilted implants	720
Short implants	721
Prosthetically driven implant therapy: CT study, dedicated software and Flapless surgery	722

Success criteria in implant therapy	723
Implant survival	723
Implant success	725
Quality of life	728
Conclusions	729
<b>CHAPTER 22: CLINICAL AND INSTRUMENTAL EVALUATION</b>	<b>735</b>
Introduction	736
Extraoral examination	736
Facial esthetics and characteristics of the fully edentulous patient	736
Facial analysis	736
Smile line	739
Soft tissue head and neck palpation	741
Mouth opening	741
Orthodontic analysis	742
Intraoral examination	742
Type of edentulism	743
Oral hygiene level	743
Salivary flow and tongue size	743
Arch form	744
Periodontal examination	747
Residual support and classification of bone quality and quantity	747
Occlusal and orthodontic evaluation	748
Evidence of parafunction	750
Evaluation of teeth adjacent to an edentulous site	751
Limiting anatomical structures	753
Radiographic examination	757
Clinical considerations	758
Intraoral radiographs	760
Panoramic radiograph	760
Tomography	761
Computer-assisted implant surgery	767
Indications for radiographic examinations to be carried out in different clinical stages	770
Future trends and developments	775

CONTENTS	<b>CHAPTER 23: RISK ASSESSMENT IN IMPLANT THERAPY</b>	<b>779</b>
	Introduction	780
	Systemic risk factors	781
	History oriented to surgery	781
	Conclusions	791
	Systemic risk factors for implant therapy	792
	Smoking	792
	Diabetes	792
	Radiation therapy	793
	Oncologic chemotherapy	794
	Immunodeficiency	794
	Unrealistic expectations	794
	Age	794
	Local risk factors	795
	Oral pathology	795
	Endodontic lesion	795
	Malocclusion and parafunction	795
	Implant therapy in patients susceptible to periodontitis	796
	Untreated periodontitis	796
	Treated periodontitis	796
	Fully edentulous patients following periodontitis	796
	 <b>CHAPTER 24: IMPLANT SURGERY IN PARTIALLY OR FULLY EDENTULOUS AREAS</b>	 <b>803</b>
	Diagnostic workup in prosthetically driven implant surgery in partially or fully edentulous areas	804
	Preliminary clinical and radiographic exam	804
	Mounting plaster casts on an articulator and diagnostic wax-up	805
	Diagnostic template	805
	Computed tomography	805
	Surgical template	805
	Simplified diagnostic workup	805
	Principles of implant surgery	808
	Flap design in implant surgery	808
	Principles of three-dimensional implant positioning	812

Operating sequence: implant site preparation and implant placement	814
Tips and tricks for implant site preparation according to bone quality and density	819
Implant loading protocols	820
Conventional (delayed) loading	820
Early loading	820
Immediate loading	820
Clinical applications of implant dentistry with partial edentulism of lateroposterior areas	823
Single-tooth bounded saddle or free-end saddle edentulism	823
Multiple edentulism with natural teeth distally and mesially or a free-end saddle	823
Applications of implants in full edentulism	829
Indications	829
Implant-borne prosthetic rehabilitation of the edentulous	829
Implant-borne prosthetic rehabilitation of a fully edentulous mandible	834

**CHAPTER 25: MANAGEMENT OF THE FRESH EXTRACTION SOCKET 847**

Introduction	848
Overview of anatomy	849
Scientific evidence	850
Healing of the postextraction site	850
Dimensional changes of the alveolar ridge	854
Surgical protocols for alveolar preservation	856
Critical analysis of clinical research	858
Clinical indications for use of the alveolar preservation technique	859
Clinical practice	860

**CHAPTER 26: POSTEXTRACTION IMPLANTS 875**

Introduction	876
Post-extraction implants in esthetic areas	878
Immediate post-extraction implants (type 1)	878
Early postextraction implant placement (type 2 and 3)	903
Immediate post-extraction implant in the molar region	909
Conclusion	912

<b>CHAPTER 27: SOFT TISSUE MANAGEMENT AND RECONSTRUCTION TECHNIQUES</b>	<b>915</b>
Introduction	916
Role of soft tissues in implantology and anatomical peculiarities	917
Peri-implant soft tissue stability	917
Clinical rationale	918
Peri-implant soft tissue treatment: clinical indications	919
Surgical instruments	920
Surgical techniques	927
Surgical tooth extraction	928
Frenectomy	929
Autologous connective tissue graft combined with tooth extraction and/or implant placement	931
Epithelial-connective tissue graft	935
Palatal flaps	939
Laterally sliding flap	950
Crestal horizontal linear incision flap	954
Apically positioned flap at bony crest	959
Soft tissue punch technique	963
Roll flap technique	964
Bilaminar techniques (subepithelial connective tissue autograft)	973
Combined techniques	978
Connective matrices technique	979
Soft tissue management before implant placement	980
Surgical techniques	981
Soft tissue management at the implant placement surgery	982
Surgical techniques at implant placement	983
Soft tissue management as part of stage-two implant surgery (reentry)	986
Surgical techniques	989
Postoperative periodontal maintenance therapy and complications	993
Complications	994
Conclusions	994
 <b>CHAPTER 28: HORIZONTAL BONE RECONSTRUCTION TECHNIQUES</b>	 <b>999</b>
Introduction	1000
Block grafts	1001

Split crest	1008
GBR	1015
<b>CHAPTER 29: VERTICAL BONE AUGMENTATION BY MEANS OF GUIDED BONE REGENERATION</b>	<b>1023</b>
Introduction	1024
Biologic bases of guided bone regeneration	1026
Surgical technique: vertical ridge augmentation	1027
Pre- and postoperative patient management	1027
Flap design and preparation of the recipient site	1028
Membrane positioning	1029
Bone graft	1030
Suturing technique	1031
Membrane removal	1032
Implant placement	1033
Surgical technique in the esthetic area	1036
Flap design and preparation of the recipient site	1036
Membrane positioning	1037
Soft tissue management and prosthodontics	1040
Vertical ridge augmentation combined with sinus floor elevation	1042
Flap design and preparation of the recipient site	1044
Membrane positioning	1044
Suturing technique	1044
Implant placement	1044
Clinical management of complications in guided bone regeneration	1047
Exposure and infection of the membrane	1047
Lesions associated with the periosteal incisions	1051
<b>CHAPTER 30: SINUS ELEVATION TECHNIQUES</b>	<b>1055</b>
Introduction	1056
Sinus anatomy	1057
Sinus membrane	1058
Underwood's septa	1060
Vascularization	1062
Innervation	1063
Contraindications for sinus elevation	1064
Preoperative diagnosis and planning	1066

CONTENTS	Surgery protocols	1070
	Lateral approach	1070
	Crestal approach	1085
	Diagnosis and management of immediate and delayed intra- and postoperative complications	1088
	Immediate postoperative complications	1090
	Postoperative delayed complications	1099
	Conclusions	1103

## **CHAPTER 31: THERAPEUTIC ALTERNATIVES TO BONE RECONSTRUCTIONS 1107**

	Introduction	1108
	Tilted implants	1109
	Biologic and biomechanical principles	1109
	Indications and contraindications	1110
	Instruments	1112
	Clinical procedures	1112
	Complications and management of tilted implants	1116
	Clinical results	1117
	Short implants	1123
	Introduction	1123
	Biologic and biomechanical principles	1123
	Indications and contraindications	1125
	Instruments	1125
	Clinical procedures	1126
	Complications	1127
	Clinical results	1128
	Conclusion	1139
	All-on-four (Nobel Biocare)	1140
	General findings	1140
	Surgical procedures	1140
	Prosthetic procedures	1143
	Results of proposed protocol	1143

<b>CHAPTER 32: IMPLANT PLACEMENT IN THE ESTHETIC ZONE</b>	<b>1147</b>	<b>CONTENTS</b>
Introduction	1148	
Definition of esthetic zone and risk profile assessment	1148	
Replacement of a single tooth	1154	
Postextraction alveolar socket healing	1154	
Anatomical and surgical criteria for defining timing	1155	
Immediate, early and delayed implant placement	1161	
Conditioning of peri-implant soft tissues	1165	
Definitive prosthetic restoration	1170	
Restoration in multiple edentulism	1174	
Anatomical and surgical criteria for implant placement	1174	
Implant-supported prosthesis plan: number, position, distribution and diameter of implants	1178	
Definitive prosthetic restoration	1180	
Conclusions	1186	
<b>CHAPTER 33: PERI-IMPLANT DISEASES</b>	<b>1189</b>	
Introduction	1190	
Peri-implant mucositis	1191	
Peri-implantitis	1191	
Microbiologic aspects	1193	
Peri-implantitis and occlusal trauma	1194	
Diagnosis and incidence of peri-implant biologic complications	1195	
Epidemiology and risk factors	1195	
Clinical examination	1196	
Radiographic examination	1201	
Treatment of peri-implant mucositis	1203	
Treatment of peri-implantitis	1205	
Implant surface decontamination	1205	
Nonsurgical therapy	1207	
Surgical access therapy	1207	
Resective surgical therapy with or without implantoplasty	1208	
Regenerative surgical therapy	1210	
Antibiotic and antiseptic therapy	1216	
Peri-implant soft tissues	1218	
Conclusion	1219	

CONTENTS	<b>CHAPTER 34: TREATMENT OF MUCOGINGIVAL DEFECTS AND ESTHETIC COMPLICATIONS IN IMPLANT THERAPY</b>	<b>1225</b>
	Introduction	1226
	Anatomical considerations	1126
	Diagnostic phase	1227
	Complication prevention strategies	1230
	Treatment of complications	1231
	Incorrect implant position	1231
	Incorrectly mesial-distal positioned implant	1234
	Correct implant position	1239
	Conclusion	1247
	<b>CHAPTER 35: SUPPORTIVE PERIODONTAL THERAPY</b>	<b>1251</b>
	Introduction and definitions	1252
	Collaboration	1255
	Patient reevaluation after active therapy	1256
	Systemic aspects	1256
	Behavioral aspects	1256
	Dental aspects	1256
	Risk evaluation and recall frequency	1257
	Operative session and instruments	1263
	Instruments	1264
	The SPT session	1264
	Radiographs	1269
	Use of antimicrobial agents	1269
	Implant management	1271
	Clinical aspects to be detected and treated during SPT	1272
	Peri-implantitis	1273
	Gingival mechanical lesions	1274
	Noncarious cervical lesions	1275
	Hypersensitivity	1277
	Root caries	1279
	Caries	1279
	Tooth mobility	1279
	Tooth migration	1280
	Conclusion	1283

XX

## CHAPTER 36: LONG-TERM OUTCOME FOR TEETH AND IMPLANTS IN PERIODONTAL PATIENTS

## CONTENTS

<b>Introduction</b>	<b>1287</b>
Introduction	1288
<b>Prognostic evaluation in scientific literature</b>	<b>1288</b>
Variables to evaluate prognosis and their clinical significance	1290
Risk evaluation	1291
<b>Long-term prognosis for teeth in periodontal patients</b>	<b>1292</b>
Prognosis in untreated patients	1292
Prognosis in treated patients	1292
<b>Long term prognosis for implants in periodontal patients</b>	<b>1295</b>
Prognosis of implants in untreated periodontal patients	1296
Prognosis of implants in treated periodontal patients	1297
<b>Risk factors for prognosis</b>	<b>1298</b>
Factors influencing tooth prognosis in treated periodontal patients	1298
Factors influencing implant prognosis in treated periodontal patients	1300
<b>Can we compare the prognosis of teeth and implants in patients with periodontitis?</b>	<b>1301</b>
Conclusion	1304
