

Content

Preface.....	5
Methodology applied for body balance testing.....	7
1 Postural sway response to different forms of exercise	22
1.1 Postural sway response to exercises with different energy yield from anaerobic glycolysis while eliciting the same heart rate.....	23
1.2 Postural sway response to exercises of moderate intensity with different duration	27
1.3 Postural sway response to different forms of resistance exercise.....	29
1.4 Postural sway response to resistance exercises with different intensity of proprioceptive stimulation eliciting the same ventilation	33
1.5 Postural sway response to different types of exercise eliciting the same ventilation	36
1.6 Postural sway response to exercises with different forms of muscle contraction	40
1.7 Postural sway response to “all-out” exercises with different activation of muscle fibers	43
1.8 The effect of maximal exercise on static and dynamic balance.....	46
1.9 The effect of jumping on visual feedback control of body position.....	48
Overview of findings	53
2 Postural sway during and after sport-specific exercises	73
2.1 Postural sway during standing on supports of different widths	74
2.2 Postural sway during two-handed and two-legged stances	75
2.3 Postural sway during standing on supports of different heights	77
2.4 Postural sway during standing with different ankle joint fixation	79

2.5	Postural sway during rifle shooting	81
2.6	Postural sway during free throw shots.....	83
2.7	Postural sway during weight lifting.....	84
2.8	Postural sway after rotational exercises.....	85
2.9	Postural sway after judo falls.....	87
2.10	Postural sway after different forms of dancing performance ...	89
2.11	Postural sway after rebound jumps.....	92
2.12	Postural sway after intermittent and continual exercise	94
2.13	Postural sway after soccer match.....	99
	Overview of findings	102
	Concluding comments.....	104
	References	105
	About the author.....	129
