Author's Very Short Introduction: Minimizing Errors in Medicinexv

1 Putting Medical Error in Context: Minimizing Errors in Medicine—Beyond the “Oops!” Factor 1

Executive Summary..... 1

Thoughts to Think About2

Introductory Comments: Errors as Part of Advances in Medicine4

How to View Medical Errors Today.....4

What Is Covered in This Book.....6

Considering the Medical Error Problem in Light of Recent Experience6

Medical Error and Patient Safety9

How This Book Might Contribute to the Present State of Human Error Experience and Patient Safety..... 10

References..... 11

2 The Valued Legacy of Error and Harm in General: Error and Harm across General Human Experience in Nonmedical Domains—Welcome to Lathology 15

Executive Summary..... 15

Thoughts to Think About 16

Introductory Comments 17

A Brief History of Recent Human Error Experience..... 18

Definition of Human Error and Other Related Terms..... 19

 Note about Heterogeneity of Terms.....20

 Note about Error versus Accident 20

 Note regarding Error versus Adverse Effect.....26

Taxonomy of Error.....26

 Person versus System.....27

Planning versus Execution	27
Expertise, Its Quality, and Uses	28
Cognition and Cognitive Process as a Core Source of Error and of Its Understanding and Control	28
Models of Error, Their Development, and Contributing Sites and Entities in Context	30
Person-Oriented Models	30
Rasmussen's Model of Human Activity in Relation to Error	31
Person-Related Errors in the Domain of Skills, Rules, and Knowledge	33
Models of Reasoning and Decision Making Related to Informal Logic and Critical Thinking: Aristotle, Toulmin, Heuristics	33
Argument and Argumentation Models in Optimal Conditions	34
System Functioning-Oriented Models, or "One Thing Goes with and Leads to Another"	40
A Practical Example of an Erroneous Event and of Its Steps as Seen through Their Identification in Various Taxonomies of Error	41
An Epidemiological Approach to the Error Problem	42
A Word about Root Cause Analysis and Research	44
Beyond Epidemiology: Other Models of Search for Causes	45
Epidemiological Implications of the Error Analysis Problem	46
Thought Experiment: A Complement to Epidemiology?	47
Implications in the Search for Understanding, Control, and Prevention of Error Today	47
In the Research Domain	48
In the Control and Prevention Domains	49
Conclusions: Ensuing State of the Human Error Domain Today	49
References	51
3 Error and Harm in Health Sciences: Defining and Classifying Human Error and Its Consequences in Clinical and Community Settings	57
Executive Summary	57
Thoughts to Think About	58
Introductory Comments	59
Overview of Our Understanding of Error Today	60

Overview of Approaches to Error in Medicine.....	61
Definitions of Medical Error, Associated Entities, Terms.....	62
Current Definitions of Medical Error and Medical Harm.....	63
Associated Entities, Terms, and Their Definitions	64
Critical Incident, Error, Harm: Comments on Current Terms Used in Medical Lathology.....	71
Variables and Their Taxonomy in the Medical Error Domain	73
Migration of Error Taxonomy from Industry to Health Sciences: An Example	74
Medical Error and Related Factors and Variables: Other Approaches	74
Taxonomy by Types, Circumstances and Conditions, Consequences, and Corrections of Medical Error.....	77
Slips and Mistake-Related Taxonomy.....	77
Clinical Factors and Specialty-Oriented Taxonomies	80
Exhaustive and Multi-Axial Taxonomies	81
Notes about Related Variables and Contributing and Mitigating Factors	83
Note about Related Variables.....	84
Note about Contributing and Mitigating Factors.....	84
Conclusions: Implications of Definitions and Taxonomy for Research and Management of the Medical Error Domain.....	85
References.....	88
4 Describing Medical Error and Harm: Their Occurrence and Nature in Clinical and Community Settings	93
Executive Summary.....	93
Thoughts to Think About	94
Introductory Comments	95
Research, Knowledge Acquisition, and Intervention Strategies in the General Error Domain as Viewed by a Methodologically Minded Physician Epidemiologist.....	96
Descriptions of Single Cases, Small Sets of Error Cases, and Harm Cases	100
Choosing a Research or Intervention Subject.....	100
Reporting Unique, Infrequent, or Rare Cases beyond the Customary Methods of Clinical Practice: Case-Based Qualitative Research and Narrative Methods in the Area of Quality Improvement	103
Qualitative Research.....	103

Case Studies of Medical Error and Harm.....	105
Two Examples of Qualitative Research in Medicine and in the Domain of Medical Error.....	107
Reporting Single Cases of Error and Harm the “Medical” Way	108
Reporting Case Series of Error and Harm	110
Back to Epidemiology: What Happens Now? Occurrence Studies, Descriptive Epidemiology, Magnitude, and Distribution (“in Whom, Where, and When”) of the Error and Harm Problem.....	112
A Short Epidemiological Reminder.....	112
Incident and Incidence	113
Risk and Hazard.....	114
Error and Harm Reporting in Hospital Care.....	114
Error and Harm Reporting in Primary Care	115
Guidelines for Describing and Reporting Medical Error and Harm Occurrence	116
Conclusion.....	119
References.....	121
5 Analyzing Medical Error and Harm: Searching for Their Causes and Consequences	127
Executive Summary.....	127
Thoughts to Think About	128
Introductory Comments	130
Searching for “New” (Not Yet Known) Causes and Consequences of Medical Error and Harm: Etiological Research, Analytical Observational Epidemiology.....	131
Challenge of Deriving Cause–Effect Relationships from One or Very Few Observations: An A Priori Causal Attribution.....	139
Challenges of Limited Causal Proof or Causes Yet to Be Established.....	139
Is It Possible to Estimate and Analyze Probabilities of Rare Events?.....	140
Single-Error Event or Few Error Events Reporting	142
Offbeat Searches for Causes: Siding with Mainstream Epidemiological Experience	142
Root Cause Analysis in the Health Domain	143
Other Approaches to Cause–Effect Studies in Pathology through Observational Methods.....	149
Causal Trees	149
Probabilistic Risk Analysis.....	151

Significant-Event Analysis	152
Systems Analysis: Beyond Incident Reports and Root Cause Analysis.....	153
Experimental Demonstration of Medical Error and Harm Causes and Its Compromises and Alternatives.....	155
No Experimentation or Observational Research Is Feasible? Thought Experiment (“What If” Reasoning) to the Rescue	155
A Word about Modeling in Epidemiology and Lathology	156
Is the Mainstream Epidemiological Methodology of Causal Research Feasible in the Domain of Medical Error and Harm?	157
Conclusions	158
References.....	161
6 Flaws in Operator Reasoning and Decision Making Underlying Medical Error and Harm.....	167
Executive Summary.....	167
Thoughts to Think About	168
Introductory Comments	170
Note about Medical Error and Medical Harm.....	171
System Error versus Individual Human Error	172
Reminder regarding Some Fundamental Considerations	173
Flawed Argumentation and Reasoning as Sites and Generators of Error and Harm: Argumentation and Human Error and Harm Analysis from a Logical Perspective	175
Mistakes and Errors in Medical Lathology	178
Fallacies, Biases, and Cognitive Errors in Medical Lathology	179
Where and When Errors Occur: Cognitive Pathways as Sites of Error	181
Reviewing Diagnoses: Searching for Errors in the Clinimetric Process.....	182
Reviewing the Path from Diagnosis to Treatment Decisions and Orders.....	188
Reviewing Decisions as Sources of Error and Harm	188
Reviewing Actions as Sources of Error and Harm	190
Obtaining Results and Evaluating Their Impact.....	192
Errors in Making Prognoses	193
Follow-up, Surveillance, Forecasting-Related Errors	194
Conclusions	195
References.....	199

7	Prevention, Intervention, and Control of Medical Error and Harm: Clinical Epidemiological Considerations of Actions and Their Evaluation	203
	Executive Summary	203
	Thoughts to Think About	204
	Introductory Comments, Interventions in the Medical Error Domain	206
	Basic Definitions, Concepts, and Strategies of Intervention in Lathology.....	207
	Two Complementary Strategies: Human Error and System Failures	209
	Evaluation of Activities in Lathology	210
	Control of Medical Error and Harm.....	211
	Prevention of Medical Error and Harm	211
	Protection of Freedom from Medical Error and Harm	212
	Promotion of Freedom from Medical Error and Harm.....	212
	Basic Angles of Evaluation in Lathology: Structure, Process, Outcomes, and Other Subjects to Evaluate.....	212
	What Should Be Evaluated at the Individual Level: Knowledge, Attitudes, and Skills.....	213
	Experimental, Quasi-Experimental, and Nonexperimental Evaluation of Interventions to Understand and Better Control Medical Error and Harm Problems.....	215
	Randomized or Otherwise Controlled Clinical Trials	216
	Natural Experiment.....	217
	Before–After Studies.....	219
	Case Studies	220
	Healthcare Failure Mode and Effect Analysis (HFMEA)	221
	Systematic Reviews of Evidence.....	225
	Conclusions and Recommendations	225
	References.....	227
8	Taking Medical Error and Harm to Court: Contributions and Expectations of Physicians in Tort Litigation and Legal Decision Making	231
	Executive Summary	231
	Thoughts to Think About	232
	Introductory Comments	234
	Medical, Surgical, and Public Health Malpractice Claims and Litigation	237
	Medical and Surgical Malpractice	237

Public Health Malpractice	238
Language of Medicine and Law	239
General Philosophy and Strategies of Medicine and Law	241
Law Process and Its Stages	241
Happenings and Events before the Trial	241
At the Trial	257
After the Trial.....	258
Cause–Effect Relationships in Medicine and Law	258
Physicians’ Roles in the Judicial Search for Causes	260
Is the Causal Link under Review Strong and Specific Enough?.....	262
What Is Sufficient and Best Proof for Physicians and Lawyers?	262
What Do Physicians Think?	262
What Do Lawyers Think?	263
Disease versus Individual-Case Causes: Error as an Entity (in General) and in Specific Cases	265
Litigating the Argumentative Way	266
Disclosure of Medical Errors: Working in Law and Epidemiology with What Is Available.....	268
A Difficult Mix: Medicine, Ethics, and Law	270
Conclusions	271
References.....	273
Conclusions	279
A Brief and (Hopefully) Harmonized Glossary	289
Appendix A: List of Cognitive Biases.....	309
Appendix B: List of Fallacies.....	319
Appendix C: Medical Error and Harm–Related Case Report.....	329
About the Author	333
Index	335

It is human to err; and the only fatal and deadly error, among all errors, is denying that we have ever erred.

—G. K. Chesterton, 1874–1936

To err is human—but it feels divine.

—Mac West, 1893–1980 (attributed)
