

CONTENTS

1 Biophysics and its importance for medicine (I. Hrazdira)	9
2 The structure of living matter (V. Mornstein)	11
2.1 A recapitulation of quantum and nuclear physics	11
2.1.1 The sub-molecular structure of matter.....	11
2.1.1.1 The four fundamental interactions.....	11
2.1.1.2 Elementary particles of matter.....	12
2.1.1.3 The quantum properties of particles and their consequences.....	13
2.1.2 General properties of atoms.....	15
2.1.2.1 The electron shell of the atom.....	15
2.1.2.2 The atomic nucleus and its properties.....	18
2.1.3 Radioactivity and ionizing radiation.....	20
2.1.3.1 Radioactive decay types.....	20
2.1.3.2 The laws of radioactive decay.....	22
2.1.3.3 Interaction of ionizing radiation with matter.....	24
2.1.4 Units used to measure ionizing radiation.....	28
2.2 An introduction to molecular biophysics	29
2.2.1 Physico-chemical properties of molecules and their structure.....	29
2.2.1.1 Strong interactions between atoms – chemical bonds.....	29
2.2.1.2 Weak chemical interactions.....	31
2.2.1.3 Cohesive forces and liquid viscosity.....	32
2.2.2 Basic properties of water.....	33
2.2.2.1 Water and its properties.....	33
2.2.2.2 The function of water in organisms.....	34
2.2.3 Biopolymers and their structure.....	35
2.2.3.1 Structure of nucleic acids.....	35
2.2.3.2 Protein structures and their modifications.....	36
2.2.3.3 Overview of the methods of studying biopolymer structures.....	39
2.2.4 Dispersion systems and their properties.....	41
2.2.4.1 Types of dispersion systems.....	41
2.2.4.2 Colloidal dispersions and their physical properties.....	43
2.2.4.3 Methods of analyzing colloids and some macroheterogeneous systems.....	44
3 An introduction to thermodynamics and bioenergetics (V. Mornstein)	48
3.1 Basic concepts and laws of equilibrium thermodynamics	48
3.1.1 Basic properties of thermodynamic systems.....	48
3.1.2 Work of the thermodynamic system. Temperature and heat.....	49
3.1.3 Equations of state and basic processes in gases.....	51
3.1.4 The laws of thermodynamics.....	53
3.1.5 Thermodynamic potentials.....	55
3.1.6 Chemical potential.....	57
3.1.7 Chemical equilibrium and chemical work.....	58
3.2 Interpretation of some theoretical aspects of statistical physics	60
3.3 Application of the theoretical aspects of thermodynamics	64
3.3.1 Osmotic pressure.....	64
3.3.2 Phases of matter and phase equilibria.....	66
3.3.3 Surface and adsorption phenomena.....	70
3.3.4 Galvanic cell.....	72
3.3.5 Resting membrane voltage (potential).....	74
3.3.5.1 The Nernst equation for resting membrane voltage.....	74
3.3.5.2. Donnan's equilibrium.....	76
3.4 An outline of the thermodynamics of living systems	77
3.4.1 Entropy production and the stationary state.....	77
3.4.2 Examples of non-equilibrium thermodynamic processes.....	79
3.4.2.1 Diffusion.....	79

3.4.2.2. The Goldman equation (resting membrane voltage)	80
3.4.3 Nonlinear thermodynamics and dissipative structures	81
3.5. Energetic processes in living systems	83
3.5.1 Sources and conversions of energy in living systems	84
3.5.2 Energy consumption in living systems	85
4 Mechanical properties of living systems (I. Hrazdira and J. Škorpíková)	87
4.1 Basic concepts of mechanics	87
4.1.1 Mechanics of solids (J. Škorpíková)	87
4.1.2 Biomechanics	90
4.1.3 Classification of substances by mechanical properties	91
4.2 Structure and mechanical properties of cells	92
4.2.1 Structure of eukaryotic cells	92
4.2.2 Static mechanical properties	93
4.2.3 Dynamic properties	94
4.3 Mechanical properties of multi-cellular systems	96
4.3.1 Mechanical properties of teeth	96
4.3.2 Mechanical properties of the supportive-locomotor system	96
4.3.2.1 Statics and kinematics of bones and joints	96
4.3.2.2 Biomechanics of muscle contraction	98
4.3.3 Biomechanics of the cardiovascular system	99
4.3.3.1 Heart as a pump	99
4.3.3.2 Physical laws of flow	100
4.3.3.3 Blood flow	101
4.3.3.4 Mechanical properties of blood vessels	103
4.3.3.5 Blood flow in capillaries	105
4.3.3.6 Mechanical properties of blood	106
4.3.4 Biomechanics of breathing	106
4.3.4.1 Mechanics of breathing	106
4.3.4.2 Breathing resistance	107
4.3.4.3 Respiratory volumes and capacities	108
4.3.4.4 Mechanism of gas exchange between external and internal environment	109
4.3.5 Human voice and its properties	110
4.3.5.1 Origin of human voice	110
4.3.5.2 Acoustic composition of human speech	110
4.3.6 Biophysics of the urinary system	111
4.3.6.1 Glomerular filtration	112
4.3.6.2 Biophysical functions of the tubules	113
4.3.7 Biomechanics of the digestive system	113
5 Electrical phenomena and living systems (I. Hrazdira, V. Mornstein and J. Škorpíková)	116
5.1 Basic concepts and principles of electricity (J. Škorpíková)	116
5.1.1 Electric field	116
5.1.2 Electric current	118
5.1.3 Work and electric power of constant current	120
5.1.4 Magnetic field	120
5.2 Electrical phenomena in cells (V. Mornstein)	121
5.2.1 Resting membrane potential (voltage)	121
5.2.1.1 Measurement of the membrane potential	122
5.2.2.2 Origin of the action potential	123
5.2.3 Propagation of the action potential	124
5.2.4 Synaptic transfer of the action potential	125
5.2.4.1. Basic function of the synapse	125
5.2.4.2 Excitatory and inhibitory synapses	126
5.2.4.3 Summation of postsynaptic potentials and the origin of the action potential	127
5.2.5 Modelling electric properties of the cell membrane	127
5.3 Electric properties of tissues (I. Hrazdira)	128
5.3.1 Conduction of electric current through tissues	128

5.3.2 Electrical excitability	129
5.3.3 Passive electric properties	131
6 General characteristics of sensory perception (I. Hrazdira)	133
6.1 Sensory receptor classification	133
6.2 The transducing function of sensory receptors	134
6.3 The biophysical relationship between stimulus and sensation	135
6.4 The biophysics of perceiving chemical impulses	136
6.5 The structure and function of smell and taste receptors	137
7 The biophysics of perception of acoustic stimuli (I. Hrazdira)	139
7.1 The basic concepts of acoustics	139
7.2 Loudness, hearing field	140
7.3 The biophysical function of the ear	141
7.3.1 The mechanism of conveying acoustic signals	141
7.3.2 The mechanism of receiving and analyzing acoustic signals	143
7.3.3 Electrical phenomena related to sound reception	145
7.4 The biophysical function of the vestibular apparatus	146
7.5 Correction of hearing deficiency	147
7.5.1 The physical principles of examining hearing deficiencies	147
7.5.2 The principles for correcting hearing deficiencies	148
8 Reception and processing of optical stimuli (I. Hrazdira and J. Škorpíková)	149
8.1 Light – physical properties and sources (J. Škorpíková)	149
8.2 Optical properties of the eye	154
8.2.1 The structure of the eyeball and the optical properties of its media	154
8.2.2 Accommodation	156
8.2.3 Spherical ametropia	157
8.2.4 Aspherical ametropia	158
8.3 The mechanism of perceiving light stimuli	158
8.3.1 Structure of the retina	158
8.3.2 Vision	160
8.3.3 Colour vision and its disorders	162
8.3.4 Electrical phenomena in the retina	164
8.4 Correction of the distortions of the optical system of the eye	165
8.4.1 Glasses	165
8.4.2 Contact lenses	166
8.4.3 Artificial intraocular lens	167
8.4.4 Retinal implants	167
9 The impact of physical factors on living systems (I. Hrazdira)	168
9.1 The impact of mechanical factors	168
9.1.1 The impact of pressure changes	168
9.1.2 The impact of velocity changes	170
9.1.3 The impact of mechanical forces	171
9.2 The impact of acoustic factors	172
9.2.1 The impact of sound fields	172
9.2.2 Effects of ultrasound	173
9.3 The impact of meteorological conditions on the organism	174
9.4 Effects of electric currents	176
9.4.1 Electric current conduction through tissues	176
9.4.2 Electric shocks	177
9.5 Effects of magnetic fields	178
9.6 Effects of non-ionizing electromagnetic radiation	180
9.6.1 Physical characteristics of visible radiation. Laser light	180
9.6.2 Biological effects of optical radiation	182
9.7 Biological effects of ionizing radiation	184
9.7.1 Mechanisms of the effects	184
9.7.2 Biological effects of nuclear explosions	185
9.7.3 Protection against ionizing radiation	187

10 The human organism as a source of information (I. Hrazdira)	188
10.1 Biosignals and their classification	188
10.2 Biosignal processing	189
11 Measuring and recording diagnostic methods (I. Hrazdira and V. Mornstein)	191
11.1 Detection and measurement of mechanical quantities (V. Mornstein)	191
11.1.1 Pressure measurement (tonometry)	191
11.1.1.1 The transducers	192
11.1.1.2 Blood pressure	193
11.1.1.3 Other methods of pressure measurement in medicine	193
11.1.2 Measurement of mechanical work and power	193
11.1.3 Measurement of mechanical properties of liquids	194
11.1.4 Detection of low-frequency mechanical vibrations and sounds	195
11.2 Temperature measurement (I. Hrazdira)	195
11.2.1 Contact thermometric methods	196
11.2.1.1 Thermal volume expansion of liquids	196
11.2.1.2 Thermal expansion of metals	196
11.2.1.3 Changes in electrical properties of materials	196
11.2.2 Contactless temperature measurement	197
11.3 Electrodiagnostic methods (I. Hrazdira)	198
11.3.1 Electrodes	198
11.3.2 Processing of electrical signals	199
11.3.3 Detecting electrodiagnostic methods	200
11.3.3.1 Electrocardiography (EKG)	200
11.3.3.2 Electromyography (EMG)	203
11.3.3.3 Electroencephalography (EEG)	204
11.3.3.4 Electroretinography (ERG).....	205
11.3.3.5 Diagnostic value of magnetic signals	205
11.3.4 Stimulating electrodiagnostic methods	206
11.4 Electrochemical analytical methods (V. Mornstein)	207
11.4.1 Main kinds of electrodes	207
11.4.2 Conductometry	209
11.4.3 Polarography and voltametry	210
11.5 Optical laboratory methods (V. Mornstein)	211
11.5.1 Spectrophotometry	211
11.5.2 Polarimetry	213
11.5.3 Refractometry	214
11.6 Methods of microscopy (V. Mornstein)	216
11.6.1 Light microscopy	217
11.6.1.1 Scheme of a compound light microscope and properties of its optical system	217
11.6.1.2 Different kinds of compound microscopes	219
11.6.1.3 Special optical microscopes	220
11.6.1.4 Optical scanning microscopes	221
11.6.2 Electron microscopy	223
11.6.2.1 Transmission electron microscopy	223
11.6.2.2 Scanning electron microscopy (SEM)	224
11.6.3 Acoustic microscopy	225
11.7 Bone densitometry (I. Hrazdira)	225
11.7.1 X-ray densitometry	225
11.7.2 Ultrasound densitometry	226
11.8 Detection and dosimetry of ionising radiation (V. Mornstein)	226
11.8.1 Chemical and photochemical detectors and dosimeters	226
11.8.2 Electrical (ionisation) methods	227
11.8.3 Scintillation counters	230
11.9 Monitoring and telemetry (V. Mornstein)	231
12 Imaging diagnostic methods (I. Hrazdira and V. Mornstein)	233
12.1 General principles of diagnostic imaging (I. Hrazdira)	233

12.1.1 Algorithm of the imaging process	233
12.1.2 Assessment of image quality	233
12.2 Thermography (I. Hrazdira)	234
12.2.1 Contact thermography	234
12.2.2 The contactless thermography	235
12.2.3 Diagnostic importance of thermography	235
12.3 Ultrasound imaging and Doppler methods (I. Hrazdira)	236
12.3.1 Theoretical basis	236
12.3.2 The mechanism of ultrasound imaging	237
12.3.3 Doppler diagnostic methods	239
12.3.4 Ultrasound echo-contrast agents	241
12.3.5 Safety of ultrasound diagnostic procedures	242
12.3.6 Clinical value of ultrasonography	242
12.4 Endoscopic methods (I. Hrazdira)	243
12.4.1 Endoscopic mirrors	243
12.4.2 Endoscopes with rigid tubes	244
12.4.3 Fibre-optic endoscopes	244
12.5 X-ray imaging methods (V. Mornstein)	245
12.5.1 Principal scheme of an X-ray instrument	246
12.5.2 Origin of the X-ray image	247
12.5.2.1 Course of X-rays	247
12.5.2.2 Unsharpness of the image	248
12.5.2.3 Usage of contrast agents	249
12.5.3 The most important methods in X-ray diagnostics	249
12.5.3.1 Image intensifier	250
12.5.3.2 X-ray apparatuses used in dentistry	251
12.5.3.3 Xeroradiography	251
12.5.3.4 Classical (layer) tomography	251
12.5.4 Computed tomography (CT)	252
12.6 Radionuclide imaging and other diagnostic methods (V. Mornstein)	253
12.6.1 Tracing and radioimmunoassay	254
12.6.2 Scintillation counters and rectilinear scanners	254
12.6.3 Anger gamma-camera	255
12.6.4 SPECT and PET	255
12.7 Magnetic resonance imaging (V. Mornstein)	257
12.7.1 Nuclear magnetic resonance	257
12.7.2 The principle of image formation	259
12.7.3 Clinical value of MRI	261
13 Biophysical basis of non-invasive therapeutic methods (I. Hrazdira)	263
13.1 Therapy by means of mechanical energy	263
13.1.1 Ultrasound therapy	263
13.1.2 Lithotripsy by shock waves	263
13.1.3 Shock wave therapy	265
13.2 Electrotherapy	265
13.2.1 Applications of direct current (DC)	265
13.2.2 Applications of alternating current (AC) and electric impulses	266
13.3 Principles of magnetotherapy	268
13.3.1 Magnetic fields and their interaction with living systems	268
13.3.2 Main components of therapeutic effect of magnetic field	269
13.4 Methods of thermotherapy	269
13.4.1 Methods based on heat transfer	270
13.4.2 Methods based on heat production inside the body	271
13.5 Visible light as a therapeutic tool	272
13.5.1 Therapy with laser radiation	272
13.5.2 Therapy by polarised light	274
13.5.3 Photodynamic therapy	274

13.5.4 Therapeutic sources of ultraviolet radiation. 275

13.6 Physical principles of radiotherapy. 276

13.6.1 Basic phenomena 276

13.6.2. Sources of ionising radiation used in radiotherapy. 276

13.6.3 Methods of radiotherapy 277

14 Biophysical basis of invasive therapeutic methods and equipment assisting or replacing organ functions (I. Hrazdira) 279

14.1 Physical principles of modern surgical instruments 279

14.1.1 Electrosurgery 279

14.1.2 Lasers in surgery instrumentation 279

14.1.3 Ultrasound surgery. 280

14.1.4 Cryosurgery 281

14.1.5 Water jet as a surgical tool 281

14.2 Equipment assisting or replacing organ functions. 281

14.2.1 Breathing assist devices 282

14.2.2 Heart assist devices and artificial heart 282

14.2.3 Haemodialyser – an artificial kidney 283

14.2.4 Limb prostheses 284

14.2.5 Infusion pumps 285

15 Notes on biophysical principles and instrumentation in dental medicine (I. Hrazdira) 287

15.1 Mechanical properties of teeth. 287

15.2 Biocompatibility of materials used in dental medicine 287

15.2.1 General features of biocompatibility 287

15.2.2 Problems of biocompatibility in dental medicine 288

15.2.3 Basic characteristic of materials for dental prostheses 289

15.3 X-ray devices in dentistry. 292

15.4 Measurement of electrical excitability of dental pulp 293

15.5 Physical principles of main tools used in dentistry 293

15.5.1 Rotary instruments. 293

15.5.2 Lever tools 295

15.5.3 Ultrasound devices in dental medicine 296

15.6 Dental prostheses (dentures) 298

16 Healthcare informatics and overview of computer-literacy for medical students (A. Bourek) 300

16.1 Informatics as a science 300

16.2 The computer as a device for data sharing. 302

16.3 Networks 303

16.4 Information technology (processes and tools) applied in health and healthcare 318

16.4.1 Health, healthcare, medical informatics and telemedicine 318

16.4.2 Searching for health and healthcare related evidence based documents using the World Wide Web (WWW) . 321
