PREFACE	3
INTRODUCTION	5
I. ELEMENTARY EQUATIONS OF THE THEORY OF ELASTICITY	7
I.1 Coordinate systems and their transformation. Vector and tensor	7
I.1.1 Orthogonal transformation of coordinates	8
I.1.2 Transformation properties of vectors and tensors	8
I.2 Strain - displacement relationships	9
I.2.1 Strain - displacement relationships (Geometric equations)	10
Extension I: Matrix form of the components of strain tensor	11
I.2.2 Compatibility equations	11
I.3 State of stress. Static equations	12
I.3.1 Stress and the state of stress	12
I.3.2 Equations of equilibrium on an elementary tetrahedron	14
Extension IIa: Compact form of equations of equilibrium on elementary tetrahedron - stress tensor	15
I.3.3 Equations of equilibrium on an elementary cube. Static equations	16
Extension IIb: Equilibrium conditions on an elementary cube written in compact form	18
I.4 Stress - strain relationships. Constitutive equations	23
I.4.1 Stress - strain diagram	23
I.4.2 Mathematical description of the physical properties of the material.	
Strain energy	24
I.4.3 Generalized Hook's law	28
I.4.3.1 Extended Hook's law	28
I.4.3.2 Relationship between material constants	29

I.5 Two basic approaches when solving the boundary value problem of the theory of elasticity	33
II. ANALYSIS OF BARS	37
II.1 Introduction	37
II.1.1 Integral definition of internal forces	38
II.1.2 Differential equation of the equilibrium of bars	39
Extension III: Vector form of equations of the equilibrium of bars	40
II.2 Bending of bars	43
II.2.1 Kinematics of cross-sections	45
II.2.2 Normal stress developed in the bending of bars	46
II.2.2.1 Simple tension (compression)	48
II.2.2.2 Simple bending	49
II.2.2.3 General (three - dimensional) bending	51
II.2.2.4 Bending combined with tension (compression)	55
II.2.2.5 Cross-sectional core	58
II.2.3 Normal stress distribution in elastic - plastic stress state	61
II.2.3.1 Elastic, perfectly plastic tension - compression	62
II.2.3.2 Elastic - plastic bending	66
II.2.3.3 Bending with tension (compression)	74
II.2.4 The elastic curve	77
Extension IV: The elastic curve of bars undergoing large inelastic deformation	86
Extension V: Deflection of curved bars	88
II.2.5 Shearing stresses in bars under bending	91
II.2.5.1 Shearing stresses in beams with simple massive cross-sections	91
II.2.5.2 Shearing stresses in beams with variable cross-sections	94
Extension VI: Shearing stresses in partially plastified cross-sections	98
Extension VII: Effect of shear forces on the bending of beams	98
II.3 Free torsion of prismatic bars	101
II.3.1 Geometry of deformation and elementary equations of the theory of elasticity	101

II.3.2	Torsion of bars with circular cross-sections	102
II.3.3	Torsion of bars in the elastic - plastic stress state	107
II.3.4	Free torsion of bars of thin-walled open cross-sections	109
Extension VIII:	Free torsion of bars with massive cross-sections	111
Extension IX:	Free torsion of bars with thin-walled single-cell tubes	116
II.4	Bending and twisting of thin-walled beams (restrained warping)	119
II.4.1	Shear centre	120
II.4.2	Stresses in open sections	124
II.4.2.1	Cross-sectional warping	124
II.4.2.2	Normal stresses	128
II.4.2.3	Shearing stresses	128
II.4.3	Elastic curve of thin-walled open sections	132
