Preface to the Third Edition, xi

Preface to the First Edition, xiii

Acknowledgments, xv

## 1 Epidemiology Past and Present, 1

- 1.1 Epidemiology and its uses, 2
- 1.2 Evolving patterns of morbidity and mortality, 5
- 1.3 Selected historical figures and events, 8
- 1.4 Chapter summary, 30
  - Review questions, 31
  - References, 32

## 2 Causal Concepts, 36

- 2.1 Natural history of disease, 36
- 2.2 Variability in the expression of disease, 40
- 2.3 Causal models, 41
- 2.4 Causal inference, 48
  - Exercises, 58
  - Review questions, 61
  - References, 63

## 3 Epidemiologic Measures, 66

- 3.1 Measures of disease frequency, 67
- 3.2 Measures of association, 74
- 3.3 Measures of potential impact, 79
- 3.4 Rate adjustment, 82
  - Exercises, 90
  - Review questions, 98
  - References, 99
  - Addendum: additional mathematical details, 101

## 4 Descriptive Epidemiology, 104

- 4.1 Introduction, 104
- 4.2 Epidemiologic variables, 108
- 4.3 Ecological correlations, 116
  - Exercises, 121
  - Review questions, 123
  - References, 124

5 Introduction to Epidemiologic Study Design, 126

- 5.1 Etiologic research, 126
- 5.2 Ethical conduct of studies involving human subjects, 129
- 5.3 Selected study design elements, 130
- 5.4 Common types of epidemiologic studies, 137
  - Exercises, 138
  - Review questions, 140
  - References, 141

6 Experimental Studies, 142

- 6.1 Introduction, 142
- 6.2 Historical perspective, 144
- 6.3 General concepts, 146
- 6.4 Data analysis, 152
  - Exercises, 156
  - Review questions, 157
  - References, 157

7 Observational Cohort Studies, 159

- 7.1 Introduction, 159
- 7.2 Historical perspective, 161
- 7.3 Assembling and following a cohort, 163
- 7.4 Prospective, retrospective, and ambidirectional cohorts, 164
- 7.5 Addressing the potential for confounding, 165
- 7.6 Data analysis, 166
- 7.7 Historically important study: Wade Hampton Frost's birth cohorts, 170
  - Exercises, 174
  - Review questions, 177
  - References, 177

8 Case–Control Studies, 180

- 8.1 Introduction, 180
- 8.2 Identifying cases and controls, 182
- 8.3 Obtaining information on exposure, 185
- 8.4 Data analysis, 186
- 8.5 Statistical justifications of case–control odds ratio as relative risks, 193
  - Exercises, 194
  - Review questions, 198
  - References, 199

9 Error in Epidemiologic Research, 201

- 9.1 Introduction, 201
- 9.2 Random error (imprecision), 203
- 9.3 Systematic error (bias), 209
  - Exercises, 217
  - Review questions, 219
  - References, 220

- 10 Screening for Disease, 222
- 10.1 Introduction, 223
  - 10.2 Reliability (agreement), 224
  - 10.3 Validity, 228
    - Summary, 238
    - Exercises, 239
    - Review questions, 243
    - References, 243
  - 10.4 Chapter addendum (case study), 244
    - Further reading—screening for HIV, 248
    - Further reading—general concepts of screening, 248
    - Answers to case study: screening for antibodies to the human immunodeficiency virus, 249
- 11 The Infectious Disease Process, 255
- 11.1 The infectious disease process, 255
  - 11.2 Herd immunity, 265
    - Exercises, 267
    - Review questions, 268
    - References, 270
- 12 Outbreak Investigation, 271
- 12.1 Background, 272
  - 12.2 CDC prescribed investigatory steps, 273
    - Review questions, 282
    - References, 283
    - References—a drug–disease outbreak, 286
- 13 Confidence Intervals and  $p$ -Values, 302
- 13.1 Introduction, 303
  - 13.2 Confidence intervals, 304
  - 13.3  $p$ -Values, 312
  - 13.4 Minimum Bayes factors, 319
    - References, 322
- 14 Mantel–Haenszel Methods, 323
- 14.1 Ways to prevent confounding, 323
  - 14.2 Simpson’s paradox, 325
  - 14.3 Mantel–Haenszel methods for risk ratios, 325
  - 14.4 Mantel–Haenszel methods for other measures of association, 329
    - Exercise, 335
    - References, 335
- 15 Statistical Interaction: Effect Measure Modification, 337
- 15.1 Two types of interaction, 337
  - 15.2 Chi-square test for statistical, 340
  - 15.3 Strategy for stratified analysis, 342
