

CONTENTS

<u>CONTENTS</u>	4
<u>6. DIGITAL CONTROL</u>	7
6.1. INTRODUCTION	7
6.2. DIGITAL FEEDBACK CONTROL	7
6.3. IDEAL PID CONTROLLERS	9
6.4. REAL PID CONTROLLERS	10
6.5. PID CONTROL LAW FOR AUTOTUNING ALGORITHMS	11
6.6. PID CONTROLLER SETTINGS	12
6.7. PARAMETERS OF INDUSTRIAL PID CONTROLLERS	12
6.8. MICROPROCESSOR-BASED PID CONTROLLER PC96.P	14
6.8.1. <i>General description</i>	14
6.8.2. <i>Connections</i>	15
6.8.3. <i>Features</i>	15
6.8.4. <i>Front panel functions</i>	16
6.8.5. <i>Installation</i>	17
6.8.6. <i>First level parameter programming instructions</i>	17
6.8.7. <i>Second level parameter programming instructions</i>	18
6.8.8. <i>Parameters description</i>	19
6.8.9. <i>Malfunctions signalling</i>	24
6.9. ZEPADIG 10 CONTROLLER	25
6.9.1. <i>Application</i>	25
6.9.2. <i>Operation principle</i>	25
6.9.3. <i>Function description</i>	26
6.9.4. <i>Device control</i>	34
<u>7. LOGIC CONTROL</u>	36
7.1. PLC PROGRAMMING AND HARDWARE FUNDAMENTALS	36
7.1.1. <i>Introduction</i>	36
7.1.2. <i>The PLC's internal organisation program</i>	37
7.1.3. <i>Programming devices for PLCs</i>	37
7.1.4. <i>Data area structure</i>	38
7.2. PLC PROGRAMMING CONCEPTS	40
7.2.1. <i>PLC programming languages</i>	40
7.2.2. <i>Ladder diagram circuit presentation</i>	41
7.2.3. <i>Programming examples</i>	42
7.2.4. <i>Programming bracket-enclosed Boolean equations</i>	44
7.2.5. <i>Connecting "AND" blocks with logic "OR" using "OR LD"</i>	45
7.2.6. <i>Connecting "OR" blocks with logic "AND" using "AND LD"</i>	46
7.2.7. <i>END instruction</i>	46
7.2.8. <i>PLC programming</i>	46

7.3. PROGRAMMING BASIC LOGIC FUNCTIONS	47
7.3.1. "YES" function (Identity)	47
7.3.2. "NOT" function (Negation)	47
7.3.3. "AND" function (Conjunction)	48
7.3.4. "OR" function (Disjunction)	48
7.3.5. "INHIBITION" function (Impedance)	48
7.3.6. "EXCLUSIVE OR" function (Antivalence)	49
7.3.7. "NAND" function (Exclusion)	49
7.3.8. "NOR" function (Rejection)	49
7.3.9. "INHIBITED AND" function (Nonjunction)	50
7.3.10. "INHIBITED OR" function (Nisjunction)	50
7.4. PLC BISTABLE AND MONOSTABLE OUTPUT RELAYS	51
7.4.1. RS flip-flop output relays	51
7.4.2. KEEP function	52
7.4.3. Latching relays	53
7.4.4. T flip-flop output relays	53
7.4.5. JK flip-flop output relays	54
7.4.6. D flip-flop output relays	55
7.4.7. Miscellaneous internal outputs	56
7.5. TIMERS AND COUNTERS IN PLCs	56
7.5.1. Timer concept	56
7.5.2. Timer programming instructions	57
7.5.3. "ON" - DELAY and "OFF" - DELAY timers	59
7.5.4. Timers and PLC power failure	60
7.5.5. Cascading timers for extra-long time	60
7.5.6. High-speed timers	61
7.5.7. Differentiation function (edge-pulse timer)	61
7.5.8. Counter concept	63
7.5.9. Retentive timers	65
7.5.10. Extra-long timers	65
7.5.11. Cascaded counters	66
7.5.12. Reversible counters	67
7.5.13. Application examples	68
7.6. BUILDING BLOCKS FOR PLC PROGRAMMING	71
7.6.1. A before B circuit	71
7.6.2. One-shot signal	72
7.6.3. Variable flicker signal blocks	73
7.6.4. ON/OFF DELAY block	74
7.6.5. Shift register	74
7.6.6. Multiple word shift register	76
7.6.7. Simultaneous event signalling block	76
7.6.8. Automatic actuator reversal circuit block	77
7.6.9. Building blocks application circuits	78
7.7. SEQUENTIAL TASKS DESIGN	80
7.7.1. Step-action diagram	81
7.7.2. Methods for sequential circuit design	83
7.7.3. Step-counter algorithms for sequential circuit design	84

<u>8. FUZZY LOGIC CONTROL</u>	87
8.1. INTRODUCTION TO FUZZY LOGIC	87
8.2. FUZZY LOGIC IN THE C200H - FZ001	91
8.3. DEVELOPING THE KNOWLEDGE BASE	94
8.4. FUZZY LOGIC - EXAMPLES	99
8.4.1. <i>Example 1 - Pressure and temperature control using fuzzy logic</i>	99
8.4.2. <i>Example 2 - Intelligent vehicle active suspension control system</i>	102
8.4.3. <i>Example 3 - Fuzzy rule-based DC motor speed control</i>	105
8.4.4. <i>Example 4 - Conveyor belt control system</i>	109
