

CONTENTS

Preface	2
List of symbols	3
Chapter 1. Number sets	4
Chapter 2. Sequences and series	7
2.1 Supremum and infimum	7
2.2 Fundamental problems on sequences	8
2.3 Limits of sequences	9
2.4 Series of numbers and functions	10
Chapter 3. Linear algebra	14
3.1 Vector spaces	14
3.2 Matrices	15
3.3 Systems of linear algebraic equations	17
3.4 Eigenvalues and eigenvectors	19
3.5 Determinants	20
Chapter 4. Functions of one variable	24
4.1 Fundamentals	24
4.2 Continuity	26
4.3 Limits of functions	28
Chapter 5. Differential calculus of one variable	32
5.1 Derivatives	32
5.2 Geometrical and physical meaning of derivatives	33
5.3 Differentials	35
5.4 Applications of fundamental theorems of differential calculus	36
5.5 Taylor's theorem	37
5.6 Investigation of functions for their properties	37
5.7 Global extremes	40
5.8 Approximate solutions of equation $f(x) = 0$	43
Chapter 6. Integral calculus of one variable	51
6.1 Indefinite integral	51
6.2 Definite integral	54
6.3 Improper integrals	55
6.4 Applications to integral calculus	56
Chapter 7. Functions of more variables	61
7.1 Fundamentals	61
7.2 Differential calculus of more variables	62
Chapter 8. Ordinary differential equations	70
8.1 Fundamentals and general concepts	70
8.2 Differential equations of the 1st order	70
8.3 Linear differential equations of higher orders	72
References	75
