

PREFACE	3
INTRODUCTION	5
1. VARIATIONAL PRINCIPLES AND PRINCIPLES OF VIRTUAL WORK	7
1. 1 Introductory topics	7
1. 1. 1 The small displacement theory of elasticity	7
1. 1. 2 Extremum of functionals	9
1. 2 Principles of virtual work	11
1. 2. 1 Principle of virtual displacements	11
1. 2. 2 Principle of virtual forces - complementary virtual work	12
1. 3 Classical variational principles	16
1. 4 Indirect application of variational principles	23
1. 4. 1 Elementary beam theory	23
1. 4. 2 Saint-Venant theory or free torsion of bars	28
1. 4. 3 The beam theory with the effect of transverse shear deformation	30
1. 4. 4 Solution of laminated beams	32
1. 5 Direct application of variational principles	34
1. 5. 1 Summary of potential energy of deformation and complementary energy of stress	34
1. 5. 2 Ritz method	36
1. 5. 3 Galerkin-Bubnov method	38
2. STABILITY OF BEAMS	46
2. 1 Geometric method	47
2. 1. 1 Other cases of support	50
2. 1. 2 The length of buckling	55
2. 1. 3 The buckling in standards	56
2. 2 Energetic methods	57
2. 2. 1 Energy criterion of stability by Washizu	57
2. 2. 2 Geometrical explanation of energetic method	59
2. 2. 3 Variational solution	61

2.3	Buckling of another selected structures	68
2.3.1	Stability of discrete systems	68
2.3.2	Combination of compression and bending	71
3.	<b>TWO-DIMENSIONAL PROBLEMS</b>	75
3.1	Plane stress state	76
3.2	Plane strain state	77
3.3	Generalized plane strain for axisymmetric problem	78
3.4	Analysis of the stress behavior at a point of a 2D structure	80
3.5	Theory of plates	86
3.5.1	Kirchhoff hypothesis	86
3.5.2	Stretching and bending of a plate	89
3.5.3	Principle of minimum potential energy and its transformation for the stretching of a plate	94
3.5.4	Principle of minimum potential energy and its transformation for the bending of a plate	95
3.5.5	Bending of a thin plate including the effect of transverse shear deformation	96
3.6	Pure bending of Kirchhoff plates	102
3.6.1	Boundary conditions in practical examples	103
3.6.2	Problems of a plate in polar coordinates	108
3.6.3	Axisymmetric problem	110
3.6.4	Fourier series	112
3.6.5	Folded plate problem	115
3.6.6	Finite difference method	116
3.6.7	Energetic methods	125
3.7	Stretching of plates	129
3.7.1	Finite difference method	133
3.7.2	Polar coordinates	138
3.7.3	Stress distribution in an annular plate with cylindrical anisotropy	139
3.7.4	Stress distribution in a composite curvilinear anisotropic ring	141
3.7.5	Fourier method	142
3.7.6	Energetic methods	146
