Preface to the Third Edition, vii

Preface to the Second Edition, ix

Preface to the First Edition, xi

Preliminaries, 1

Part 1: Preliminaries, 1

Part 2: Algebraic Structures, 17

Part I—Basic Linear Algebra, 33

1 Vector Spaces, 35

Vector Spaces, 35

Subspaces, 37

Direct Sums, 40

Spanning Sets and Linear Independence, 44

The Dimension of a Vector Space, 48

Ordered Bases and Coordinate Matrices, 51

The Row and Column Spaces of a Matrix, 52

The Complexification of a Real Vector Space, 53

Exercises, 55

2 Linear Transformations, 59

Linear Transformations, 59

The Kernel and Image of a Linear Transformation, 61

Isomorphisms, 62

The Rank Plus Nullity Theorem, 63

Linear Transformations from F^n to F^m , 64

Change of Basis Matrices, 65

The Matrix of a Linear Transformation, 66

Change of Bases for Linear Transformations, 68

Equivalence of Matrices, 68

Similarity of Matrices, 70

Similarity of Operators, 71

Invariant Subspaces and Reducing Pairs, 72

Projection Operators, 73

- Topological Vector Spaces, 79
- Linear Operators on $V^{\mathbb{C}}$, 82
- Exercises, 83
- 3 The Isomorphism Theorems, 87**
 - Quotient Spaces, 87
 - The Universal Property of Quotients and the First Isomorphism Theorem, 90
 - Quotient Spaces, Complements and Codimension, 92
 - Additional Isomorphism Theorems, 93
 - Linear Functionals, 94
 - Dual Bases, 96
 - Reflexivity, 100
 - Annihilators, 101
 - Operator Adjoints, 104
 - Exercises, 106
- 4 Modules I: Basic Properties, 109**
 - Motivation, 109
 - Modules, 109
 - Submodules, 111
 - Spanning Sets, 112
 - Linear Independence, 114
 - Torsion Elements, 115
 - Annihilators, 115
 - Free Modules, 116
 - Homomorphisms, 117
 - Quotient Modules, 117
 - The Correspondence and Isomorphism Theorems, 118
 - Direct Sums and Direct Summands, 119
 - Modules Are Not as Nice as Vector Spaces, 124
 - Exercises, 125
- 5 Modules II: Free and Noetherian Modules, 127**
 - The Rank of a Free Module, 127
 - Free Modules and Epimorphisms, 132
 - Noetherian Modules, 132
 - The Hilbert Basis Theorem, 136
 - Exercises, 137
- 6 Modules over a Principal Ideal Domain, 139**
 - Annihilators and Orders, 139
 - Cyclic Modules, 140
 - Free Modules over a Principal Ideal Domain, 142
 - Torsion-Free and Free Modules, 145
 - The Primary Cyclic Decomposition Theorem, 146
 - The Invariant Factor Decomposition, 156
 - Characterizing Cyclic Modules, 158

- Indecomposable Modules, 158
Exercises, 159
- 7 The Structure of a Linear Operator, 163**
The Module Associated with a Linear Operator, 164
The Primary Cyclic Decomposition of V_τ , 167
The Characteristic Polynomial, 170
Cyclic and Indecomposable Modules, 171
The Big Picture, 174
The Rational Canonical Form, 176
Exercises, 182
- 8 Eigenvalues and Eigenvectors, 185**
Eigenvalues and Eigenvectors, 185
Geometric and Algebraic Multiplicities, 189
The Jordan Canonical Form, 190
Triangularizability and Schur's Theorem, 192
Diagonalizable Operators, 196
Exercises, 198
- 9 Real and Complex Inner Product Spaces, 205**
Norm and Distance, 208
Isometries, 210
Orthogonality, 211
Orthogonal and Orthonormal Sets, 212
The Projection Theorem and Best Approximations, 219
The Riesz Representation Theorem, 221
Exercises, 223
- 10 Structure Theory for Normal Operators, 227**
The Adjoint of a Linear Operator, 227
Orthogonal Projections, 231
Unitary Diagonalizability, 233
Normal Operators, 234
Special Types of Normal Operators, 238
Self-Adjoint Operators, 239
Unitary Operators and Isometries, 240
The Structure of Normal Operators, 245
Functional Calculus, 247
Positive Operators, 250
The Polar Decomposition of an Operator, 252
Exercises, 254
- Part II—Topics, 257**
- 11 Metric Vector Spaces: The Theory of Bilinear Forms, 259**
Symmetric, Skew-Symmetric and Alternate Forms, 259
The Matrix of a Bilinear Form, 261

- Quadratic Forms, 264
- Orthogonality, 265
- Linear Functionals, 268
- Orthogonal Complements and Orthogonal Direct Sums, 269
- Isometries, 271
- Hyperbolic Spaces, 272
- Nonsingular Completions of a Subspace, 273
- The Witt Theorems: A Preview, 275
- The Classification Problem for Metric Vector Spaces, 276
- Symplectic Geometry, 277
- The Structure of Orthogonal Geometries: Orthogonal Bases, 282
- The Classification of Orthogonal Geometries:
 - Canonical Forms, 285
- The Orthogonal Group, 291
- The Witt Theorems for Orthogonal Geometries, 294
- Maximal Hyperbolic Subspaces of an Orthogonal Geometry, 295
- Exercises, 297
- 12 Metric Spaces, 301**
 - The Definition, 301
 - Open and Closed Sets, 304
 - Convergence in a Metric Space, 305
 - The Closure of a Set, 306
 - Dense Subsets, 308
 - Continuity, 310
 - Completeness, 311
 - Isometries, 315
 - The Completion of a Metric Space, 316
 - Exercises, 321
- 13 Hilbert Spaces, 325**
 - A Brief Review, 325
 - Hilbert Spaces, 326
 - Infinite Series, 330
 - An Approximation Problem, 331
 - Hilbert Bases, 335
 - Fourier Expansions, 336
 - A Characterization of Hilbert Bases, 346
 - Hilbert Dimension, 346
 - A Characterization of Hilbert Spaces, 347
 - The Riesz Representation Theorem, 349
 - Exercises, 352
- 14 Tensor Products, 355**
 - Universality, 355
 - Bilinear Maps, 359
 - Tensor Products, 361

- When Is a Tensor Product Zero?, 367
- Coordinate Matrices and Rank, 368
- Characterizing Vectors in a Tensor Product, 371
- Defining Linear Transformations on a Tensor Product, 374
- The Tensor Product of Linear Transformations, 375
- Change of Base Field, 379
- Multilinear Maps and Iterated Tensor Products, 382
- Tensor Spaces, 385
- Special Multilinear Maps, 390
- Graded Algebras, 392
- The Symmetric and Antisymmetric
Tensor Algebras, 392
- The Determinant, 403
- Exercises, 406
- 15 Positive Solutions to Linear Systems:
Convexity and Separation, 411**
 - Convex, Closed and Compact Sets, 413
 - Convex Hulls, 414
 - Linear and Affine Hyperplanes, 416
 - Separation, 418
 - Exercises, 423
- 16 Affine Geometry, 427**
 - Affine Geometry, 427
 - Affine Combinations, 428
 - Affine Hulls, 430
 - The Lattice of Flats, 431
 - Affine Independence, 433
 - Affine Transformations, 435
 - Projective Geometry, 437
 - Exercises, 440
- 17 Singular Values and the Moore–Penrose Inverse, 443**
 - Singular Values, 443
 - The Moore–Penrose Generalized Inverse, 446
 - Least Squares Approximation, 448
 - Exercises, 449
- 18 An Introduction to Algebras, 451**
 - Motivation, 451
 - Associative Algebras, 451
 - Division Algebras, 462
 - Exercises, 469
- 19 The Umbral Calculus, 471**
 - Formal Power Series, 471
 - The Umbral Algebra, 473

Formal Power Series as Linear Operators, 477
 Sheffer Sequences, 480
 Examples of Sheffer Sequences, 488
 Umbral Operators and Umbral Shifts, 490
 Continuous Operators on the Umbral Algebra, 492
 Operator Adjoints, 493
 Umbral Operators and Automorphisms
 of the Umbral Algebra, 494
 Umbral Shifts and Derivations of the Umbral Algebra, 499
 The Transfer Formulas, 504
 A Final Remark, 505
 Exercises, 506

References, 507

Index of Symbols, 513

Index, 515
