

CONTENTS

Lecture 1: Introduction to Statistics	1 - 22
Lecture 2: Analysis of Random Variation - Distributions of a Single Variable	23 - 46
Lecture 3: Exploratory Data Analysis	47 - 68
Lecture 4: Probability Theory	69 - 83
Lecture 5: Random Variables	84 - 103
Lecture 6: Discrete Probability Distributions	104 - 130
Lecture 7: Theoretical Probability Distributions for Continuous Random Variables. Poisson Process and Failure Time Process	131 - 150
Lecture 8: The Error Process and Normal Distribution	151 - 174
Lecture 9: Introduction to Statistical Inference and The Method of Hypothesis Testing	175 - 203
Lecture 10: Point and Interval Estimation	204 - 220
Lecture 11: One Factor Analysis of Variance	221 - 241
Lecture 12: Experimental Designs	242 - 251
Lecture 13: Linear Statistical Models - Simple Linear Regression	252 - 273
Lecture 14: Linear Statistical Models - Multiple Linear Regression	274 - 298
