Preface	3
Contents	4
1 Introduction (Hrazdira)	8
1.1 The human organism as a source of information	8
1.2 Biosignals and their classification	8
1.3 Biosignal processing	10
2 Measuring and recording diagnostic methods	12
2.1 Detection and measurement of mechanical quantities (Mornstein)	12
2.1.1 Pressure measurement (tonometry)	12
2.1.1.1 The transducers	
2.1.1.2 Blood pressure	
2.1.1.3 Other methods of pressure measurement in medicine	
2.1.2 Measurement of mechanical work and power	14
2.1.3 Measurement of mechanical properties of liquids	15
2.1.4 Detection of low-frequency mechanical vibrations and sounds	16
2.2 Temperature measurement (Hrazdira)	16
2.2.1 Contact thermometric methods	17
2.2.1.1 Thermal volume expansion of liquids.	
2.2.1.2 Thermal expansion of metals.	
2.2.1.2 Changes in electrical properties of matters	
2.2.2 Contactless temperature measurement.	19
2.3 Electrodiagnostic methods (Hrazdira)	19
2.3.1 Electrodes	20
2.3.2 Processing of electrical signals	21
2.3.3 Active electrodiagnostic methods	22
2.3.3.1 Electrocardiography (EKG)	
2.3.3.2 Electromyography (EMG)	
2.3.3.3 Electroencephalography (EEG)	
2.3.3.4 Electroretinography (ERG)	
2.3.3.5 Diagnostic exploitation of magnetic signals	
2.3.4 Passive electrodiagnostic methods	27
2.4 Electrochemical analytical methods (Mornstein)	28
2.4.1 Main kinds of electrodes	28
2.4.2 Conductometry	30
2.4.3 Polarography and voltametry	31
2.5 Optical laboratory methods (Mornstein)	32
2.5.1. Spectrophotometry	32
2.5.2 Polarimetry	35
2.5.3 Refractometry	36
2.6 Methods of microscopy (Mornstein)	38

2.6.1 Light microscopy	39
2.6.1.1 Scheme of a compound light microscope and properties of its optical system	
2.6.1.2 Different kinds of compound microscopes	
2.6.1.3 Special optical microscopes	
2.6.1.4 Optical scanning microscopes	
2.6.2 Electron microscopy	45
2.6.2.1 Transmission electron microscopy	
2.6.2.2 Scanning electron microscopy (SEM)	
2.6.3 Acoustic microscopy	47
2.7 Bone densitometry (Hrazdira)	47
2.7.1 X-ray densitometry	48
2.7.2 Ultrasound densitometry	48
2.8. Detection and dosimetry of ionising radiation (Mornstein)	48
2.8.1 Chemical and photochemical detectors and dosimeters	49
2.8.2 Electrical (ionisation) methods	50
2.8.3 Scintillation counters	52
2.9 Monitoring and telemetry (Mornstein)	54
3 Imaging diagnostic methods	56
3.1 General principles of diagnostic imaging (Hrazdira)	56
3.1.1 Algorithm of the imaging process	56
3.1.2 Assessment of image quality	57
3.2 Thermography (Hrazdira)	57
3.2.1 Contact thermography	57
3.2.2 The contactless thermography	58
3.2.3 Diagnostic importance of thermography	59
3.3 Ultrasound imaging and Doppler methods (Hrazdira)	59
3.3.1 Theoretical assumptions	59
3.3.2 The mechanism of ultrasound imaging	61
3.3.3 Doppler diagnostic methods	63
3.3.4 Ultrasound contrast agents	65
3.3.5 Safety of ultrasound diagnostic procedures	66
3.3.6 Clinical value of ultrasonography	66
3.4 Endoscopic methods (Hrazdira)	66
3.4.1 Endoscopic mirrors	67
3.4.2 Endoscopes with rigid tubes	67
3.4.3 Fibre-optic endoscopes	68
3.5 X-ray imaging methods (Mornstein)	69
3.5.1 Principal scheme of an x-ray instrument	70
3.5.2 Origin of the x-ray image	71
3.5.2.1 Course of x-rays	
3.5.2.2 Unsharpness of the image	
3.5.2.3 Usage of contrast agents	

3.5.3	The most important methods and instruments in x-ray diagnostics	74
3.5.3.1	Image intensifier	
3.5.3.2	X-ray devices used in dentistry	
3.5.3.3	Xeroradiography	
3.5.3.4	Classical (layer) tomography	
3.5.4	Computed tomography (CT)	77
3.6	Radionuclide imaging and other diagnostic methods (Mornstein)	79
3.6.1	Tracing and radioimmunoassay	79
3.6.2	Scintillation counters and rectilinear scanners	80
3.6.3	Anger gamma-camera	81
3.6.4	SPECT and PET	81
3.7	Magnetic resonance imaging (Mornstein)	83
3.7.1	Nuclear magnetic resonance	83
3.7.2	The principle of image formation	86
3.7.3	Clinical importance of MRI	87
4	Biophysical basis of non-invasive therapeutic methods (Hrazdira)	89
4.1	Therapy by means of mechanical energy	89
4.1.1	Ultrasound therapy	89
4.1.2	Lithotripsy by shock waves	90
4.1.3	Shock wave therapy	91
4.2	Electrotherapy	91
4.2.1	Applications of direct current (DC)	92
4.2.2	Applications of alternating current (AC) and electric impulses	92
4.3	Principles of magnetotherapy	94
4.3.1	Magnetic fields and their interaction with living systems	94
4.3.2	Main components of therapeutic effect of magnetic field	95
4.4	Methods of thermotherapy	96
4.4.1	Methods based on heat transfer	96
4.4.2	Methods based on heat production inside the body	97
4.5	Visible light as a therapeutic tool	99
4.5.1	Therapy with laser radiation	99
4.5.2	Therapy by polarised light	101
4.5.3	Photodynamic therapy	102
4.5.4	Therapeutic sources of ultraviolet radiation	102
4.6	Physical principles of radiotherapy	103
4.6.1	Basic phenomena	104
4.6.2	Sources of ionising radiation used in radiotherapy	104
4.6.3	Methods of radiotherapy	105
5	Biophysical basis of invasive therapeutic methods (Hrazdira)	107
5.1	Physical principles of modern surgical instruments	107
5.1.1	Electrosurgery	107
5.1.2	Lasers in surgery instrumentation	107
5.1.3	Ultrasound surgery	108

5.1.4 Cryosurgery	109
5.1.5 Water jet as a surgical tool	109
5.2 Equipment assisting or replacing organ functions.	110
5.2.1 Breathing assist devices	110
5.2.2 Heart assist device and artificial heart	110
5.2.3 Artificial kidney	111
5.2.4 Correction of defective vision	113
5.2.5 Correction of hearing losses	115
5.2.6 Limb prostheses	115
5.2.7 Syringe pumps	116
5.2.7.1 Syringe pumps for common use	
5.2.7.2 Thrombolytic pump	
5.2.7.3 Insulin pumps	
6 Principles of computing for medical students (Bourek)	118
6.1 Analogy between computing and other work	118
6.2 Glossary of terms related to computer technology	118
6.3 Historical overview / Computer history	124
6.4 Advantages of electronic digital computers	125
6.5 Common computer architecture	125
6.6 Hardware	127
6.6.1 Components of a PC	128
6.6.2 Peripherals	130
6.6.3 Devices	131
6.6.4 Storage devices	133
6.6.5 Wireless technologies	136
6.6.6 How the tools work	136
6.7 Software	137
6.8 Liveware	137
6.9 Networks	137
7 Literature	139
Index	140
