About the Companion Website		xix
1 Astrobiology		1
1.1	Introductory Remarks	1
1.2	The Major Questions of Astrobiology and the Content of the Textbook	3
1.3	Some Other Features of the Textbook	9
1.4	A Brief History of Astrobiology	10
1.5	Conclusions	15
	Bibliography	15
2 What Is Life?		17
2.1	The Concept of “Life”	17
2.2	What Is Life? The Historical Perspective	17
2.3	Spontaneous Generation	19
2.4	More Modern Concepts	23
2.5	Schrödinger and Life	27
2.6	Life as a Dissipative Process	27
2.7	Life: Just a Human Definition?	28
2.8	Does It Matter Anyway?	30
2.9	Conclusions	30
	Questions for Review and Reflection	30
	Bibliography	31
3 Matter and Life		33
3.1	Matter and Life	33
3.2	Life Is Made of “Ordinary” Matter	34
3.3	The Atomic Nucleus	34
3.3.1	Isotopes	34
3.4	Electrons, Atoms, and Ions	35
3.5	Types of Bonding in Matter	37
3.6	Ionic Bonding	38
3.6.1	Ionic Bonds and Life	39
3.7	Covalent Bonding	39
3.7.1	Covalent Bonds and Life	40
3.8	Metallic Bonding	41
3.9	Van der Waals Interactions	42
3.9.1	Dipole–Dipole (Keesom) Forces	42
3.9.2	Dipole-Induced Dipole (Debye; Pronounced Deh-beye) Forces	43

3.9.3	Dispersion Forces	43
3.9.4	Van der Waals Interactions and Life	44
3.10	Hydrogen Bonding	44
3.10.1	Hydrogen Bonds and Life	45
3.11	An Astrobiological Perspective	46
3.12	The Equation of State Describes the Relationship Between Different Types of Matter	47
3.12.1	Phase Diagrams	47
3.12.2	Phase Diagrams and Mars	48
3.12.3	Phase Diagrams and Life	49
3.13	Other States of Matter	50
3.13.1	Plasma	50
3.13.2	Degenerate Matter	50
3.14	The Interaction Between Matter and Light	53
3.14.1	The Special Case of the Hydrogen Atom	56
3.14.2	Uses for Astrobiology	56
3.15	Conclusions	57
	Questions for Review and Reflection	57
	Bibliography	57
4	The Molecular Structure of Life	59
4.1	Building Life	59
4.2	The Essential Elements: CHNOPS	59
4.3	Carbon Is Versatile	62
4.4	The Chains of Life	62
4.5	Proteins	63
4.6	Chirality	66
4.7	Carbohydrates (Sugars)	68
4.8	Lipids	71
4.9	The Nucleic Acids	72
4.9.1	Ribonucleic Acid	74
4.10	The Solvent of Life	76
4.10.1	Water as a Solvent	76
4.11	Alternative Chemistries	78
4.11.1	Alternative Core Elements	78
4.11.2	Alternative Solvents	82
4.12	The Structure of Life and Habitability	84
4.13	Conclusions	84
	Questions for Review and Reflection	85
	Bibliography	85
5	The Cellular Structure of Life	87
5.1	From Molecules to Cells	87
5.2	Types of Cells	88
5.3	Shapes of Cells	90
5.4	The Structure of Cells	90
5.5	The Structure of Cellular Membranes	91
5.5.1	Gram-Negative and -Positive Prokaryotic Membranes	93
5.5.2	Archaeal Membranes	94

5.6	The Information Storage System of Life	96
5.6.1	Transcription – DNA to RNA	97
5.6.2	Translation – RNA to Protein	97
5.6.3	A Remarkable Code	100
5.6.4	The Evolution of the Codons	100
5.6.5	DNA Replication	102
5.6.6	Plasmids	103
5.6.7	eDNA	105
5.7	Eukaryotic Cells	105
5.7.1	Endosymbiosis	107
5.8	The Reproduction of Cells	107
5.9	Why Did Sexual Reproduction Evolve?	108
5.10	The Growth of Populations of Cells	110
5.11	Moving and Communicating	111
5.11.1	Movement in Prokaryotes	111
5.11.2	Communication in Prokaryotes	114
5.11.3	“Multicellularity” in Prokaryotes and Single-Celled Eukaryotes	114
5.12	Viruses	116
5.13	Prions	118
5.14	Conclusions	118
	Questions for Review and Reflection	119
	Bibliography	119
6	Energy for Life	121
6.1	Energy and Astrobiology	121
6.2	Life and Energy	122
6.3	The Central Role of Adenosine Triphosphate	123
6.4	Chemiosmosis and Energy Acquisition	125
6.5	What Types of Electron Donors and Acceptors Can Be Used?	128
6.6	Aerobic Respiration	129
6.7	Anaerobic Respiration	132
6.8	Fermentation	134
6.9	Chemoautotrophs: Changing the Electron Donor	134
6.9.1	Chemoautotrophy and Fixing CO ₂	135
6.9.2	Methanogens and Insights into the Evolution of Metabolism	137
6.9.3	How Universal Is Metabolism? The TCA Cycle Revisited	138
6.9.4	Methanotrophs	139
6.9.5	Sulfur Cycling	140
6.9.6	Iron Oxidizers	141
6.9.7	Nitrogen Cycling and the Chemoautotrophs	142
6.10	Energy from Light: Photosynthesis	142
6.11	Oxygenic Photosynthesis	142
6.12	Anoxygenic Photosynthesis	145
6.13	Rhodopsins and Photosynthesis	148
6.14	Evolution of Photosynthesis	149
6.15	Global Biogeochemical Cycles	150
6.16	Microbial Mats – Energy-Driven Zonation in Life	152

6.17	The Thermodynamics of Energy Acquisition and Life	154
6.17.1	Gibbs Free Energy: The Energy in Reactants and Products	154
6.17.2	Gibbs Free Energy: The Concentration of Compounds	154
6.17.3	Gibbs Free Energy: Using Redox Reactions	155
6.17.4	Gibbs Free Energy: An Example	156
6.18	Energy and Life in Extremes	156
6.19	Conclusions	158
	Questions for Review and Reflection	158
	Bibliography	158
7	The Limits of Life	161
7.1	The Limits of Life	161
7.2	The Importance of the Limits of Life for Astrobiology	162
7.3	The Most Extreme Conditions are Dominated by Microbes	163
7.4	Life at High Temperatures	165
7.4.1	Uses for Thermostable Molecules	166
7.5	Life at Low Temperatures	167
7.6	Salt-Loving Organisms	170
7.6.1	Salt-In Strategy	171
7.6.2	Salt-Out Strategy	172
7.6.3	Low Water Activity	172
7.7	pH Extremes	173
7.8	Life Under High Pressure	174
7.9	Tolerance to High Radiation	176
7.10	Life in Toxic Brews	176
7.11	Rocks as a Habitat	177
7.12	Polyextremophiles – Dealing with Multiple Extremes	180
7.13	Life Underground	181
7.14	Dormancy in Extreme Conditions	183
7.15	Eukaryotic Extremophiles	184
7.16	Are There Other Biospheres with Different Limits?	185
7.17	The Limits of Life: Habitability Revisited	186
7.18	Conclusions	186
	Questions for Review and Reflection	186
	Bibliography	187
8	The Tree of Life	189
8.1	A Vast Quantity of Life	189
8.2	Evolution and a “Tree of Life”	190
8.3	Classifying Organisms	192
8.4	The Tree of Life and Some Definitions	194
8.5	Problems with Classification: Homology and Analogy	196
8.6	Building a Phylogenetic Tree Using Genetic Material	198
8.7	Types of Phylogenetic Trees	202
8.8	A Modern View of the Tree of Life	202
8.9	Using Phylogenetic Trees to Test Hypotheses	204
8.10	Complications in Building Trees	206
8.10.1	Endosymbiosis	206
8.10.2	Horizontal Gene Transfer	207

8.11	Origin of Eukaryotes	210
8.12	The Last Universal Common Ancestor	211
8.13	Multiple Origins of Life?	212
8.14	Alien Life	213
8.15	Conclusions	214
	Questions for Review and Reflection	214
	Bibliography	214
9	The Universe, the Solar System, and the Elements of Life	217
9.1	Our Cosmic Situation	217
9.2	In the Beginning: The Formation of the Universe	218
9.3	Stellar Evolution: Low-Mass Stars	222
9.4	Stellar Evolution: High-Mass Stars	224
9.5	The Elements of Life	228
9.6	The Hertzsprung–Russell Diagram	228
9.7	The Sun Is a Blackbody	232
9.8	The Formation of Planets	233
9.9	Types of Objects in Our Solar System	236
9.10	Meteorites and Their Classification	239
9.11	Laws Governing the Motion of Planetary Bodies	243
9.12	Conclusions	245
	Questions for Review and Reflection	246
	Bibliography	246
10	Astrochemistry: Carbon in Space	249
10.1	Astrochemistry: Carbon Molecules in Space	249
10.2	Observing Organics	249
10.3	In the Beginning	250
10.4	Different Environments for Chemistry	251
10.4.1	Diffuse Interstellar Clouds	251
10.4.2	Molecular Clouds	251
10.4.3	Protoplanetary Discs	251
10.4.4	Carbon-Rich Stars	254
10.4.5	Shock Waves from Supernova Explosions	254
10.5	How Do Chemical Reactions Occur?	254
10.6	Forming Carbon Compounds	256
10.7	Formation of Water	257
10.8	Interstellar Grains	258
10.9	Polycyclic Aromatic Hydrocarbons	258
10.10	Even More Carbon Diversity	261
10.10.1	Prebiotic Compounds	261
10.11	Comets and Organic Molecules	261
10.12	The Origin of Chirality	262
10.13	Laboratory Experiments	263
10.14	Observing Organic Molecules	264
10.15	Conclusions	265
	Questions for Review and Reflection	265

22.3	Threats to a Civilization	551
22.3.1	Supervolcanoes	551
22.3.2	Asteroid and Comet Impacts	552
22.3.3	Disease	552
22.4	Climate Change and the Challenge to Civilization	553
22.5	The Human Future Beyond Earth	555
22.5.1	The Rocket Equation	555
22.6	Settling the Solar System	556
22.6.1	Where First?	556
22.6.2	Life Support Systems	556
22.6.3	Human Exploration of Mars	559
22.6.4	The Asteroids	561
22.6.5	The Outer Solar System	563
22.6.6	Large Human Settlements in Space	564
22.7	Avoiding Extinction or Collapse: A Multiplanet Species	565
22.8	Environmentalism and Space Exploration as a Single Goal?	566

22.9	Sociology: The Overview Effect	567
22.10	Will We Become Interstellar?	568
22.11	Conclusions	569
	Questions for Review and Reflection	569
	Bibliography	569
Appendix		571
A.1	The Astrobiology Periodic Table	571
A.2	Units and Scales	571
	A.2.1 Standard International Base Units	571
	A.2.2 Basic Physical Constants	572
A.3	Temperature Scale Conversion	572
A.4	Composition of the Sun	573
A.5	Some of the Major Star Types, Temperatures, and Colors	573
A.6	Three- and One-Letter Designations of Amino Acids	573
A.7	Codon Table for the Genetic Code Associated with mRNA (also shown in Chapter 5; Figure 5.12)	574
A.8	Planetary Data	575
A.9	Geological Time Scale	576
