Preface xi

1. Oscillation theory for second-order linear difference equations 1
   - 1.1. Introduction 1
   - 1.2. Basic concepts 3
   - 1.3. Riccati-type transformations 11
   - 1.4. Reid's roundabout theorem and Sturmian theory 15
     - 1.4.1. The disconjugacy characterization theorem 15
     - 1.4.2. Sturmian theory 16
   - 1.5. Disconjugacy and disfocality 17
     - 1.5.1. Dominant and recessive solutions 23
     - 1.5.2. More on disconjugacy characterization 26
     - 1.5.3. Disfocality 31
   - 1.6. Conjugacy criteria 33
   - 1.7. Methods of linear discrete oscillation theory 40
     - 1.7.1. Riccati technique 40
     - 1.7.2. Variational principle 40
   - 1.8. Oscillation and nonoscillation criteria 41
   - 1.9. Comparison theorems 69
   - 1.10. Oscillation, nonoscillation, and monotone solutions 71
   - 1.11. Oscillation criteria by Riccati technique 75
   - 1.12. Oscillation criteria by averaging techniques 87
   - 1.13. Further criteria by averaging techniques 102
   - 1.14. Oscillation criteria for linear damped difference equations 117
     - 1.14.1. Oscillation of a reducible damped equation 118
     - 1.14.2. Oscillation criteria of summation averaging type 121
     - 1.14.3. Oscillation criteria of nonsummation type 127
   - 1.15. Oscillation and nonoscillation criteria for forced equations 131
     - 1.15.1. Implicit-type results 133
     - 1.15.2. Some explicit criteria 137
   - 1.16. Some qualitative properties of solutions 141
     - 1.16.1. Some properties of dominant and recessive solutions 141
     - 1.16.2. Reciprocity principle 148
     - 1.16.3. Behavioral properties of dominant and recessive solutions 148
     - 1.16.4. Further classification of solutions 156
     - 1.16.5. Comparison theorems 161
   - 1.17. More on nonoscillation criteria 163
   - 1.18. Limit point results 168
   - 1.19. Growth and some oscillation criteria 173

1.19.1. Growth of solutions 173
1.19.2. Oscillation criteria 175
1.20. Mixed difference equations 176
1.21. Notes and general discussions 180

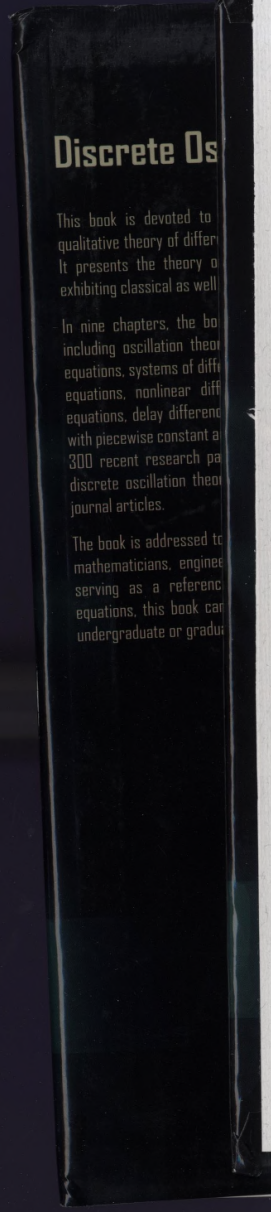
2. Oscillation theory for systems of difference equations 183
2.1. Introduction 183
2.2. Discrete variational problems 185
2.2.1. Problem and notation 185
2.2.2. Inhomogeneous discrete quadratic functionals 186
2.2.3. Solution of discrete variational problems 189
2.3. Linear Hamiltonian difference systems 191
2.3.1. Notation and assumptions 191
2.3.2. Special solutions of the Hamiltonian system 194
2.3.3. Riccati matrix difference equations 198
2.4. The discrete Picone formula 203
2.4.1. Discrete quadratic functionals 203
2.4.2. The proof of the discrete Picone identity 207
2.5. Disconjugacy and controllability 212
2.5.1. Focal points 212
2.5.2. Generalized zeros 215
2.5.3. Controllability 220
2.6. Positivity of discrete quadratic functionals 226
2.6.1. The Reid roundabout theorem 226
2.6.2. Sturm's separation and comparison theorems 227
2.6.3. The extended Reid roundabout theorem 231
2.6.4. Separated boundary conditions 235
2.6.5. Solvability of discrete Riccati equations 239
2.7. Sturm-Liouville difference equations 244
2.7.1. Disconjugacy 244
2.7.2. The Reid roundabout theorem 252
2.8. Moore-Penrose inverses 257
2.9. Notes and general discussions 263

3. Oscillation theory for half-linear difference equations 265
3.1. Introduction 265
3.2. Preliminaries and basic concepts 266
3.3. Reid's roundabout theorem and Sturmian theory 273
3.3.1. The disconjugacy characterization theorem 273
3.3.2. Sturmian theory 282
3.4. Nonoscillation and conjugacy criteria 283
3.4.1. Nonoscillation theorems based on the Riccati technique 283
3.4.2. Nonoscillation theorems based on the variational principle 294
3.4.3. Conjugacy criteria 299

3.5. Oscillation criteria 304
3.5.1. Oscillation criteria based on the Riccati technique 304
3.5.2. Further oscillation criteria based on the Riccati technique 319
3.5.3. Oscillation criteria based on the variational principle 336
3.6. Comparison theorems 342
3.6.1. Some results from algebra 342
3.6.2. Some comparison theorems 343
3.6.3. Comparison theorem for generalized Riccati difference equations 347
3.7. More on oscillation, nonoscillation, and positive solutions 347
3.7.1. Preparatory lemmas 348
3.7.2. Sufficient conditions 350
3.7.3. Necessary conditions 353
3.8. Strong oscillation 361
3.8.1. Strong oscillation, nonoscillation, and conditional oscillation 361
3.8.2. Generalized Euler difference equation 364
3.9. Half-linear difference equations with damping term 365
3.10. Half-linear difference equations with forcing term 372
3.11. Notes and general discussions 375

4. Oscillation theory for nonlinear difference equations I 377
4.1. Oscillation criteria 377
4.2. Superlinear oscillation 391
4.3. Sublinear oscillation 399
4.4. Oscillation characterizations 412
4.5. Oscillation of damped nonlinear difference equations 426
4.6. Asymptotic behavior for nonlinear difference equations 435
4.7. Oscillation criteria via Liapunov's second method 443
4.8. Notes and general discussions 451

5. Oscillation theory for nonlinear difference equations II 453
5.1. Oscillation criteria 453
5.1.1. Oscillation criteria—(I_1) 454
5.1.2. Superlinear oscillation 463
5.1.3. Sublinear oscillation 474
5.1.4. Oscillation criteria—(I_2) 479
5.1.5. Oscillation criteria for damped equations 486
5.2. Monotone solutions of nonlinear difference equations 488
5.2.1. Existence of positive monotone solutions of (5.2.2) 488
5.2.2. Existence of monotone solutions of (5.2.1) 491
5.3. Bounded, unbounded, and monotone properties 492
5.3.1. Positive decreasing solutions 492
5.3.2. Positive increasing solutions 503



5.4. Notes and general discussions 514

6. Oscillation theory for difference equations with deviating arguments 515
6.1. Oscillation criteria (I) 516
6.1.1. Oscillation of equation (6.1.1) 516
6.1.2. Comparison theorems 541
6.1.3. Oscillation of equation (6.1.2) 545
6.2. Oscillation criteria (II) 553
6.2.1. Oscillation of equation (6.2.1) 554
6.2.2. Oscillation of equation (6.2.2) 565
6.2.3. Asymptotic behavior 572
6.2.4. Decaying nonoscillatory solutions of equation (6.2.130) 577
6.3. Oscillation via characteristic equations 584
6.3.1. Positive solutions of equation (6.3.1) 585
6.3.2. Oscillation of unbounded solutions of equation (6.3.2) 589
6.4. Oscillation of damped difference equations 594
6.4.1. Almost oscillation 600
6.5. Oscillation of forced difference equations 615
6.6. Notes and general discussions 624

7. Oscillation theory for neutral difference equations 627
7.1. Oscillation criteria via comparison 627
7.1.1. Linearization theorems 635
7.1.2. Comparison results for forced neutral equations 643
7.2. Nonoscillation criteria 648
7.3. Existence of nonoscillatory solutions 656
7.4. Classification of nonoscillatory solutions 667
7.4.1. Nonoscillatory solutions of equation ($7.4.1^+$) 668
7.4.2. Nonoscillatory solutions of equation ($7.4.1^-$) 674
7.4.3. Oscillation and asymptotic behavior 678
7.5. Further oscillation criteria 680
7.6. Oscillation criteria for mixed neutral difference equations 692
7.6.1. Oscillation of equations with constant coefficients 693
7.6.2. Oscillation of equations with periodic coefficients 707
7.6.3. Oscillation via characteristic equations 717
7.7. Notes and general discussions 726

8. Stability and oscillation theory for differential equations with piecewise constant arguments 727
8.1. Oscillation of linear first-order delay equations 727
8.1.1. Oscillation criteria 728
8.1.2. First-order equations of alternately retarded and advanced type 743
8.1.3. Characteristic equations 748
8.2. Oscillation of linear second-order delay equations 751

8.2.1. Existence of solutions 752
8.2.2. The case $\omega = 0$ 756
8.2.3. The case $\omega \neq 0$ 760
8.2.4. Second-order equations of alternately retarded and advanced type 766
8.2.5. Neutral differential equations with piecewise constant argument 770
8.3. Systems of alternately retarded and advanced type 776
8.3.1. The case $A = 0$ 777
8.3.2. The case A nonsingular 781
8.4. Applications 784
8.5. Notes and general discussions 787

9. Miscellaneous topics 791
9.1. Generalized characteristic equations 791
9.2. Difference equations with periodic coefficients 804
9.2.1. Oscillation of equation (9.2.1) 805
9.2.2. Delay difference equations with positive and negative coefficients 820
9.2.3. Oscillation of equation (9.2.3) 825
9.2.4. Oscillation of equation (9.2.4) 832
9.3. Linearized oscillations for difference equations 840
9.3.1. Linearized oscillations for equation (9.3.1) 840
9.3.2. Linearized oscillations for equation (9.3.2) 843
9.4. Oscillation of recursive sequences 849
9.4.1. Oscillation of $x(k+1) = ax(k)/[1 + bx(k-\tau)]$ 850
9.4.2. Oscillation of $x(k+1) = [a + bx(k)]/[c + x(k-\tau)]$ 854
9.4.3. Oscillation of the discrete delay logistic equation 863
9.4.4. Oscillation of certain recursive sequences 865
9.5. Global behavior of certain difference equations 871
9.5.1. Global attractivity in a nonlinear second-order difference equation 874
9.5.2. Global asymptotic stability of a second-order difference equation 880
9.5.3. A rational recursive sequence 883
9.5.4. On the recursive sequence $x(k+1) = \alpha + (x(k-1)/x(k))$ 889
9.5.5. Global stability of a certain recursive sequence 894
9.5.6. Global attractivity in a nonlinear delay difference equation 899
9.5.7. On the recursive sequence $x(k+1) = ax(k) + (b + cx(k-1))e^{-x(k)}$ 905
9.5.8. Global attractivity in a differential equation with piecewise constant arguments 914
9.6. Nonlinear difference equations with continuous variable 918
9.7. Oscillation for systems of delay difference equations 928
9.8. Oscillatory behavior of solutions of functional equations 935

5.4. Notes and general discussions 514

6. Oscillation theory for difference equations with deviating arguments 515
6.1. Oscillation criteria (I) 516
6.1.1. Oscillation of equation (6.1.1) 516
6.1.2. Comparison theorems 541
6.1.3. Oscillation of equation (6.1.2) 545
6.2. Oscillation criteria (II) 553
6.2.1. Oscillation of equation (6.2.1) 554
6.2.2. Oscillation of equation (6.2.2) 565
6.2.3. Asymptotic behavior 572
6.2.4. Decaying nonoscillatory solutions of equation (6.2.130) 577
6.3. Oscillation via characteristic equations 584
6.3.1. Positive solutions of equation (6.3.1) 585
6.3.2. Oscillation of unbounded solutions of equation (6.3.2) 589
6.4. Oscillation of damped difference equations 594
6.4.1. Almost oscillation 600
6.5. Oscillation of forced difference equations 615
6.6. Notes and general discussions 624

7. Oscillation theory for neutral difference equations 627
7.1. Oscillation criteria via comparison 627
7.1.1. Linearization theorems 635
7.1.2. Comparison results for forced neutral equations 643
7.2. Nonoscillation criteria 648
7.3. Existence of nonoscillatory solutions 656
7.4. Classification of nonoscillatory solutions 667
7.4.1. Nonoscillatory solutions of equation ($7.4.1^{+}$) 668
7.4.2. Nonoscillatory solutions of equation ($7.4.1^{-}$) 674
7.4.3. Oscillation and asymptotic behavior 678
7.5. Further oscillation criteria 680
7.6. Oscillation criteria for mixed neutral difference equations 692
7.6.1. Oscillation of equations with constant coefficients 693
7.6.2. Oscillation of equations with periodic coefficients 707
7.6.3. Oscillation via characteristic equations 717
7.7. Notes and general discussions 726

8. Stability and oscillation theory for differential equations with piecewise constant arguments 727
8.1. Oscillation of linear first-order delay equations 727
8.1.1. Oscillation criteria 728
8.1.2. First-order equations of alternately retarded and advanced type 743
8.1.3. Characteristic equations 748
8.2. Oscillation of linear second-order delay equations 751

8.2.1. Existence of solutions 752
8.2.2. The case $\omega = 0$ 756
8.2.3. The case $\omega \neq 0$ 760
8.2.4. Second-order equations of alternately retarded and advanced type 766
8.2.5. Neutral differential equations with piecewise constant argument 770
8.3. Systems of alternately retarded and advanced type 776
8.3.1. The case $A = 0$ 777
8.3.2. The case A nonsingular 781
8.4. Applications 784
8.5. Notes and general discussions 787

9. Miscellaneous topics 791
9.1. Generalized characteristic equations 791
9.2. Difference equations with periodic coefficients 804
9.2.1. Oscillation of equation (9.2.1) 805
9.2.2. Delay difference equations with positive and negative coefficients 820
9.2.3. Oscillation of equation (9.2.3) 825
9.2.4. Oscillation of equation (9.2.4) 832
9.3. Linearized oscillations for difference equations 840
9.3.1. Linearized oscillations for equation (9.3.1) 840
9.3.2. Linearized oscillations for equation (9.3.2) 843
9.4. Oscillation of recursive sequences 849
9.4.1. Oscillation of $x(k+1) = ax(k)/[1 + bx(k-\tau)]$ 850
9.4.2. Oscillation of $x(k+1) = [a + bx(k)]/[c + x(k-\tau)]$ 854
9.4.3. Oscillation of the discrete delay logistic equation 863
9.4.4. Oscillation of certain recursive sequences 865
9.5. Global behavior of certain difference equations 871
9.5.1. Global attractivity in a nonlinear second-order difference equation 874
9.5.2. Global asymptotic stability of a second-order difference equation 880
9.5.3. A rational recursive sequence 883
9.5.4. On the recursive sequence $x(k+1) = \alpha + (x(k-1)/x(k))$ 889
9.5.5. Global stability of a certain recursive sequence 894
9.5.6. Global attractivity in a nonlinear delay difference equation 899
9.5.7. On the recursive sequence $x(k+1) = ax(k) + (b + cx(k-1))e^{-x(k)}$ 905
9.5.8. Global attractivity in a differential equation with piecewise constant arguments 914
9.6. Nonlinear difference equations with continuous variable 918
9.7. Oscillation for systems of delay difference equations 928
9.8. Oscillatory behavior of solutions of functional equations 935

9.9. Notes and general discussions 942
