<b>Preface to the Second Edition</b>	<b>iii</b>
<b>Preface to the First Edition</b>	<b>vii</b>
<b>1. Introduction</b>	<b>1</b>
1.1 Dynamical Systems	3
1.2 Stability Preserving Mappings	8
1.3 Stability of Motion	16
1.4 Finite Dimensional Systems	25
1.5 Infinite Dimensional Systems	26
1.6 Differential Inclusions	27
1.7 Hybrid Dynamical Systems	28
1.8 Stability of Hybrid and Discontinuous Dynamical Systems	30
1.9 Case Studies in Hybrid and Discontinuous Dynamical Systems	36
Bibliography	39
<b>2. Dynamical Systems</b>	<b>41</b>
2.1 Notation	42
2.2 Dynamical Systems	43
2.3 Ordinary Differential Equations	45
2.4 Ordinary Difference Equations	55
2.5 Ordinary Differential Inequalities	58
2.6 Ordinary Difference Inequalities	60
2.7 Functional Differential Equations	61
2.8 Volterra Integrodifferential Equations	70
2.9 Semigroups	74
2.10 Partial Differential Equations	84

2.11 Notes and References .....	93
2.12 Problems .....	95
Bibliography .....	105
<b>3. Stability Preserving Mappings</b> .....	<b>111</b>
3.1 Invariant Sets .....	112
3.2 Qualitative Characterizations .....	117
3.3 Stability Preserving Mappings .....	125
3.4 Comparison Theorems .....	134
3.5 Applications .....	140
3.6 A Perspective .....	148
3.7 Notes and References .....	150
3.8 Problems .....	151
Bibliography .....	161
<b>4. Stability of Motion</b> .....	<b>165</b>
4.1 Systems of Differential and Difference Inequalities as Comparison Systems .....	167
4.2 Results Involving Quasimonotonicity Conditions: Continuous-Time Case .....	173
4.3 Results Involving Monotonicity Conditions: Discrete-Time Case .....	181
4.4 The Principal Lyapunov Theorems for General Dynamical Systems .....	185
4.5 Converse Theorems .....	196
4.6 Autonomous Systems .....	205
4.7 Invariance Theory .....	209
4.8 Uniqueness of Motions .....	215
4.9 Lyapunov Functions and Stability Preserving Mappings .....	220
4.10 Applications to Discrete Event Systems .....	223
4.11 Notes and References .....	240
4.12 Problems .....	241
Bibliography .....	254
<b>5. Finite Dimensional Systems</b> .....	<b>259</b>
5.1 Preliminaries .....	260

5.2 Stability and Boundedness .....	265
5.3 Instability .....	274
5.4 Invariance Theory .....	278
5.5 Converse Theorems .....	282
5.6 Comparison Theory .....	284
5.7 Applications: Absolute Stability of Regulator Systems .....	288
5.8 Applications to Artificial Neural Networks .....	295
5.9 Applications to Digital Filters .....	301
5.10 Notes and References .....	305
5.11 Problems .....	307
Bibliography .....	327
<b>6. Infinite Dimensional Systems</b> .....	<b>333</b>
6.1 Preliminaries .....	334
6.2 Stability and Boundedness .....	339
6.3 Instability .....	351
6.4 Invariance Theory .....	359
6.5 Converse Theorems .....	365
6.6 Comparison Theory .....	366
6.7 Hybrid Systems .....	375
6.8 An Application to Artificial Neural Networks with Time Delays .....	382
6.9 Application to a Multicore Nuclear Reactor Model .....	387
6.10 Notes and References .....	390
6.11 Problems .....	391
Bibliography .....	406
<b>7. Differential Inclusions</b> .....	<b>411</b>
7.1 Preliminaries .....	413
7.2 Stability Analysis .....	415
7.3 Invariance Theory .....	418
7.4 Dynamical Systems Determined by Differential Inequalities .....	422
7.5 Applications to Robust Stability .....	426

7.6 Applications to Absolute Stability of Regulator Systems .....	434
7.7 Applications to a Class of Nonlinear Circuits and Artificial Neural Networks .....	439
7.8 Notes and References .....	445
7.9 Problems .....	446
Bibliography .....	453
<b>8. Hybrid Dynamical Systems</b>	<b>457</b>
8.1 A Model for General Hybrid Dynamical Systems .....	460
8.2 Some Examples of Hybrid Dynamical Systems Defined on Generalized Time .....	463
8.3 Some Qualitative Characterizations of Hybrid Dynamical Systems .....	469
8.4 Embedding of Hybrid Dynamical Systems into Dynamical Systems Defined on Real Time $R^+$ .....	474
8.5 Some Examples of Hybrid Dynamical Systems Defined on $R^+$ .....	481
8.6 Notes and References .....	495
8.7 Problems .....	496
Bibliography .....	503
<b>9. Stability of Hybrid and Discontinuous Dynamical Systems</b>	<b>509</b>
9.1 Stability of Discontinuous Dynamical Systems: Results Involving Stability Preserving Mappings .....	510
9.2 The Principal Lyapunov Theorems for Discontinuous Dynamical Systems .....	519
9.3 Converse Theorems .....	540
9.4 Results Involving Vector Lyapunov Functions .....	555
9.5 Interconnected Systems .....	565
9.6 Notes and References .....	573
9.7 Problems .....	574
Bibliography .....	576

<b>10. Case Studies in Hybrid and Discontinuous Dynamical Systems</b>	<b>583</b>
10.1 Some Qualitative Properties of Sampled-Data Control Systems .....	585
10.2 Stability Analysis of Multirate Digital Control Systems .....	597
10.3 Stability Analysis of Pulse-Width-Modulated Feedback Control Systems .....	610
10.4 A Class of Variable Structure Systems: Hopfield Neural Nets with Infinite Gain Amplifiers ...	638
10.5 Dynamical Systems Subjected to State Saturation Constraints .....	659
10.6 Notes and References .....	685
Bibliography .....	687

<b>Index</b>	<b>697</b>
