List of Figures xi

Preface xvii

Acknowledgments xxi

1 Introduction 1

1.1 Modeling . . . 1
1.2 What Are Differential Equations? . . . 2
1.3 One-Dimensional Dynamics . . . 5
1.4 Examples . . . 8
Population Dynamics . . . 8
Mechanical Systems . . . 10
Oscillating Circuits . . . 11
Fluid Mixing . . . 13
1.5 Two-Dimensional Dynamics . . . 14
Nullclines . . . 14
Phase Curves . . . 17
1.6 The Lorenz Model . . . 19
1.7 Quadratic ODEs: The Simplest Chaotic Systems . . . 21
1.8 Exercises . . . 23

2 Linear Systems 29

2.1 Matrix ODEs . . . 29
Eigenvalues and Eigenvectors . . . 30
Diagonalization . . . 33
2.2 Two-Dimensional Linear Systems . . . 35
2.3 Exponentials of Operators . . . 40
2.4 Fundamental Solution Theorem . . . 45
2.5 Complex Eigenvalues . . . 48
2.6 Multiple Eigenvalues . . . 50
Semisimple-Nilpotent Decomposition . . . 51
The Exponential . . . 53
Alternative Methods . . . 56

2.7 Linear Stability . . . 57
2.8 Nonautonomous Linear Systems and Floquet Theory . . . 61
2.9 Exercises . . . 67

3 Existence and Uniqueness **73**
3.1 Set and Topological Preliminaries . . . 73
Convergence . . . 75
Uniform Convergence . . . 75
3.2 Function Space Preliminaries . . . 76
Metric Spaces . . . 77
Contraction Maps . . . 80
Lipschitz Functions . . . 81
3.3 Existence and Uniqueness Theorem . . . 84
3.4 Dependence on Initial Conditions and Parameters . . . 92
3.5 Maximal Interval of Existence . . . 98
3.6 Exercises . . . 101

4 Dynamical Systems **105**
4.1 Definitions . . . 105
4.2 Flows . . . 107
4.3 Global Existence of Solutions . . . 109
4.4 Linearization . . . 112
4.5 Stability . . . 116
4.6 Lyapunov Functions . . . 123
4.7 Topological Conjugacy and Equivalence . . . 130
4.8 Hartman–Grobman Theorem . . . 138
4.9 Omega-Limit Sets . . . 143
4.10 Attractors and Basins . . . 148
4.11 Stability of Periodic Orbits . . . 152
4.12 Poincaré Maps . . . 154
4.13 Exercises . . . 159

5 Invariant Manifolds **165**
5.1 Stable and Unstable Sets . . . 165
5.2 Heteroclinic Orbits . . . 167
5.3 Stable Manifolds . . . 170
5.4 Local Stable Manifold Theorem . . . 173
5.5 Global Stable Manifolds . . . 181
5.6 Center Manifolds . . . 186
5.7 Exercises . . . 192

6 The Phase Plane **197**
6.1 Nonhyperbolic Equilibria in the Plane . . . 197
6.2 Two Zero Eigenvalues and Nonhyperbolic Nodes . . . 198
6.3 Imaginary Eigenvalues: Topological Centers . . . 203
6.4 Symmetries and Reversors . . . 211

6.5 Index Theory . . . 214
Higher Dimensions: The Degree . . . 217
6.6 Poincaré–Bendixson Theorem . . . 219
6.7 Liénard Systems . . . 224
6.8 Behavior at Infinity: The Poincaré Sphere . . . 229
6.9 Exercises . . . 238

7 Chaotic Dynamics 243
7.1 Chaos . . . 243
7.2 Lyapunov Exponents . . . 248
Definition . . . 250
Properties of Lyapunov Exponents . . . 252
Computing Exponents . . . 255
7.3 Strange Attractors . . . 259
Hausdorff Dimension . . . 260
Strange, Nonchaotic Attractors . . . 262
7.4 Exercises . . . 265

8 Bifurcation Theory 267
8.1 Bifurcations of Equilibria . . . 267
8.2 Preservation of Equilibria . . . 271
8.3 Unfolding Vector Fields . . . 273
Unfolding Two-Dimensional Linear Flows . . . 275
8.4 Saddle-Node Bifurcation in One Dimension . . . 278
8.5 Normal Forms . . . 281
Homological Operator . . . 282
Matrix Representation . . . 285
Higher-Order Normal Forms . . . 287
8.6 Saddle-Node Bifurcation in $\mathbb{R}^n$ . . . 290
Transversality . . . 291
Center Manifold Methods . . . 293
8.7 Degenerate Saddle-Node Bifurcations . . . 295
8.8 Andronov–Hopf Bifurcation . . . 296
8.9 The Cusp Bifurcation . . . 301
8.10 Takens–Bogdanov Bifurcation . . . 304
8.11 Homoclinic Bifurcations . . . 306
Fragility of Heteroclinic Orbits . . . 306
Generic Homoclinic Bifurcations in $\mathbb{R}^2$ . . . 309
8.12 Melnikov's Method . . . 311
8.13 Melnikov's Method for Nonautonomous Perturbations . . . 314
8.14 Shilnikov Bifurcation . . . 322
8.15 Exercises . . . 325

9 Hamiltonian Dynamics 333
9.1 Conservative Dynamics . . . 333
9.2 Volume-Preserving Flows . . . 335

9.3 Hamiltonian Systems . . . 336
9.4 Poisson Dynamics . . . 340
9.5 The Action Principle . . . 343
9.6 Poincaré Invariant . . . 346
9.7 Lagrangian Systems . . . 348
Coordinate Independence of the Action . . . 350
Symmetries and Invariants . . . 354
9.8 The Calculus of Variations . . . 356
9.9 Equivalence of Hamiltonian and Lagrangian Mechanics . . . 358
9.10 Linearized Hamiltonian Systems . . . 360
Eigenvalues of Hamiltonian Matrices . . . 362
9.11 Krein Collisions . . . 365
9.12 Integrability . . . 368
9.13 Nearly Integrable Dynamics . . . 369
Invariant Tori . . . 370
KAM Theory . . . 371
9.14 Onset of Chaos in Two Degrees of Freedom . . . 373
9.15 Resonances: Single Wave Model . . . 378
9.16 Resonances: Multiple Waves . . . 381
9.17 Resonance Overlap and Chaos . . . 382
9.18 Exercises . . . 386

Appendix Mathematical Software **393**
A.1 Vector Fields . . . 393
A.2 Matrix Exponentials . . . 394
A.3 Lyapunov Exponents . . . 395
A.4 Bifurcation Diagrams . . . 396
A.5 Poincaré Maps . . . 397

Bibliography **399**

Index **407**
