Preface	vii
Chapter 1. Understanding Animal Behavior	1
1.1 The causes of behavior	2
1.2 A framework for models of behavior	4
1.3 The structure of behavior models	7
1.4 Neural network models	18
Chapter 2. Fundamentals of Neural Network Models	31
2.1 Network nodes	31
2.2 Network architectures	39
2.3 Achieving specific input-output mappings	45
2.4 Organizing networks without specific guidance	57
2.5 Working with your own models	58
Chapter 3. Mechanisms of Behavior	67
3.1 Analysis of behavior systems	67
3.2 Building neural network models	70
3.3 Reactions to stimuli	75
3.4 Sensory processing	89
3.5 Temporal patterns	96
3.6 Many sources of information and messy information	99
3.7 Central mechanisms of decision making	100
3.8 Motor control	115
3.9 Consequences of damage to nervous systems	123
Chapter 4. Learning and Ontogeny	129
4.1 What are learning and ontogeny?	129
4.2 General aspects of learning	130
4.3 Network models of general learning phenomena	141
4.4 Behaviorally silent learning	151
4.5 Comparison with animal learning theory	155
4.6 Training animals versus training networks	159
4.7 Ontogeny	160
4.8 Conclusions	170

Chapter 5. Evolution 173

5.1 The evolution of behavior systems 173

5.2 Requirements for evolving behavior mechanisms 175

5.3 The material basis of behavioral evolution 178

5.4 Exploring evolution with neural network models 186

5.5 Conclusions 202

Chapter 6. Conclusions 205

6.1 Are neural networks good models of behavior? 205

6.2 Do we use too simple network models? 208

6.3 Comparisons with other models 208

6.4 Neural networks and animal cognition 210

6.5 Final words 218
