1 Light as a wave

1.1	Wave optics	1
1.2	A brief history	1
1.3	Maxwell's equations	2
1.4	Maxwell's wave equation	2
1.5	Principle of superposition	3
1.6	The harmonic wave solution	3
1.7	\mathcal{E} or \mathcal{B} ?	4
1.8	Phasors	5
1.9	Spatial frequency	5
1.10	Intensity/Poynting vector	7
1.11	Complex representation	8
1.12	Scalar approximation	9
1.13	General solution	10
1.14	Propagation	10
1.15	Waves and quanta	11
	Exercises	13

2 One wave: plane or curved

2.1	Introduction	15
2.2	Wave fronts	15
2.3	Plane waves	15
2.4	Transverse property	16
2.5	Scalar plane wave	17
2.6	Plane wave in a medium	18
2.7	Law of refraction	19
2.8	Dispersion	20
2.9	Fresnel coefficients	20
2.10	Brewster's angle	22
2.11	Reflectivity	22
2.12	Curved wave fronts	23
2.13	Paraxial optics	23
2.14	Paraxial curvature	25
2.15	Lenses: a brief history	26
2.16	Geometry of a lens	27
2.17	Collimation	28
2.18	Imaging property	29
	Exercises	31

3	Two waves: interference	33
3.1	Introduction	33
3.2	A brief history	33
3.3	Two plane waves	35
3.4	Standing waves	36
3.5	Two spherical waves	36
3.6	Young's interferometer	37
3.7	Plane plus spherical	40
3.8	Three waves	42
3.9	Diffraction grating	43
3.10	Interferometry	45
3.11	Fabry-Perot etalon	45
3.12	Michelson interferometer	47
	Exercises	49
4	Polarization	51
4.1	Introduction	51
4.2	Linear basis ($ $)	52
4.3	Linear polarization ($ $)	53
4.4	Circular polarization ($ $)	53
4.5	Elliptical polarization ($ $)	55
4.6	Circular basis (\circ)	55
4.7	Poincaré sphere (\circ)	56
4.8	Photon spin (\circ)	56
4.9	Polarized light in a medium	57
4.10	Polarizers	58
4.11	Malus' Law	58
4.12	Linear birefringence ($ $)	59
4.13	Wave plates ($ $)	59
4.14	Circular birefringence ($ $)	61
4.15	Natural optical activity ($ $)	61
4.16	The Faraday effect ($ $)	62
4.17	Interference	64
	Exercises	67
5	Many waves I: Fresnel and Fraunhofer	71
5.1	Introduction	71
5.2	A brief history	71
5.3	Fresnel diffraction integral	72
5.4	Fresnel zones	74
5.5	Circular aperture	75
5.6	Cartesian separability	76
5.7	Fraunhofer diffraction	77
	5.7.1 Case I: Focal plane of a lens	77
	5.7.2 Case II: Far field	78
5.8	One, two, many slits	79
5.9	2D Fraunhofer	82
5.10	Fresnel integrals	85

5.11 Talbot effect	87
Exercises	88
6 Many waves II: Fourier	91
6.1 Introduction	91
6.2 Fourier	91
6.3 Angular spectrum	95
6.4 Propagation	98
6.5 Fourier to Fresnel	99
6.6 Fresnel to Fourier	101
6.7 Regular arrays	102
6.8 Babinet's principle	104
Exercises	107
7 Optical phenomena in the time domain	111
7.1 Introduction	111
7.2 Frequency spectrum	111
7.3 An optical pulse	112
7.4 Two pulses	113
7.5 Multiple pulses	114
7.6 Two frequencies	116
7.7 Many waves: propagation	117
7.8 Group propagation	118
7.9 Group velocity dispersion	119
7.10 Dispersive resonance	121
7.11 Slow light	122
7.12 Fast light	122
7.13 Information propagation	123
Exercises	125
8 Coherence	127
8.1 Introduction	127
8.2 Statistical light	128
8.3 Temporal coherence	128
8.4 White light	130
8.5 Wiener-Khinchin-Einstein theorem	132
8.6 Power spectral density	133
8.7 Intensity correlations	136
8.8 Spatial coherence	136
8.9 van Cittert-Zernike	137
8.10 Propagation of coherence	140
8.11 Stellar interferometry	141
Exercises	142
9 Optical imaging	147
9.1 Introduction	147
9.2 History: Zeiss and Abbe	147
9.3 Point-spread function	148
9.4 Angular resolution	149

9.5	f to f	151
9.6	Two-lens system	153
9.7	Magnification	155
9.8	Complementarity I	156
	Exercises	157
10	Spatial filtering	159
10.1	Introduction	159
10.2	Apodization	159
10.2.1	Apodization of 1D apertures	160
10.2.2	Apodization of 2D apertures	162
10.2.3	Inverse apodization and super-resolution	163
10.3	Spatial filtering	164
10.4	1D periodic	165
10.5	2D periodic	166
10.6	2D arbitrary objects	167
10.7	Convolution	170
10.8	Phase-contrast imaging	171
10.9	Complementarity II	172
	Exercises	174
11	Light propagation: beams and guides	177
11.1	Introduction	177
11.2	Laser beam propagation	177
11.3	Focusing of laser beams	180
11.4	Optical cavities	182
11.5	Waveguides	183
11.6	Modes within a slit	184
11.7	A cylindrical light guide	185
11.8	Step-index fibre	188
11.9	Fibre modes	189
	Exercises	193
12	Vector light fields	195
12.1	EM fields are not purely transverse	195
12.2	Beyond paraxial	196
12.2.1	Optical beams—‘non-existence’ theorems	198
12.3	Vector angular spectrum	198
12.3.1	Far-field analysis of the angular spectrum	200
12.4	Radial/azimuthal modes	201
12.4.1	Radial polarization	202
12.4.2	Azimuthal polarization	202
12.5	High-NA focusing	203
12.5.1	Geometry and integral representation of the focused field	204
12.5.2	Linearly polarized illumination	205
12.5.3	Radially polarized illumination	207
12.5.4	Azimuthally polarized input	207

Exercises	210
13 Light and matter	213
13.1 Induced dipoles	213
13.2 Refractive index	214
13.3 Ewald–Oseen extinction	217
13.4 Clausius–Mossotti	219
13.5 Kramers–Kronig	220
13.6 Point-like scatterers	221
13.6.1 Scattering cross section	222
13.7 The extinction paradox	225
13.8 Metals	225
13.9 Non-linear optics	228
Exercises	231
A Electromagnetic scalar and vector potentials	233
A.1 The potentials ϕ and \mathbf{A}	233
A.2 Gauge transformations	234
A.3 Application: Electric field of a dipole	235
B Fourier transform toolkit	239
B.1 Executive summary	239
B.2 δ -function	240
B.3 Properties	241
B.4 Convolution	242
B.5 $\text{rect} \Leftrightarrow \text{sinc}$	243
B.6 $\text{gauss} \Leftrightarrow \text{gauss}$	244
B.7 δ -function \Leftrightarrow constant	246
B.8 Phasor $\Leftrightarrow \delta$ -function	247
B.9 $\text{comb} \Leftrightarrow \text{comb}$	247
B.10 2D Fourier transforms	250
B.11 Cartesian separability	250
B.12 2D rect	250
B.13 $\text{circ} \Leftrightarrow \text{jinc}$	250
B.14 Fourier on a computer	252
Exercises	253
C Induced dipoles	255
C.1 Induced dipole moment	255
C.2 Optical Bloch equations	256
C.3 Complex polarizability	258
C.4 Lorentz model	259
References	261
Index	267
