

# Contents

Preface .....	xv	A brief history of light theory .....	19
Editors' Acknowledgements .....	xvii	Wave-particle duality .....	20
Author Biographies .....	xviii	The nature of light .....	20
<b>1. Introduction to the imaging process .....</b>	<b>1</b>	Radiometry and photometry .....	21
Introduction .....	1	Radiometric definitions .....	21
The imaging process .....	2	Photometric definitions .....	21
Image control .....	3	Optics .....	21
Control of image shape .....	3	Wave theory .....	22
Depth of field .....	5	Simple harmonic motion .....	23
Tone and contrast .....	5	Principle of superposition .....	25
Colour .....	6	Plane waves .....	27
The origins of photography .....	6	Light intensity .....	27
Camera obscura .....	6	Refraction and dispersion .....	27
Early experiments .....	6	Polarization .....	28
Towards the development process – the		Interference .....	30
Daguerreotype .....	7	Diffraction .....	32
The negative-positive process .....	7	Diffraction of a circular aperture	
Modern materials .....	7	and a single slit .....	32
Photographic imaging today .....	8	Rayleigh criterion .....	34
Characteristics of photographic materials .....	8	The electromagnetic spectrum .....	35
Capturing colour .....	9	Black-body radiation .....	37
Digital imaging .....	10	Wien's Displacement Law .....	38
Early digital images .....	10	Planck's Law .....	38
The CMOS sensor .....	11	The photoelectric effect .....	39
Colour digital capture .....	11	The photon .....	40
Other digital devices .....	12	Bohr model of the atom .....	40
Digital image representation .....	12	The emission of electromagnetic	
Spatial resolution .....	14	radiation in atoms .....	41
Bit depth .....	14	Bibliography .....	42
Colour representation .....	15	<b>3. Photographic light sources .....</b>	<b>43</b>
File size and file formats .....	15	Introduction .....	43
Imaging chains .....	15	Characteristics of light sources .....	43
Evaluating image quality .....	17	Spectral quality .....	43
Bibliography .....	18	Spectral power distribution curve .....	43
<b>2. Light theory .....</b>	<b>19</b>	Colour temperature .....	44
Introduction .....	19	Colour rendering .....	45
		Percentage content of primary hues .....	45
		Measurement and control of colour	
		temperature .....	45

The mired scale.....	46	Binocular vision.....	72
Light output.....	46	Performance of the eye.....	73
Units.....	46	Luminance discrimination.....	73
Illumination laws.....	46	Contrast sensitivity function.....	74
Reflectors and luminaires.....	47	Visual acuity.....	74
Constancy of output.....	48	Animal vision.....	74
Efficiency.....	48	Bibliography.....	76
Daylight.....	48		
Tungsten filament lamps.....	49	<b>5. Introduction to colour science.....</b>	<b>77</b>
Tungsten-halogen lamps.....	49	Introduction.....	77
Fluorescent lamps.....	50	The physics of colour.....	77
Metal-halide lamps.....	50	Colour terminology.....	77
Pulsed xenon lamps.....	50	The colour of objects.....	78
Expendable flashbulbs.....	50	Spectral absorptance, reflectance and	
Electronic flash.....	52	transmittance.....	79
Flash circuitry.....	52	CIE standard illuminating and viewing	
Flash output and power.....	52	geometries.....	80
Flash duration and exposure.....	53	CIE standard illuminants and sources.....	81
Portable units.....	53	Models of colour vision.....	82
Studio flash.....	53	The basics of colorimetry.....	84
Automatic flash exposure.....	54	Colour matching functions and the CIE	
Integral flash units.....	54	standard observers.....	86
Red-eye avoidance.....	55	Calculating tristimulus values from	
Other sources.....	55	spectral data.....	87
Light-emitting diodes.....	55	Chromaticity diagrams.....	88
Diode lasers.....	57	CIE uniform colour spaces and colour	
Bibliography.....	57	differences.....	91
		Metamerism and types of metameric	
<b>4. The human visual system.....</b>	<b>59</b>	matches.....	92
Introduction.....	59	The appearance of colours.....	94
The physical structure of the human eye.....	59	Visual adaptation and related	
Tunics.....	60	mechanisms.....	94
Cornea.....	60	Other colour appearance phenomena.....	96
Conjunctiva.....	60	An introduction to CATs and CAMs.....	97
Iris and pupil.....	60	A generalized CAT.....	97
Crystalline lens.....	61	Colour appearance models (CAMs).....	98
Ciliary body.....	61	Colour reproduction.....	98
Vitreous cavity and vitreous humour.....	61	Objectives of colour reproduction.....	99
Retina and choroid.....	61	Instruments used in colour measurement.....	100
Optic nerve.....	62	Viewing conditions.....	101
Structure of the retina.....	62	Bibliography.....	102
Rods and cones.....	64		
'Non-imaging' cell layers.....	66	<b>6. Photographic and geometrical optics.....</b>	<b>103</b>
Receptive fields.....	67	Introduction.....	103
Dark adaptation.....	68	Photographic optics.....	103
Elementary colour vision.....	69	Optical materials.....	103
Young-Helmholtz theory of colour		Reflection.....	104
vision.....	69	Refraction.....	104
Opponent theory of colour vision.....	69	Transmission.....	104
Colour anomalous vision.....	69	Dispersion.....	105
Movement and Focusing.....	70	Polarization.....	105
Focusing and correction of eyesight.....	70	Geometrical optics.....	106
Movement.....	71	Simple lens.....	106
The visual pathway.....	72	Cardinal planes.....	106
Visual cortex.....	72	Focal length.....	107

Image magnification .....	108	<b>8. Sensitometry .....</b>	<b>139</b>
Mirrors .....	109	Introduction .....	139
Optical calculations.....	109	The subject .....	139
Parameters.....	109	Exposure .....	139
Equations.....	109	Density and other relevant measures.....	140
Focusing movements .....	110	Transmittance.....	140
Depth of field and depth of focus.....	111	Opacity .....	140
The photometry of image formation .....	111	Density.....	140
Stops and pupils.....	111	Effect of light scatter in a negative .....	140
Aperture .....	112	Callier coefficient.....	141
Image luminance and illumination .....	112	Density in practice.....	142
Image illuminance.....	113	The Characteristic (H and D) curve .....	143
Exposure compensation for close-up		Main regions of the negative characteristic	
photography.....	114	curve.....	143
Lens flare .....	114	Variation of the characteristic curve with	
T-numbers .....	115	the material .....	144
Anti-reflection coatings.....	115	Gamma–time curve.....	145
Types of coating.....	116	Variation of gamma with wavelength.....	145
Bibliography.....	117	Placing the subject on the characteristic	
<b>7. Images and image formation .....</b>	<b>119</b>	curve.....	146
Introduction.....	119	Effect of variation of exposure of the	
Sinusoidal waves .....	120	negative.....	146
Modulation .....	121	Average gradient and $\bar{G}$ .....	146
Images and sine waves.....	121	Contrast index.....	147
Imaging sinusoidal patterns.....	123	Effect of variation in development on the	
Fourier theory of image formation .....	124	negative.....	147
Linear, spatially invariant systems.....	124	Exposure latitude.....	147
Spread functions.....	125	The response curve of a photographic	
The point spread function (PSF) .....	126	paper .....	148
The line spread function (LSF) .....	126	Maximum black.....	148
The edge spread function (ESF).....	126	Exposure range of a paper.....	149
The imaging equation (from input		Variation of the print characteristic	
to output).....	127	curve with the type of emulsion.....	149
The imaging equation in one dimension...	128	Variation of the print characteristic	
The modulation transfer function (MTF) ...	128	curve with development .....	149
Special Fourier transform pairs.....	130	Requirements in a print.....	150
The rectangular function.....	130	Paper contrast .....	150
The Dirac delta function.....	130	Reciprocity law failure .....	151
Properties of $\delta(x)$ .....	131	Practical effects of reciprocity failure .....	151
Importance of $\delta(x)$ .....	132	Intermittency effect.....	152
The Gaussian function .....	132	Sensitometers .....	152
The modulation transfer function		Densitometers .....	152
revisited .....	132	Microdensitometers.....	153
Cascading of MTFs .....	133	Colour densitometers .....	153
Convolution revisited .....	133	Bibliography.....	154
A geometric interpretation of		<b>9. Image sensors .....</b>	<b>155</b>
convolution.....	133	Introduction .....	155
The convolution theorem.....	133	Materials and detection of light .....	155
Discrete transforms and sampling.....	134	Conductors, insulators and	
Undersampling a cosine wave .....	134	semiconductors.....	156
The Dirac comb (the sampling function) ...	134	Doping.....	157
The process of sampling.....	135	Photoemission and photoabsorption.....	158
The MTF for a CCD imaging array.....	137	Diodes.....	159
Bibliography.....	138	Transistors .....	159

CCD and CMOS sensors .....	159	Macro lenses .....	191
MOS capacitor .....	159	Optical attachments .....	191
Photodiodes .....	160	Afocal converter lenses .....	191
Pixels .....	160	Close-up (supplementary) lenses .....	192
CCD and CMOS image readout .....	160	Other attachments .....	192
CCD readout .....	161	Teleconverters .....	193
CMOS readout .....	164	Optical filters .....	194
Amplification and analogue-to-digital		Absorption filters .....	194
conversion .....	164	UV and IR filters .....	195
Scanning methods .....	166	Neutral-density filters .....	196
Imaging performance .....	167	Polarizing filters .....	196
Performance trade-offs .....	167	Bibliography .....	197
Microlens arrays .....	169		
Sensitivity .....	169	<b>11. Photographic camera systems .....</b>	<b>199</b>
Exposure control .....	170	Introduction .....	199
Sensor imperfections .....	171	Image format .....	199
Generating colour .....	171	Camera types .....	199
Bibliography .....	173	Simple cameras .....	199
<b>10. Camera lenses .....</b>	<b>175</b>	Compact cameras .....	200
Lens aberrations .....	175	Rangefinder cameras .....	202
Introduction .....	175	Twin-lens reflex (TLR) cameras .....	202
Axial chromatic aberration .....	175	Single-lens reflex (SLR) cameras .....	202
Lateral chromatic aberration .....	176	Technical cameras .....	203
Spherical aberration .....	177	Special-purpose cameras .....	204
Coma .....	178	Cameras for self-developing materials .....	204
Curvature of field .....	178	Aerial cameras .....	204
Astigmatism .....	178	Underwater cameras .....	204
Curvilinear distortion .....	178	Ultrawide-angle cameras .....	204
Lens aperture and performance .....	180	Panoramic cameras .....	205
Photographic lenses .....	180	Automatic cameras .....	206
Photographic lens types .....	181	Analogue systems .....	206
Simple lenses .....	181	Digital control .....	206
Compound lenses .....	181	Camera features .....	207
Development of the photographic		Shutter systems .....	207
lens .....	182	Flash synchronization .....	209
Simple lenses and achromats .....	182	The iris diaphragm .....	211
The Petzval lens .....	182	Viewfinder systems .....	213
Symmetrical doublets .....	182	Focusing systems .....	214
Anastigmats .....	183	Autofocus systems .....	217
Triplets .....	184	Exposure metering systems .....	219
Double-Gauss lenses .....	184	Automatic exposure .....	219
Modern camera lenses .....	184	Programmed exposure modes .....	219
Wide-angle lenses .....	185	Segmented photocell systems .....	221
Symmetrical-derivative lenses .....	185	Battery power .....	222
Retrofocus lenses .....	186	Camera shake and image stabilization .....	223
Fish-eye lenses .....	186	Camera movements .....	224
Long-focus lenses .....	186	Bibliography .....	225
Long-focus designs .....	186		
Telephoto lenses .....	186	<b>12. Exposure and image control .....</b>	<b>227</b>
Catadioptric lenses ('mirror lenses') .....	187	Camera exposure .....	227
Zoom and varifocal lenses .....	188	Exposure relationships and logarithms .....	228
Zoom lenses .....	188	Relative aperture .....	229
Zoom lenses for compact and digital		Shutter speed .....	229
cameras .....	190	Subject luminance ratio .....	229
		Dynamic range of sensors .....	230

Optimum exposure and the transfer function .....	231	Other uses of dye sensitization .....	250
Exposure meters .....	232	Structure of photographic materials .....	251
Hand-held exposure meters .....	232	Production of light-sensitive materials and sensors .....	251
Acceptance angle .....	234	The support .....	252
Exposure values .....	235	Coating the photographic emulsion .....	252
Exposure factors .....	235	Sizes and formats of photographic materials .....	253
Reciprocity law failure .....	236	Speed of photographic materials .....	253
Types of light measurement .....	237	Speed systems and standards .....	254
Incident light measurement .....	237	Characteristics of photographic materials .....	255
Reflected light measurement .....	237	Graininess and granularity .....	255
In-camera metering modes .....	237	Contrast .....	255
Spot metering .....	237	Sharpness and acutance .....	256
Partial area metering .....	237	Chemistry of the photographic process .....	256
Centre-weighted average metering .....	237	Developers and development .....	256
Matrix or multi-zone metering .....	238	Composition of a developing solution .....	256
Electronic flash exposure .....	238	Developing agents .....	257
Guide numbers .....	238	Preservatives .....	257
Reflected light measurement techniques .....	239	Alkalis .....	258
Measurement of total scene luminance .....	239	Restrainers (anti-foggants) .....	258
Measuring a middle grey surface (key tone) .....	239	Miscellaneous additions to developers .....	258
Measurement of luminance of the darkest shadow .....	240	Superadditivity (Synergesis) .....	259
Measurement of luminance of the lightest highlight .....	240	Development time .....	259
Averaging values .....	240	Printing .....	259
Exposure techniques and digital cameras .....	240	Darkroom work .....	260
Using the image histogram .....	240	Development .....	260
'Exposing to the right' .....	241	Bibliography .....	260
The zone system .....	241	<b>14. Digital cameras and scanners .....</b>	<b>263</b>
The zones .....	241	Digital still cameras .....	263
The zone system and digital cameras .....	242	Digital still camera architecture .....	263
High-dynamic-range (HDR) imaging .....	242	Imaging optics .....	265
Bibliography .....	243	Image sensor .....	267
<b>13. Image formation and the photographic process .....</b>	<b>245</b>	Shutter systems .....	268
Introduction .....	245	Dynamic range in digital cameras .....	269
Silver halides .....	245	Colour capture .....	269
Latent image formation .....	247	Three-sensor cameras .....	270
Spectral sensitivity of photographic materials .....	248	Sequential colour cameras .....	270
Response of photographic materials to short-wave radiation .....	248	Colour filter array (CFA) cameras .....	270
Response of photographic materials to visible radiation .....	249	The Super CCD™ .....	271
Spectral sensitization .....	249	The Foveon™ sensor .....	272
Orthochromatic materials .....	249	Rendered versus unrendered camera processing .....	272
Panchromatic materials .....	249	Exposure determination and auto-exposure .....	273
Extended sensitivity materials .....	250	Autofocus control .....	273
Infrared materials .....	250	Analogue processing .....	274
		Digital processing .....	274
		Colour demosaicing .....	274
		Setting white balance .....	275
		Digital zoom, resizing and cropping .....	276
		Noise reduction .....	276
		Sharpening .....	277

Tone/colour rendering.....	277	Toner materials.....	310
Camera types .....	277	Colour, resolution and output .....	310
Compact digital cameras.....	278	Half-toning and dithering.....	310
Bridge digital cameras.....	279	Resolution.....	311
Digital single-lens reflex (DSLR) cameras.....	279	Printing press.....	312
Digital cameras and camera backs for medium and large format.....	280	Relief printing.....	313
Specialist digital cameras.....	280	Planographic printing (or lithography).....	313
Image scanners .....	280	Recess printing.....	313
Types of scanners .....	282	Through printing.....	313
Drum scanners.....	282	Bibliography .....	314
Flatbed scanners .....	282		
Film scanners .....	283	<b>17. Digital image file formats.....</b>	<b>315</b>
Flextight scanners .....	284	Introduction.....	315
Multi-spectral scanners .....	284	Raster and vector graphics.....	315
Scanner characteristics .....	284	Bit-depth support and colour encoding.....	316
Sampling and resolution.....	284	Compression methods .....	316
Dynamic range .....	285	Standardization of the format.....	316
Bit depth.....	286	Metadata and Exif .....	317
Scanning speed.....	286	Colour management.....	317
Image transfer.....	286	Additional features.....	317
Scanner drivers .....	286	Tagged image file format (TIFF).....	317
Bibliography .....	287	TIFF/EP .....	318
		TIFF/IT .....	319
<b>15. Displays .....</b>	<b>289</b>	Joint Photographic Experts Group (JPEG).....	319
Introduction.....	289	Joint Photographic Experts Group 2000 (JPEG 2000).....	320
Image display.....	289	RAW .....	321
Cathode ray tube (CRT) displays.....	289	Digital negative (DNG).....	322
Liquid crystal displays (LCDs) .....	293	Graphics interchange format (GIF).....	323
Other display technologies .....	296	Portable network graphics (PNG).....	324
Plasma display panels (PDPs).....	296	Photoshop document (PSD) .....	325
Organic light-emitting displays (OLEDs).....	296	Photo CD (PCD).....	326
Flexible displays .....	297	Postscript (PS) and encapsulated postscript (EPS).....	326
Characteristics of displays.....	297	EPS .....	327
Refresh rate and response time .....	297	Portable document format (PDF).....	327
Resolution.....	298	Bibliography .....	327
Luminance .....	299		
Contrast ratio.....	299	<b>18. Image storage and archiving .....</b>	<b>329</b>
Viewing angle .....	299	Introduction.....	329
Colour .....	300	Life expectancy of traditional photographic media.....	329
Display artefacts .....	301	Processing conditions .....	331
Effect of viewing conditions .....	302	Dark fading .....	331
Bibliography .....	302	Light fading.....	333
		Storage conditions .....	334
<b>16. Digital printing and materials.....</b>	<b>303</b>	Atmospheric gases.....	336
Introduction.....	303	Toning .....	336
Printing technologies.....	303	Life expectancy of digital prints.....	336
Inkjet printers .....	303	Printing technologies and media .....	337
Electrophotographic printers .....	305	Permanence factors and test for digital prints.....	338
Thermography .....	307	Digital image storage and longevity .....	339
Pictrography.....	308	Magnetic storage.....	340
Printing media and their properties .....	308	Optical disc storage.....	340
Paper for inkjet printing.....	309		
Inks for inkjet printing .....	309		

Other digital image archiving issues.....	342
Bibliography .....	343
<b>19. Introduction to image quality and system performance .....</b>	<b>345</b>
Introduction.....	345
Subjective and objective image quality .....	345
Image quality assessment.....	346
Basic image quality attributes (or dimensions) .....	346
The image quality circle .....	348
Further image quality attributes .....	349
Digital image artefacts .....	350
Distortion, fidelity and quality.....	351
Image distortion.....	351
Image fidelity.....	351
Image quality.....	352
The use of a reference image .....	353
Test charts and test scenes.....	353
Test charts.....	353
Test scenes.....	354
Image psychophysics .....	354
Psychometric scales.....	355
The psychometric function .....	355
Scaling methods .....	356
Scene dependency in image quality.....	357
Choice of test scenes.....	360
Image quality metrics and models.....	361
Bibliography .....	363
<b>20. Speed and sensitivity.....</b>	<b>365</b>
Sensitivity of imaging systems.....	365
Spectral sensitivity of digital cameras .....	366
Measurement of the spectral sensitivity of digital cameras.....	366
Determination of the colour sensitivity of an unknown photographic emulsion .....	367
Wedge spectrograms .....	367
Uses of wedge spectrograms .....	368
Speed of imaging systems .....	368
Methods of expressing speed.....	368
Threshold systems.....	369
Fixed density.....	369
Inertia .....	369
Minimum useful gradient .....	369
Fractional gradient .....	370
Speed systems and standards.....	370
ISO speed ratings for colour silver-based materials.....	372
Colour negative film.....	372
Colour reversal film .....	372
Speed of digital systems .....	373
Speed based on saturation ( $S_{\text{sat}}$ ).....	373
Speed based on noise ( $S_{\text{noise}}$ ).....	374
Standard output sensitivity (SOS) .....	374
Recommended exposure index (REI) .....	374
Digital camera ISO settings.....	374
Typical sensitivities of film and CCD devices and speed ratings in practice.....	374
Bibliography .....	375
<b>21. Tone reproduction.....</b>	<b>377</b>
Theory of tone reproduction .....	377
Transfer functions and gamma.....	377
Overall transfer function and overall gamma.....	378
Subjective tone reproduction, optimum gamma and viewing conditions .....	378
Quadrant diagram.....	379
Tone reproduction of imaging devices and image encoding systems .....	380
CRT display transfer function .....	380
Liquid crystal display (LCD) transfer function .....	382
Measuring display transfer functions.....	382
Transfer functions of digital acquisition devices .....	383
Measuring acquisition device transfer functions .....	384
Image encoding: sRGB, Adobe RGB and JPEG transfer functions.....	384
Transfer functions of printers .....	386
Other measures related to tone and contrast .....	386
Dynamic range and contrast ratio.....	386
Contrast in uniform areas, test targets and images.....	387
Non-linear quantization, bit-depth requirements and gamma correction.....	388
Bibliography .....	391
<b>22. Photographic colour reproduction.....</b>	<b>393</b>
Introduction.....	393
Complementary pairs of colours.....	393
Colour photographic processes .....	393
Additive colour photography .....	394
Subtractive processes.....	395
Integral tripacks .....	395
Formation of subtractive image dyes.....	396
Colour sensitometry .....	396
Negative–positive colour.....	396
Reversal colour .....	399
Colour photographic materials .....	400
Location of colour formers .....	401
Colour processing .....	401
Reversal process.....	402

Negative–positive process .....	403	Factors affecting the graininess of prints .....	436
Prints from transparencies .....	405	Granularity .....	436
Enhancement of colour reproduction .....	407	Factors affecting negative granularity .....	436
Colorimetry of photographic images .....	408	Variation of granularity with density .....	437
Bibliography .....	409	Quantifying image noise .....	437
<b>23. Digital colour reproduction .....</b>	<b>411</b>	Variance .....	438
Introduction .....	411	Estimating $\sigma^2$ .....	438
Colour space and colour encoding .....	412	Selwyn's law .....	438
Classification of colour spaces .....	412	The autocorrelation function .....	438
RGB (red, green, blue) .....	413	The noise power spectrum .....	438
CMY(K) (cyan, magenta, yellow, black) .....	413	Relationships between noise measures .....	439
HSL (hue, saturation, lightness) – and similar .....	413	Practical considerations for the autocorrelation function and the noise power spectrum .....	440
YCC (luminance, chrominance 1, chrominance 2) – and similar .....	413	Using the autocorrelation function .....	440
CIE colour spaces .....	413	Direct Fourier transformation of noise samples .....	440
Colorimetric colour spaces .....	414	Signal-to-noise ratio .....	441
Colour appearance spaces .....	414	Electronic system noise .....	442
Device dependent colour spaces .....	414	Resolution, sharpness and MTF .....	443
Image state .....	414	Resolving power of photographic systems .....	443
Sensor colour encoding .....	414	Measuring modulation transfer functions .....	445
Scene-referred colour encoding .....	414	Wave recording – sine-wave method .....	446
Output-referred colour encoding .....	415	Wave recording – square-wave methods .....	446
Original-referred colour encoding .....	415	Edge input method .....	446
Standard colour space and colour space encodings .....	416	Slanted edge method .....	447
sRGB (standard RGB) and sRGB-related colour space encodings .....	416	MTF correction .....	449
sYCC and sYCC-related .....	418	Resolving power and MTF for optical systems .....	449
ROMM RGB and RIMM RGB .....	419	Sharpness, MTF and image quality .....	450
Adobe RGB 1998 .....	419	Detective quantum efficiency (DQE) .....	451
Device colour characterization .....	419	General considerations .....	451
Physical models .....	420	DQE for the photographic process .....	453
Numerical models .....	422	DQE for a CCD or CMOS imaging array .....	453
Regression .....	423	DQE and signal-to-noise ratio .....	454
Look-up tables with interpolation .....	424	Information theory .....	454
Evaluation of the characterization model .....	425	Information capacity of images .....	455
Characterization of displays .....	426	Bibliography .....	456
Characterization of digital input devices .....	428	<b>25. Digital image workflow .....</b>	<b>457</b>
Gamut mapping .....	429	Imaging chains and image workflow .....	457
Gamut mapping aims .....	430	Principles guiding effective workflow .....	458
Gamut mapping techniques .....	430	Workflow approach .....	459
Bibliography .....	432	Resolution and the digital imaging chain .....	459
<b>24. Noise, sharpness, resolution and information .....</b>	<b>433</b>	Interpolation .....	460
Introduction .....	433	Interpolation methods and associated artefacts .....	461
Image noise .....	433	Interpolation and image workflow .....	462
Causes of noise in an image .....	433		
Photographic noise .....	434		
Graininess .....	434		

Calculating required resolution for image output .....	462	27. Spatial image processing.....	501
Bit depth: 8-bit versus 16-bit imaging.....	463	Introduction.....	501
Colour management.....	464	Background .....	501
Colour workflow .....	465	Structure of the digital image .....	501
File formats.....	466	Implementation of spatial domain processes.....	502
Image acquisition.....	466	Linear systems theory .....	503
RAW capture and workflow .....	467	Discrete convolution.....	503
Image editing.....	469	Point processing operations: intensity transformations .....	503
Image output .....	469	Brightness and contrast changes using linear transformation functions .....	503
Image archiving.....	470	Piecewise linear functions.....	504
Image optimization workflow .....	470	Image thresholding and quantization .....	504
Workflow examples.....	471	Power-law transformations: gamma correction .....	505
1. Commercial photography.....	471	Point processing: multiple image operations .....	507
2. Forensic imaging.....	472	Enhancement using arithmetic operations .....	507
3. Medical imaging .....	472	Enhancement using logic operations.....	507
Acknowledgements .....	473	Point processing: statistical operations.....	507
Bibliography .....	473	The image histogram .....	507
<b>26. Colour management systems.....</b>	<b>475</b>	Probability density function and probability distribution function .....	508
Introduction.....	475	Histogram slide and stretch.....	510
Colour management tasks .....	475	Histogram equalization.....	510
Closed-loop versus open-loop colour management .....	476	Point processing: geometric transformations .....	512
The International Color Consortium (ICC).....	477	Neighbourhood processing: spatial filtering techniques.....	512
ICC colour management architecture.....	478	Linear filtering .....	512
The profile connection space (PCS).....	479	Properties of linear filters.....	513
Rendering intents .....	479	Types of linear filters and their applications.....	514
The ICC perceptual intent reference medium and reference viewing conditions .....	481	Smoothing spatial filters .....	514
ICC profiles.....	481	Edge detection and sharpening spatial filters .....	515
Using profiles.....	483	Non-linear spatial filtering.....	518
Profile processing models .....	484	Median filters.....	518
Profile structure .....	486	Minimum and maximum filters.....	520
Structure of device profiles.....	487	Bibliography .....	520
Structure of colour space conversion profiles.....	489	<b>28. Digital image processing in the frequency domain .....</b>	<b>521</b>
Creating custom device profiles .....	490	Introduction.....	521
Display profiles.....	490	Fourier series and transform revisited .....	522
Input profiles .....	491	Fast Fourier transform (FFT).....	523
Scanner profiling.....	492	Imaging equation revisited .....	523
Digital camera profiling .....	492	Linear spatial filtering (convolution) .....	523
Using camera profiles .....	492	Frequency-domain filtering.....	524
Output profiles .....	493	Low-pass filtering .....	526
Colour management workflow .....	495	High-pass filtering.....	526
Colour rendering options .....	496		
Early-binding versus late-binding workflow .....	496		
RGB and CMYK workflows.....	496		
Using an intermediate colour space .....	497		
Proofing and soft-proofing images .....	498		
Bibliography .....	499		

High-boost filter.....	527	Image compression models.....	542
Band-pass and band-Stop filters.....	527	Lossless compression.....	543
Image restoration.....	529	Lossless compression methods.....	543
Inverse filtering.....	529	Reducing spatial redundancy.....	543
Optimal or Wiener filtering.....	531	Reducing coding redundancy:	
Maximum entropy reconstruction.....	531	variable-length coding.....	545
Interactive restoration.....	532	Lossy compression.....	546
Extended depth of field (EDOF).....	532	Evaluating lossy compression.....	547
Wavelet transform.....	532	Distortion metrics.....	547
Discrete wavelet transform.....	533	Alternative assessment methods.....	548
Bibliography.....	534	Lossy compression methods.....	548
<b>29. Image compression.....</b>	<b>535</b>	Quantization.....	549
Introduction.....	535	Lossy compression standards.....	549
Uncompressed image file sizes.....	535	Joint Photographic Experts Group	
Image data and information.....	535	(JPEG) standard.....	549
Basis of compression.....	536	JPEG 2000 standard.....	551
Types of redundancy.....	537	Bibliography.....	552
Measuring compression rate.....	538		
Scene dependency and compression.....	539	Appendix A.....	553
Information theory.....	539	Appendix B.....	555
Entropy and image structure.....	540	Index.....	557
Shannon's theorem.....	541
