

# Detailed Contents

Preface	v
General Information	viii
Ligand Nomenclature	x
<b>1. Organometallic Compounds of Main Group Elements</b>	<b>1</b>
1.1 General and Bonding Considerations	2
Box 1.1 Lithium ion intercalation	7
Key points	7
Exercises	7
1.2 Alkali Metal Organometallics: Lithium	8
1.2.1 Synthesis	8
1.2.2 Structure of Lithium Alkyls	10
1.2.3 Reactivity of Lithium Alkyls	11
1.2.4 Organometallic Compounds of the Heavier Alkali Metals: Na–Cs	15
Box 1.2.4 Mixed-metal complexes and superbases	17
Key points	16
Exercises	16
1.3 Organometallic Compounds of Alkaline Earth Metals	18
1.3.1 Beryllium	18
1.3.2 Magnesium	18
1.3.2.1 Synthesis	18
1.3.2.2 Structures of Magnesium Reagents	23
1.3.2.3 Reactions of Magnesium Reagents	24
Box 1.3.2 Grignard reagents	19
1.3.3 Calcium, Strontium, and Barium	25
Box 1.3.3 Unusual Ca(I) compound	27
Key points	27
Exercises	27
1.4 Zinc, Cadmium, and Mercury	28
1.4.1 Zinc Compounds	28
Box 1.4.1. Zinc alkyl purification	29
1.4.2 Cadmium Compounds	32
1.4.3 Mercury Compounds	33
1.4.3.1 Synthesis	33
1.4.3.2 Structural Aspects	35
Box 1.4.3 Organomercury compounds <i>in vivo</i>	36
Key points	37
Exercises	37

## DETAILED CONTENTS

1.5	Organometallic Compounds of the Boron Group	38
1.5.1	Boron Compounds	38
1.5.1.1	Synthetic Methods	43
1.5.1.2	Reactivity of Boron Compounds	44
1.5.1.3	Structure and Bonding	44
	Box 1.5.1.1 The importance of steric factors: stabilization of a transition state	42
	Box 1.5.1.2 Boron in uncommon bonding situations	45
	Box 1.5.1.3 Determination of Lewis acidity	45
	Box 1.5.1.4 Substituent effects in boranes: $C_6F_5$ versus $C_6H_5$	46
1.5.2	Aluminium	46
1.5.2.1	Synthesis	46
1.5.2.2	Structures and Properties	48
	Box 1.5.2.1 $^{27}Al$ NMR spectroscopy	49
	Box 1.5.2.2 Low-coordinate organoaluminium cations	50
1.5.2.3	Reactivity	51
	Box 1.5.2.3 The structure and function of MAO	53
1.5.2.4	Aluminium Compounds in Low Oxidation States	54
1.5.3	Gallium, Indium, and Thallium	55
1.5.3.1	Compounds in the Oxidation State III	56
1.5.3.2	Ga, In, Tl Compounds in Low Oxidation States	58
	Box 1.5.3.1 Low-valent metal alkyls and aryls	60
	Box 1.5.3.2 Metal alkyls as semiconductor precursors	62
	Key points	63
	Exercises	63
1.6	Organometallic Compounds of the Carbon Group	64
1.6.1	Silicon Compounds	64
1.6.1.1	Synthetic Methods	64
1.6.1.2	Reactivity	65
	Box 1.6.1.2 Silicone polymers	66
1.6.1.3	Compounds of Low-Valent Si	68
	Box 1.6.1.3 $^{29}Si$ NMR Spectroscopy	71
1.6.2	Germanium	71
1.6.3	Tin Compounds	71
	Box 1.6.3 Toxicity of tin(IV) reagents	72
1.6.3.1	Synthesis of Tin Compounds	72
1.6.3.2	Structures of Sn(IV) Compounds	73
1.6.3.3	Reactivity of Tin Compounds	74
1.6.3.4	Tin in Oxidation States +III and +II: Sn-Sn Bonds, Tin Radicals, and Stannylenes	77
	Box 1.6.3.1 Tin(II) and lone electron pairs	78
	Box 1.6.3.2 $^{119}Sn$ NMR spectroscopy	78
1.6.4	Lead Compounds	79
	Key points	80
	Exercises	80

<b>2. Organometallic Compounds of Transition Metals</b>	<b>81</b>
Box 2.0 Electron configuration and <i>d</i> -electron count	82
<b>2.1 Ligand Types</b>	<b>84</b>
<b>2.2 Common Types of Organometallic Complexes</b>	<b>86</b>
<b>2.3 Electron Counting and the 16/18-Electron Rule</b>	<b>91</b>
<b>2.3.1 Counting Conventions</b>	91
<b>2.3.2 Electron Counting and Oxidation States</b>	92
Key points	95
Exercises	95
<b>2.4 Ligand Properties and Metal–Ligand Bonding</b>	<b>96</b>
<b>2.4.1 Carbon Monoxide</b>	96
Box 2.4.1 CO reactivity	99
<b>2.4.2 Alkene and Alkyne Ligands</b>	98
Box 2.4.2 $^{13}\text{C}$ NMR spectroscopy	101
<b>2.4.3 <math>\pi</math>-Donor Ligands</b>	101
<b>2.4.4 Phosphines, Carbenes: Electronic and Steric Parameters</b>	102
<b>2.4.5 Common Co-Ligands</b>	107
Key points	109
Exercises	109
<b>2.5 L-Type <math>\pi</math>-Acceptor Ligands: Metal Carbonyl Complexes</b>	<b>110</b>
<b>2.5.1 Synthesis of Metal Carbonyls</b>	110
Box 2.5.1 Metal carbonyl complexes in biology and medicine	112
<b>2.5.2 Bonding in Binuclear and Cluster Complexes</b>	113
Key points	118
Exercises	118
<b>2.5.3 Reaction Mechanisms of Metal Carbonyls</b>	118
<b>2.5.3.1 Ligand Substitution: Principles and Mechanisms</b>	118
<b>2.5.3.2 CO Ligand Substitution: Overview and Methods</b>	122
<b>2.5.3.3 Nucleophilic Attack on CO</b>	124
Box 2.5.3 Nucleophilic attack on CO for hydrogen production	125
<b>2.5.4 Metal Carbonyl Anions</b>	125
<b>2.5.5 Metal Carbonyl Cations</b>	128
<b>2.5.6 Metal Carbonyl Halides</b>	129
<b>2.5.7 Metal Carbonyl Hydrides</b>	130
<b>2.5.7.1 Syntheses</b>	130
<b>2.5.7.2 Reactions</b>	132
Box 2.5.7 CO reduction: the Fischer–Tropsch process	134
<b>2.5.8 Related <math>\pi</math>-Acceptor Ligands</b>	134
<b>2.5.8.1 CS, CSe, and CT<sub>e</sub></b>	134
<b>2.5.8.2 Isocyanide Complexes</b>	135
<b>2.5.8.3 Nitrosyl Complexes</b>	136
Key points	137
Exercises	137

## DETAILED CONTENTS

2.6	L-Type $\pi$ -Acceptor Ligands: Alkenes, Dienes, and Alkynes	139
2.6.1	Alkene Complexes	141
2.6.1.1	Synthesis of Alkene Complexes	141
2.6.1.2	Reactions of Alkene Complexes	145
2.6.2	Diene Complexes	150
2.6.2.1	Synthesis of Conjugated Diene Complexes	150
2.6.2.2	Bonding in Complexes of Conjugated Dienes	151
	Box 2.6.2.2 Molecular wires and switches	154
2.6.2.3	Reactions of Conjugated Diene Complexes	153
	Box 2.6.2.3 Nucleophilic attack on $\pi$ -ligands: $\text{C}_6\text{H}_5\text{CH}_2^+$ versus $\text{C}_6\text{H}_5\text{CH}_2^-$	157
2.6.3	Alkyne Complexes	158
2.6.3.1	Synthesis of Alkyne Complexes	160
2.6.3.2	Reactivity of Alkyne Complexes	161
	Box 2.6.3 Alkyne complexes in organic synthesis: methodology	165
	Key points	168
	Exercises	168
2.7	$\text{LX}$ - and $\text{L}_2\text{X}$ -Type $\pi$ -Ligands: Allyl and Enyl Complexes	169
2.7.1	Metal Allyl Complexes	169
2.7.1.1	Synthesis	169
2.7.1.2	Properties	171
2.7.1.3	Reactivity of Allyl Complexes	172
	Box 2.7.1.3 Metal allyl catalysts	175
2.7.2	Metal Dienyl and Trienyl Complexes	177
2.7.2.1	Synthesis	177
2.7.2.2	Reactivity	178
	Box 2.7.2.2 Metal dienyl complexes in organic synthesis	178
	Key points	179
	Exercises	179
2.8	$\text{L}_2\text{X}$ -Type $\pi$ -Acceptor Ligands: Metallocene Complexes	180
2.8.1	Bis(cyclopentadienyl) Complexes	180
2.8.1.1	Synthesis of Metallocene Complexes	185
2.8.1.2	Structure and Bonding in $\text{MCp}_2$ Complexes	185
2.8.1.3	Reactions of $\text{MCp}_2$ Complexes	188
	Box 2.8.1.3 Ferrocenes in medicine and catalysis	191
2.8.2	Bent Metallocene Complexes	194
2.8.2.1	Synthesis of Bent Sandwich Complexes	194
2.8.2.2	Structures of Bent Metallocene Complexes	196
2.8.2.3	Reactivity of Bent Metallocene Complexes	198
	Box 2.8.2.1 Structural aspect of electrophilic metallocenes: square-planar and trigonal-bipyramidal $\text{C}_{18}\text{H}_{16}$	201
	Box 2.8.2.2 Metallocene materials: single-molecule magnets (SMMs)	203
	Key points	204
	Exercises	204

2.8.3	Mono-Cyclopentadienyl (Half-Sandwich) Complexes	204
2.8.3.1	Synthesis of Mono-Cp Complexes	205
2.8.3.2	Reactivity of Mono-Cp Complexes	207
	Box 2.8.3 Half-sandwich complexes in stereoselective synthesis	209
	Key points	211
	Exercises	211
2.9	Arene Complexes	212
2.9.1	Bis(Arene) Sandwich Complexes	212
2.9.1.1	Synthesis and Structures	212
2.9.1.2	Reactivity of Bis(Arene) Complexes	214
2.9.2	Arene Half-Sandwich Complexes	215
2.9.2.1	Synthesis and Structures of Mono-Arene Complexes	216
	Box 2.9.2.1 Mono-arene complexes for cancer treatment	217
2.9.2.2	Reactivity of Mono-Arene Carbonyl Complexes	218
2.9.3	Arene Complexes with Less Common Coordination Modes	221
2.9.4	Larger Arene Ligands: 7-, 8- and 9-Membered Rings	222
2.9.4.1	$\pi$ -C <sub>7</sub> H <sub>7</sub> Complexes	222
2.9.4.2	$\pi$ -C <sub>8</sub> H <sub>8</sub> Complexes	223
2.9.4.3	$\pi$ -C <sub>9</sub> H <sub>9</sub> Complexes	225
2.9.4.4	$\pi$ -Complexes of Heterocycles	225
	Key points	227
	Exercises	227
2.10	Sigma Complexes	228
2.10.1	H <sub>2</sub> Complexes	228
2.10.2	Alkane and Silane complexes	229
	Box 2.10.2 Alkane dehydrogenation and functionalization	232
	Key points	234
2.11	Complexes with M–C $\sigma$ -Bonds	235
2.11.1	Energetics and Reactivity of Metal Alkyls	235
2.11.2	Types and Bonding Modes of M–C $\sigma$ -Bonded Ligands	237
2.11.2.1	M–R Ligand Types	237
2.11.2.2	M–R Bonding Modes	238
2.11.2.3	The Importance of Steric Hindrance	240
2.11.3	Synthesis of Metal Alkyls	242
2.11.3.1	Synthesis of Homoleptic Metal Alkyl Complexes	242
	Box 2.11.3.1 The structures of homoleptic metal methyl complexes	245
2.11.3.2	Synthesis of Heteroleptic Metal Alkyl Complexes	245
	Box 2.11.3.2 Synthetic examples	252
2.11.3.3	Alkynyl Complexes	256
2.11.4	Reactivity of Metal Alkyls	257
2.11.4.1	M–C Bond Protonolysis	258
2.11.4.2	Cleavage by Halogens	259
2.11.4.3	Chalcogen Insertions	259
2.11.4.4	Cleavage by Lewis Acids	260

2.11.4.5	Cleavage by Oxidation	260
2.11.4.6	Hydrogenolysis of M–C Bonds	261
2.11.4.7	Insertion of Electrophilic Heterocumulenes	261
	Box 2.11.4.7 CO <sub>2</sub> utilization in synthesis	262
2.11.4.8	Insertion of NO	263
2.11.4.9	Insertion of CO	263
2.11.4.10	Insertion of Isocyanides	267
2.11.4.11	Insertion of Alkenes	268
2.11.4.12	Insertion of Alkynes	270
2.11.4.13	Reactions of Metal Alkyls with Non-Innocent Ligands	271
	Box 2.11.4.12 Transition metal alkyl complexes <i>in vivo</i>	272
	Key points	274
	Exercises	274
<b>2.12</b>	<b>Alkylidene Complexes</b>	<b>275</b>
	Box 2.12 NMR spectroscopy of metal carbenes	276
2.12.1	Synthesis of Alkylidene Complexes	276
2.12.1.1	Synthesis of Alkylidene Complexes in Low Oxidation States: Fischer Carbenes	276
2.12.1.2	Synthesis of Alkylidene Complexes in High Oxidation States (d <sup>0</sup> )	279
2.12.1.3	Vinylidene Complexes	281
	Box 2.12.1.3 Alkynyl–allenylidene rearrangements	282
2.12.2	Reactivity of Alkylidene Complexes	282
2.12.2.1	Reactions of Fischer Carbenes	282
	Box 2.12.2.1 The Dötz reaction	284
2.12.2.2	Reactions of d <sup>0</sup> Alkylidene Complexes	283
2.12.2.3	Ruthenium Carbene Complexes	288
	Box 2.12.2.3 Applications of Olefin Metathesis	289
	Key points	292
	Exercises	292
<b>2.13</b>	<b>Complexes with M≡C Triple Bonds: Carbynes</b>	<b>293</b>
2.13.1	Synthesis of Carbyne Complexes	293
2.13.2	Reactions of Carbyne Complexes	295
2.13.3	Bridging Carbene and Carbyne Complexes	296
	Key points	297
	Exercises	297
<b>3.</b>	<b>Homogeneous Catalysis with Organometallic Transition Metal Complexes</b>	<b>299</b>
3.1	General Considerations	301
3.2	Key Reaction Steps in Homogeneous Catalysis	304
3.2.1	Catalyst Activation	304
3.2.2	Oxidative Addition	305
3.2.3	Reductive Elimination	307
3.2.4	Nucleophilic Attack on Coordinated Substrates	309
	Key points	309
	Exercises	310

<b>3.3 Catalytic H–H and H–X Additions</b>	311
3.3.1 Hydrogenation	311
3.3.1.1 General Hydrogenation Catalysis	311
3.3.1.2 Arene Hydrogenation	314
3.3.1.3 Asymmetric Hydrogenation	315
Box 3.3.1.3 Applications of asymmetric hydrogenations	319
3.3.1.4 Transfer Hydrogenation	321
Box 3.3.1.4 Hydrogen storage molecules and H <sub>2</sub> release	322
3.3.1.5 Outer-Sphere Hydrogenation of Ketones	322
3.3.2 Hydrosilylation	323
3.3.3 Isomerizations	324
3.3.4 Hydrocyanation	325
Box 3.3.4 Applications of asymmetric hydrocyanation	328
3.3.5 Hydroamination	329
Key points	330
Exercises	331
<b>3.4 Catalytic Carbonylations</b>	332
3.4.1 Hydroformylation	332
3.4.2 Carbonylation Reactions	334
3.4.2.1 Alcohol Carbonylations	334
3.4.2.2 Alkene and Alkyne Carbonylations	336
Key points	339
Exercises	340
<b>3.5 Alkene Oxidations</b>	341
Key points	342
<b>3.6 Coupling Reactions</b>	343
3.6.1 C–C Cross-Coupling Reactions	344
3.6.2 C–N Cross-Coupling Reactions	345
3.6.3 Coupling Reactions with Carbonylation	345
3.6.4 Heck Arylations	346
Box 3.6.4 Mechanistic aspects of the Heck reaction	346
Key points	347
Exercises	347
<b>3.7 Alkene Polymerizations</b>	349
3.7.1 Ziegler Catalysts	349
3.7.1.1 Catalyst Composition	349
Box 3.7.1.1 Polymers and polymer structure	350
3.7.1.2 Mechanism of Ziegler Catalysts	353
3.7.2 Metal Complexes as Polymerization Catalysts	355
3.7.2.1 Catalyst Activation and Active Species	356
3.7.2.2 Alkene Polymerization Reactions	359
3.7.2.3 Stereoselective Polymerization	362
Box 3.7.2.3 Chain-shuttling polymerization	365
3.7.3 Alkene Oligomerizations	366
Key points	368
Exercises	368

## DETAILED CONTENTS

Appendix 1	Commonly Used Solvents and Their Properties	E.E	369
Appendix 2	Number and Symmetry of Infrared-Active Vibrations of Metal Carbonyl Complexes	E.E	373
Appendix 3	Answers to Exercises	E.E	374
Appendix 4	Further Reading	E.E	393
Index		A.E.E	405
		Box 3.1.1. Hydrides and Insertion of Hydrogen into Molecules	263
		3.1.1.1. Asymmetric Hydride Nucleophiles	263
		3.1.1.2. Box 3.1.1. Applications of Insertion Reactions	263
		3.1.1.3. Asymmetric Hydride Electrophiles	263
		3.1.1.4. Box 3.1.1. Applications of Insertion Reactions	263
		3.1.1.5. Out-of-Plane Hydride Shifts/Intramolecular	270

		3.10.4. Exercises	315
		3.11. Carbene Complexes	318
		3.11.1. Box 3.11.1. Applications of Carbene Complexes	318
		3.11.2. Key Points	318
		3.11.3. Box 3.11.3. Synthetic Carbene Complexes	318
		3.11.4. Exercises	318
		3.12. Metathesis	321
		3.12.1. Box 3.12.1. Applications of Metathesis	321
		3.12.2. Key Points	321
		3.12.3. Box 3.12.3. Synthetic Metathesis	321
		3.12.4. Exercises	321
		3.13. Cycloboranes	324
		3.13.1. Box 3.13.1. Applications of Cycloboranes	324
		3.13.2. Key Points	324
		3.13.3. Box 3.13.3. Synthetic Cycloboranes	324
		3.13.4. Exercises	324
		3.14. Cyclopropanes	327
		3.14.1. Box 3.14.1. Applications of Cyclopropanes	327
		3.14.2. Key Points	327
		3.14.3. Box 3.14.3. Synthetic Cyclopropanes	327
		3.14.4. Exercises	327
		3.15. Cyclohexadienes	330
		3.15.1. Box 3.15.1. Applications of Cyclohexadienes	330
		3.15.2. Key Points	330
		3.15.3. Box 3.15.3. Synthetic Cyclohexadienes	330
		3.15.4. Exercises	330
		3.16. Cyclohexadienyl Anions	333
		3.16.1. Box 3.16.1. Applications of Cyclohexadienyl Anions	333
		3.16.2. Key Points	333
		3.16.3. Box 3.16.3. Synthetic Cyclohexadienyl Anions	333
		3.16.4. Exercises	333
		3.17. Cyclohexadienyl Cations	336
		3.17.1. Box 3.17.1. Applications of Cyclohexadienyl Cations	336
		3.17.2. Key Points	336
		3.17.3. Box 3.17.3. Synthetic Cyclohexadienyl Cations	336
		3.17.4. Exercises	336
		3.18. Cyclohexadienyl Radical	339
		3.18.1. Box 3.18.1. Applications of Cyclohexadienyl Radical	339
		3.18.2. Key Points	339
		3.18.3. Box 3.18.3. Synthetic Cyclohexadienyl Radical	339
		3.18.4. Exercises	339
