

Table of Contents

Introduction

I. NEW NAMES FOR OLD

3

Easy words for hard ideas . . . Transcendental . . . Non-simple curve . . . Simple curve . . . Simple group . . . Bolsheviks and giraffes . . . Turbines . . . Turns and slides . . . Circles and cycles . . . Patho-circles . . . Clocks . . . Hexagons and parhexagons . . . Radicals, hyperradicals, and ultraradicals (nonpolitical) . . . New numbers for the nursery . . . Googol and googolplex . . . Miracle of the rising book . . . The mathescope.

II. BEYOND THE GOOGOL

27

Counting—the language of number . . . Counting, matching, and “Going to Jerusalem” . . . Cardinal numbers . . . Cosmic chess and googols . . . The sand reckoner . . . Mathematical induction . . . The infinite and its progeny . . . Zeno . . . Puzzles and quarrels . . . Bolzano . . . Galileo’s puzzle . . . Cantor . . . Measuring the measuring rod . . . The whole is no greater than some of its parts . . . The first transfinite—Aleph₀ . . . Arithmetic for morons . . . Common sense hits a snag . . . Cardinality of the continuum . . . Extravagances of a mathematical madman . . . The tortoise unmasked . . . Motionless motion . . . Private life of a number . . . The house that Cantor built.

III. π , i , e (PIE)

65

Chinamen and chandeliers . . . Twilight of common sense . . . π , i , e . . . Squaring the circle and its cousins . . . Mathematical impossibility . . . Silk purse, sow’s ear, ruler and compass . . . Rigor mortis . . . Algebraic equations and tran-

scendental numbers . . . Galois and Greek epidemics . . . Cube duplicators and angle trisectors . . . Biography of π . . . Infancy: Archimedes, the Bible, the Egyptians . . . Adolescence: Vieta, Van Ceulen . . . Maturity: Wallis, Newton, Leibniz . . . Old Age: Dase, Richter, Shanks . . . Victim of schizophrenia . . . Boon to insurance companies . . . (e) . . . Logarithms or tricks of the trade . . . Mr. Briggs is surprised . . . Mr. Napier explains . . . Biography of e ; or e , the banker's boon . . . Pituitary gland of mathematics: the exponential function . . . (i) . . . Humpty Dumpty, Doctor of Semantics . . . Imaginary numbers . . . The $\sqrt{-1}$, or "Where am I?" . . . Biography of i , the self-made amphibian . . . Omar Khayyám, Cardan, Bombelli, and Gauss . . . i and Soviet Russia . . . Program music of mathematics . . . Breakfast in bed; or, How to become a great mathematician . . . Analytic geometry . . . Geometric representation of i . . . Complex plane . . . A famous formula, faith, and humility.

IV. ASSORTED GEOMETRIES—PLANE AND FANCY 112

The talking fish and St. Augustine . . . *A new alphabet* . . . *High priests and mumbo jumbo* . . . *Pure and applied mathematics* . . . *Euclid and Texas* . . . *Mathematical tailors* . . . *Geometry—a game* . . . *Ghosts, table-tipping, and the land of the dead* . . . *Fourth-dimension flounders* . . . *Henry More to the rescue* . . . *Fourth dimension—a new gusher* . . . *A cure for arthritis* . . . *Syntax suffers a setback* . . . *The physicist's delight* . . . *Dimensions and manifolds* . . . *Distance formulae* . . . *Scaling blank walls* . . . *Four-dimensional geometry defined* . . . *Moles and tesseract* . . . *A four-dimensional fancy* . . . *Romance of flatland* . . . *Three-dimensional cats and two-dimensional kings* . . . *Gallant Gulliver and the gloves* . . . *Beguiling voices and strange footprints* . . . *Non-Euclidean geometry* . . . *Space credos and millinery* . . . *Private and public space* . . . *Rewriting our textbooks* . . . *The prince and the Boethians* . . . *The flexible fifth* . . . *The mathematicians unite—nothing to lose but their chains* . . . *Lobachevsky breaks a link* . . . *Riemann breaks another* . . . *Checks and double checks in mathematics* . . . *The tractrix and the pseudosphere* . . . *Great circles and bears* . . . *The skeptic persists—and is*

stepped on . . . Geodesics . . . Seventh Day Adventists . . . IV
 Curvature . . . Lobachevskian Eiffel Towers and Riemannian
 Holland Tunnels.

V. PASTIMES OF PAST AND PRESENT TIMES 156

*Puzzle acorns and mathematical oaks . . . Charlemagne and
 crossword puzzles . . . Mark Twain and the "farmer's daugh-
 ter" . . . The syntax of puzzles . . . Carolyn Flaubert and the
 cabin boy . . . A wolf, a goat, and a head of cabbage . . .
 Brides and cuckolds . . . I'll be switched . . . Poisson, the mis-
 fit . . . High finance; or, The international beer wolf . . .
 Lions and poker players . . . The decimal system . . . Casting
 out nines . . . Buddha, God, and the binary scale . . . The
 march of culture; or, Russia, the home of the binary system . . .
 The Chinese rings . . . The tower of Hanoi . . . The ritual of
 Benares: or, Charley horse in the Orient . . . Nim, Sissa Ben
 Dahir, and Josephus . . . Bismarck plays the boss . . . The 15
 puzzle plague . . . The spider and the fly . . . A nightmare of
 relatives . . . The magic square . . . Take a number from 1 to
 10 . . . Fermat's last theorem . . . Mathematics' lost legacy.*

VI. PARADOX LOST AND PARADOX REGAINED 193

*Great paradoxes and distant relatives . . . Three species of par-
 adox . . . Paradoxes strange but true . . . Wheels that move
 faster on top than on bottom . . . The cycloid family . . . The
 curse of transportation; or, How locomotives can't make up
 their minds . . . Reformation of geometry . . . Ensuing troubles
 . . . Point sets—the Arabian Nights of mathematics . . .
 Hausdorff spins a tall tale . . . Messrs. Banach and Tarski
 rub the magic lamp . . . Baron Munchhausen is stymied by a
 pea . . . Mathematical fallacies . . . Trouble from a bubble;
 or, Dividing by zero . . . The infinite—troublemaker par ex-
 cellence . . . Geometrical fallacies . . . Logical paradoxes—the
 folk tales of mathematics . . . Deluding dialectics of the poacher
 and the prince; of the introspective barber; of the number
 111777; of this book and Confucius; of the Hon. Bertrand
 Russell . . . Scylla and Charybdis; or, What shall poor mathe-
 matics do?*

VII. CHANCE AND CHANCEABILITY 223

The clue of the billiard cue . . . A little chalk, a lot of talk . . . Watson gets his leg pulled by probable inference . . . Finds it all absurdly simple . . . Passionate oysters, waltzing ducks, and the syllogism . . . The twilight of probability . . . Interesting behavior of a modest coin . . . Biological necessity and a pair of dice . . . What is probability? . . . A poll of views: a meteorologist, a bootlegger, a bridge player . . . The subjective view—based on insufficient reason, contains an element of truth . . . The jackasses on Mars . . . The statistical view . . . What happens will probably happen . . . Experimental eurythmics; or, Pitching pennies . . . Relative frequencies . . . The adventure of the dancing men . . . Scheherezade and John Wilkes Booth—a challenge to statistics . . . The red and the black . . . Charles Peirce predicts the weather . . . How far is “away”? . . . Herodotus explains . . . The calculus of chance . . . The benefits of gambling . . . De Mere and Pascal . . . Mr. Jevons omits an acknowledgment . . . The study of craps—the very guide of life . . . Dice, pennies, permutations, and combinations . . . Measuring probabilities . . . D’Alembert drops the ball . . . Count Buffon plays with a needle . . . The point . . . A black ball and a white ball . . . The binomial theorem . . . The calculus of probability re-examined . . . Found to rest on hypothesis . . . Laplace needs no hypothesis . . . Twits Napoleon, who does . . . The Marquis de Condorcet has high hopes . . . M. le Marquis omits a factor and loses his head . . . Fourier of the Old Guard . . . Dr. Darwin of the New . . . The syllogism scraps a standby . . . Mr. Socrates may not die . . . Ring out the old logic, ring in the new.

VIII. RUBBER-SHEET GEOMETRY 265

Seven bridges over a stein of beer . . . Euler shivers . . . Is warmed by news from home . . . Invents topology . . . Dissolves the dilemma of Sunday strollers . . . Babies’ cribs and Pythagoreans . . . Talismen and queer figures . . . Position is everything in topology . . . Da Vinci and Dali . . . Invariants . . . Transformations . . . The immutable derby . . . Competition for the caliph’s cup; or, Sifting out the suitors by

science . . . Mr. Jordan's theorem . . . Only seems idiotic . . .
 Deformed circles . . . Odd facts concerning Times Square and
 a balloonist's head . . . Eccentric deportment of several dis-
 tinguished gentlemen at Princeton . . . Their passion for pret-
 zels . . . Their delving in doughnuts . . . Enforced modesty of
 readers and authors . . . The ring . . . Lachrymose recital
 around a Paris pissoir . . . "Who staggered how many times
 around the walls of what?" . . . In and out the doughnut . . .
 Gastric surgery—from doughnut to sausage in a single cut . . .
N-dimensional pretzels . . . The Möbius strip . . . Just as
 black as it is painted . . . Foments industrial discontent . . .
 Never takes sides . . . Bane of painter and paintpot alike . . .
 The iron rings . . . Mathematical cotillion; or, How on earth
 do I get rid of my partner? . . . Topology—the pinnacle of
 perversity; or, Removing your vest without your coat . . . Down
 to earth—map coloring . . . Four-color problem . . . Euler's
 theorem . . . The simplest universal law . . . Brouwer's puz-
 zle . . . The search for invariants.

IX. CHANGE AND CHANGEABILITY

299

The calculus and cement . . . Meaning of change and rate of
 change . . . Zeno and the movies . . . "Flying Arrow" local—
 stops at all points . . . Geometry and genetics . . . The arith-
 metic men dig pits . . . Lamentable analogue of the boomerang
 . . . History of the calculus . . . Kepler . . . Fermat . . .
 Story of the great rectangle . . . Newton and Leibniz . . .
 Archimedes and the limit . . . Shrinking and swelling; or,
 "Will the circle go the limit?" . . . Brief dictionary of mathe-
 matics and physics . . . Military idyll; or, The speed of the
 falling bomb . . . The calculus at work . . . The derivative
 . . . Higher derivatives and radius of curvature . . . Laudable
 scholarship of automobile engineers . . . The third derivative
 as a shock absorber . . . The derivative finds its mate . . .
 Integration . . . Kepler and the bungholes . . . Measuring
 lengths; or, The yawning regress . . . Methods of approx-
 imation . . . Measuring areas under curves . . . Method of
 rectangular strips . . . The definite \int . . . Indefinite \int . . .
 One the inverse of the other . . . The outline of history and the
 descent of man; or, $y=e^x$. . . Sickly curves and orchidaceous
