Abbreviations and Acronyms	
Introduction	

SECTION 1: CAPTURE

1	Light and Photometry	1
	The Nature of Light	2
	Measuring Light Waves	2
	The Electromagnetic Spectrum	3
	The Visible Spectrum	4
	Spectral Power Distributions	6
	Solid-Object Sources and the Heat-Light Relationship	7
	Vapor Sources and the Effect of Electrical Discharge	7
	Luminescence, Fluorescence and Phosphorescence	9
	Methods of Measuring Light	10
	Intensity	10
	Flux	11
	Illuminance	12
	Luminance	14
	Color Temperature	16
	The Mired Scale	18
	Color Rendering Index	20
	The Color Quality Scale	21
	Describing the Appearance of Light	22
	The Polarization of Light	23
	Commonly Encountered Light Sources	24
	Sunlight	24
	Tungsten-Filament Lamps	26
	Tungsten-Halogen Lamps	27
	Fluorescent Lamps	27
	Compact Fluorescent Lamps	28
	High-Intensity Discharge Lamps	28
	Electronic Flash	29
	Light-Emitting Diodes	30
	Proof of Concept: Visualizing the Spectral Output of Light Sources	31

2	Photographic Optics	33
	Image Formation with a Pinhole	34
	Image Formation with a Lens	36
	Lens Focal Length	40
	Normal Focal Length	42
	Telephoto Focal Lengths	44
	Wide-Angle Focal Lengths	44
	Variable Focal Length	45
	The Relationship Between Focal Length and Perspective	46
	Focal Length and Image Size	46
	Object Distance and Image Size	46
	Focal Length and Object Distance	48
	Drawing Lens Diagrams	49
	Depth of Field	53
	Depth of Field Controls	56
	Depth of Field and F-Number	56
	Depth of Field and Object Distance	56
	Depth of Field and Focal Length	57
	Depth of Focus	57
	Specialty Lenses	58
	Macro Lenses	58
	Perspective Control Lenses	59
	Catadioptric Lenses	60
	Reversed Telephoto Wide-Angle Lenses	60
	Supplemental Lenses	61
	Extension Tubes and Teleconverters	61
	Lens Shortcomings and Aberrations	62
	Chromatic Aberration	62
	Spherical Aberration	63
	Diffraction	63
	Vignetting	64
	Bokeh	65
	Barrel and Pincushion Distortion	66
	Flare	66
	Proof of Concept: Focal Length, Subject Distance and Portraits	68
3	Digital Camera Technology	71
	The Single Lens Reflex Camera Design	72
	Recording Light with Digital Image Sensors	73
	Bayer Pattern Color Filter Array	74
	X-Trans Color Filter Array	74
	Camera Sensor Technologies	75

Charge-Coupled Device Sensor	75
Sparse Color Filter Array Sensor	76
Complementary Metal Oxide Semiconductor Sensor	76
Backside Illumination Detectors	78
Foveon Sensor	78
Image Sensor Sizes	78
Camera Sensor Resolution	81
Pixel Pitch	81
Image Bit Depth	81
Aliasing and Moiré Patterns	83
Apertures	84
Shutters	85
Leaf Shutters	85
Focal Plane Shutters	86
Electronic Shutters	87
Automatic Exposure and Metering	88
Automatic Focus	88
Phase Detection Autofocus	88
Contrast Detection Autofocus	89
Active Autofocus	89
Autofocus Points	89
Image Stabilization	90
Lens-Based Optical Image Stabilization	90
Camera-Based Image Stabilization	91
Electronic Image Stabilization	91
Camera Viewfinders	91
Optical Viewfinders	91
Electronic Viewfinders	92
Electronic Flash	93
Camera Form Factors and Characteristics	94
Single Lens Reflex Cameras	94
Medium Format Cameras	94
Rangefinders	95
View Cameras	95
Mirrorless Cameras	96
Compact Cameras	96
Mobile Phone Cameras	96
Action Cameras	97
Camera Storage Media	98
4 Photographic Exposure	101
Exposure Determination	102

Dictating Exposure Time with Shutter Speed	102
Dictating the Amount of Light with F-Number	104
Lens Speed	105
Dictating Effective Sensitivity with Gain and ISO	105
Exposure and Dynamic Range	107
Blooming	108
The Utility of Image Histograms	109
Histogram Interpretation	110
In-Camera versus Desktop Software Histograms	113
Exposure Value	113
Equivalent Exposure	113
The Image Capture/Exposure Sequence	114
Using a Neutral Reference Target	115
In-Camera Exposure Metering	115
Matrix or Evaluative Metering	116
Center-Weighted Metering	116
Spot Metering	116
Exposure Compensation	116
Automatic Exposure Behaviors	116
Handheld Light Metering	117
Alternative Metering Methods	117
Synchronizing Flash and Camera Exposure	118
Exposing to the Right	118
Bracketing Exposure	119
Setting White Balance	119
Proof of Concept: Optimizing Photographic Exposure with Low Light Shooting	122
5 Lens Filters	125
Transmittance, Opacity and Density	126
How Light is Filtered	127
The Filter Factor	128
Color Filters	129
Neutral Density Filters	130
Polarizing Filters	131
Ultraviolet and Infrared Filters	132
Spectrophotometric Absorption Curves	133
Proof of Concept: Constructing Color Images Using Color Separations	134
6 Motion Video Fundamentals	137
Motion Perception and Memory	138
Persistent Images	138

Afterimages	139
Visual Memory	139
Defining Motion Video and its Parameters	140
Frame Rate	140
Shutter Angle	142
Resolution	143
Aspect Ratio	144
Video Formats and Encoding Strategies	145
Intraframe and Interframe Encoding	146
Chroma Subsampling	148
Video Codecs	148
Motion JPEG	149
MPEG-4 Advanced Video Coding (H.264)	149
High Efficiency Video Coding (H.265)	149
VP9	149
AOMedia Video 1 (AV1)	150
Audio in Video	150
Bitrate and File Size	150
Video Quality Artifacts	151
Blocking	151
Packet Loss	152
Ringing	152
Mosquito Noise	152
Color Bleeding	152
Jerkiness	153
Emerging Trends in Motion Video	153
Wide Color Gamut and High Dynamic Range	153
Short Form or Micro Video	153
Immersive Video	153

SECTION 2: PROCESS

7 Demosaicing and Interpolation	157
Contents of a Raw File	158
Image Interpolation	158
Demosaicing Image Data	160
Processing Steps Following Demosaicing	161
Exposure Adjustment	161
Color Space Mapping	161
Gamma Correction	162
Noise Reduction	162

Anti-Aliasing Filter	163
Sharpening	163
Reinterpreting Raw with New Algorithms	163
Resampling an Image	163
Nearest Neighbor Interpolation	164
Bilinear Interpolation	165
Bicubic Interpolation	165
The Life Cycle of Image Pixel Data	166
8 Digital Asset Management	167
Defining Image Data	168
Image Data and Quality	168
Image File Formats	169
Raw	169
DNG	170
JPEG	170
TIFF	171
BMP	172
GIF	172
PNG	172
HEIF	172
Proprietary Editing Software Formats	173
Why Raw Works for Digital Asset Management	173
The Photographic Workflow	175
Image Ingestion	175
Naming Files	176
Cataloging Software	177
Image Editing	178
Metadata and Keywords	179
Image Data and File Sizes	180
File Storage Options	181
Optical Disc Media	182
Hard Disk Drives	182
Solid State Drives	183
Disk Configurations	183
Backup Solutions	184
Remote Server File Hosting and Storage Services	185
Data Recovery	185
Avenues for Data Transfer	185
Data Transfer Connection Standards	186
Computer Workstation Hardware	188
Central Processing Unit	188

Anti-Aliasing Filter	163
Sharpening	163
Reinterpreting Raw with New Algorithms	163
Resampling an Image	163
Nearest Neighbor Interpolation	164
Bilinear Interpolation	165
Bicubic Interpolation	165
The Life Cycle of Image Pixel Data	166
8 Digital Asset Management	167
Defining Image Data	168
Image Data and Quality	168
Image File Formats	169
Raw	169
DNG	170
JPEG	170
TIFF	171
BMP	172
GIF	172
PNG	172
HEIF	172
Proprietary Editing Software Formats	173
Why Raw Works for Digital Asset Management	173
The Photographic Workflow	175
Image Ingestion	175
Naming Files	176
Cataloging Software	177
Image Editing	178
Metadata and Keywords	179
Image Data and File Sizes	180
File Storage Options	181
Optical Disc Media	182
Hard Disk Drives	182
Solid State Drives	183
Disk Configurations	183
Backup Solutions	184
Remote Server File Hosting and Storage Services	185
Data Recovery	185
Avenues for Data Transfer	185
Data Transfer Connection Standards	186
Computer Workstation Hardware	188
Central Processing Unit	188

Graphics Processing Unit	188
Random Access Memory	188
Storage Drives	189
Proof of Concept: Considering File Types and Image Content	189
9 Digital Tone Reproduction	193
Objective and Subjective Tone Reproduction	194
The Evolution of Tone Reproduction	195
Revisiting the Image Histogram	196
Interpreting the Tone Curve	199
Using the Curves Tool to Modify Tones	199
Inverting Tones for Negative Film Scans	201
The Zero-Sum Game of Tone Reproduction	202
Using the Levels Tool to Modify Tones	203
Common Tone Reproduction Software Controls	204
Color Correction and the ColorChecker	205
Color Balancing Using Color Channel Curves	206
Split Toning	208
Proof of Concept: Color Correcting Film Scans using Curves	208
10 Software Filters	213
Sharpening an Image	214
Blurring an Image	218
Blending Images	219
Black and White Conversion	221
Digital Filtering for Special Effect	222
Filter Masking	223
Proof of Concept: Reproducing an Aesthetic Filter Process	225
11 Camera Characterization and Image Quality	229
The Imaging Pipeline	230
The Many Tasks of the Image Signal Processor	230
ISP Task: Auto White Balance	231
ISP Task: Black Level Subtraction	232
ISP Task: Stuck Pixels	232
ISP Task: Demosaicing	232
ISP Task: Compressing and Saving	232
ISP Task: Video Recording	232
Characterizing a Camera	233
Testing Sensor Linearity	233

Evaluating Bright and Low Light Performance	234
Categorizing Image Noise	234
Fixed Pattern Noise	235
Dark Noise	236
Read Noise	236
Photon Noise	236
Signal to Noise Ratio	236
Delineating Noise from Graininess	237
Considering Sensor Dynamic Range	238
Identifying Non-Uniformities	239
Evaluating Lens Quality: Sharpness and Detail	241
Modulation Transfer Function	241
Interpreting an MTF Plot	241
Shooting to Evaluate Image Definition	242
Assessing Color Accuracy	243
Calculating Color Difference	243
White Balance Accuracy	244
Calibrating Autofocus	245
Considering Your Imaging Tools	246
Proof of Concept: Comparing Noise Characteristics of Two Cameras	246

12 Image Compression 249

Image Compression and Information Theory	250
The Basic Stages of Image Compression	251
Finding Redundancies in Image Data	251
Spatial or Interpixel Redundancy	251
Coding Redundancy	252
Psychovisual Redundancy	252
Temporal Redundancy	253
Compression and Scene Content	253
Lossless Compression Approaches for Removing Spatial Redundancy	253
Run-Length Encoding	253
Bit-Plane Encoding	254
Differential Encoding	255
Lossless Compression Approaches for Removing Coding Redundancy	255
Huffman Coding	255
Lempel–Ziv–Welch Compression	256
The $YCbCr$ Color Space	257
Compressing Color	258
Using Discrete Cosine Transforms to Compress	259
JPEG Compression	260
Common Image Compression Artifacts	261

Blocking Artifacts	262
Ringing Artifacts	262
Posterization	262
Color Bleeding	263
Generation Loss	263

SECTION 3: OUTPUT

13 Color Vision and Systems

265

Sensing Light with the Human Eye	266
Color Vision Theories	268
Testing Color Vision	269
Color Vision Deficiencies	270
Methods of Creating Color	271
Additive Mixing	271
Subtractive Mixing	272
Metamerism's Role in Color Reproduction	274
Partitive Mixing	275
Defining Color with Color Specification Systems	276
The Pantone System of Color Specification	277
The Munsell System of Color Specification	277
The CIE System of Color Specification	279
The CIE Chromaticity Diagram	280
CIELAB Space	281
The Roles of Light and Color on Perception and Perspective	282
Light Adaptation	282
Color Contrast	283
Linear Perspective	284
Color and Perceived Distance	285
Shape and Dimension	285
Size and Relative Size	287
Depth of Field	288
Lighting	288
Overlap	288
Aerial Haze	288
Texture	288
Proof of Concept: Looking Closely at Additive Color Mixing on Displays	288

14 Color Management

291

Why Color Management Matters	292
------------------------------	-----

Who Governs Color Management?	292
Reviewing Color Data Concepts	292
Color Space Types	293
sRGB, Adobe RGB and ProPhoto RGB	294
Pointer's Gamut	294
Revisiting the ColorChecker	294
Defining Characterization and Calibration	295
Color Management Systems	295
The ICC Profile	296
Canned Profiles	297
The iccMAX Profile	297
CMYK Profiles	297
Converting or Assigning Profiles	298
Creating Profiles with Color Measurement Tools	298
Input Profiles for Cameras or Scanners	298
Display Device Profiles	299
Printer Profiles	300
Gamut Handling and the Profile Connection Space	300
Rendering Intents	301
Evaluating Color Reproduction	302
Measuring and Comparing Color	302
Color Correction	303
Establishing an Appropriate Workspace Setup	304
Soft Proofing with Profiles	305
A Soft Proofing Workflow	305
15 Display Technology	307
Relevant Display Technologies for Photographers	308
Cathode Ray Tube	308
Liquid Crystal Display	308
Organic Light-Emitting Diode	311
Quantum Dot	311
Display Connection Standards	312
Display Resolution	312
Aspect Ratio and Screen Size	312
Refresh Rates and Response Time	313
Display Dynamic Range, Brightness and Bit Depth	314
Display Color Gamut	315
Defining the Display Viewing Conditions	316
Viewing Angle	316
Viewing Distance	317
Calibration and Configuration for Color Management	318

Recommended Settings and Conditions	318
Display Profile Characteristics	318
Emerging Display Trends and Applications	319
Night Modes and Reduced Blue Light Exposure	319
Electronic Viewfinders	320
Head Mounted Displays	320
Proof of Concept: Documenting the Growth in Mobile Device Display Capabilities	320
16 Printing and Physical Media	323
The Fundamentals of Printing	324
Pixels Per Inch and Dots Per Inch	324
Continuous Tone and Halftone Printing	325
Printer Technologies	326
Inkjet Printing	326
Photosensitive Light Writing Printing	329
Electrophotographic Printing with Dry Toners	329
Electrophotographic Printing with Liquid Toners	329
Thermal Dye-Diffusion Printing	329
Dye Sublimation Printing	330
Ink Technology	331
Aqueous Inkjet Inks	331
Solvent Inks	332
Ultraviolet Curable Inks	332
Latex Inks	333
Dye Sublimation Inks	333
Printing Substrates	334
Aqueous Inkjet Substrates	334
Chromogenic Substrates	335
Liquid Toner Substrates	336
Dry Toner Substrates	336
Dye Sublimation Substrates	337
Photo Paper Characteristics	337
Paper Weight and Thickness	337
Surface Sheen	338
Surface Texture	338
Brightness and Optical Brightening Agents	339
Mineral Whiteners	339
Paper White Point	339
Understanding Printer Settings	339
Photo Black and Matte Black Inks	339
Printhead Height	340
Printing Bit Depth	340

Super MicroWeave and Finest Detail	340
High-Speed Printing	340
Output Resolution	341
Printer Drivers	342
Print Size and Viewing Distance	342
Raster Image Processing	343
Hard Proofing	343
Printing Issues	344
Evaluating Paper and Print Quality	345
Testing for OBAs	346
Measuring Color Gamut and White Point	346
Measuring Black Point Density and Gloss	347
Critically Evaluating Color and Contrast	348
Index	351
