

Contents

1	Introducing the f-elements	1
1.1	Introduction	1
1.2	Abundance and distribution of the elements	2
1.3	The elements	6
1.4	Relativity and the f-elements	6
1.5	f-orbitals	7
1.6	Electron configurations	9
1.7	Metallic and ionic radii	10
1.8	Ionization potentials and oxidation states for Ln	13
1.9	Ionization potentials and oxidation states for An	14
1.10	Summary	16
1.11	Exercises	16
2	Electronic structure, magnetism, and spectroscopy	17
2.1	Introduction	17
2.2	Deriving term symbols for f-element ions	17
2.3	Magnetic properties	21
2.4	NMR spectroscopy of paramagnetic f-element complexes	24
2.5	Electronic absorption spectroscopy	26
2.6	Lanthanoid ion luminescence	28
2.7	Summary	32
2.8	Exercises	32
2.9	Further reading	34
3	Binary compounds: oxides and halides	35
3.1	Introduction	35
3.2	Lanthanoid oxides	35
3.3	Actinoid oxides	38
3.4	Lanthanoid halides	39
3.5	Actinoid halides	42
3.6	Summary	43
3.7	Exercises	43
3.8	Further reading	44

4 Coordination chemistry	45
4.1 Introduction	45
4.2 Lanthanoid and actinoid ions in aqueous solution	46
4.3 Kinetics of complex formation in aqueous solution	50
4.4 Thermodynamics of complex formation in aqueous solution	51
4.5 Complexes that are thermodynamically stable in aqueous solution	53
4.6 Complexes that are kinetically inert in aqueous solution	55
4.7 Complexes with neutral O-donor ligands	56
4.8 Complexes with neutral N-donor ligands	59
4.9 Complexes with anionic O-donor ligands	61
4.10 Complexes with anionic N-donors	67
4.11 Complexes with soft donor ligands	71
4.12 Summary	74
4.13 Exercises	75
4.14 Further reading	76
5 Organometallic chemistry	77
5.1 Introduction	77
5.2 Homoleptic σ -bonded alkyl and aryl complexes	77
5.3 Homoleptic cyclopentadienyl complexes	80
5.4 Bonding in $[\text{Cp}_3\text{Ln}]$ and $[\text{Cp}_3\text{An}]$	84
5.5 Comparison of Lewis acidity of $[\text{Cp}_3\text{Ln}]$ and $[\text{Cp}_3\text{An}]$	85
5.6 Cyclooctatetraenyl (COT^{2-}) complexes	86
5.7 Complexes with neutral arenes	87
5.8 Heteroleptic organometallic complexes	89
5.9 Reactivity of σ -bonded alkyls of lanthanoids and actinoids	91
5.10 Catalytic reactions	93
5.11 Summary	96
5.12 Exercises	97
5.13 Further reading	97
6 Applications	98
6.1 Introduction	98
6.2 Lanthanoids in heterogeneous catalysis	99
6.3 CeO_2 in glass polishing	100
6.4 Rare earth magnets	100
6.5 Gadolinium in MRI contrast agents	102

6.6	Rare earth phosphors in lighting and displays	104
6.7	Luminescent lanthanoid complexes in bioassays	105
6.8	The Nd:YAG laser	106
6.9	Rare earths in alloys for rechargeable Ni/MH batteries	107
6.10	Nd in polymerization catalysis: synthesis of 1,4-cis polybutadiene (Nd-BR)	108
6.11	Lanthanoids as catalysts and reagents for organic synthesis	109
6.12	Actinoids in nuclear power	112
6.13	^{241}Am in smoke detectors	114
6.14	^{238}Pu in power supplies	115
6.15	Summary	115
6.16	Exercises	115
6.17	Further reading	117
7	Extraction and purification of lanthanoids and actinoids	118
7.1	Introduction	118
7.2	Extraction and separation of the lanthanoids and yttrium	118
7.3	Extraction of the actinoids	123
7.4	Isotopic enrichment of uranium	124
7.5	Recycling of spent nuclear fuel	127
7.6	Summary	129
7.7	Exercises	130
7.8	Further reading	130
	Glossary	131
	Index	133

Y, Th, U, and Pu are all named after the mythological figure of Ymir, near Scandinavia.
