<b>Preface</b>	xix
<b>Preface to the First Edition</b>	xxi
<b>1 Preliminaries</b>	1
1.1 Probability and Bayes' Theorem	1
1.1.1 Notation	1
1.1.2 Axioms for probability	2
1.1.3 'Unconditional' probability	5
1.1.4 Odds	6
1.1.5 Independence	7
1.1.6 Some simple consequences of the axioms; Bayes' Theorem	7
1.2 Examples on Bayes' Theorem	9
1.2.1 The Biology of Twins	9
1.2.2 A political example	10
1.2.3 A warning	10
1.3 Random variables	12
1.3.1 Discrete random variables	12
1.3.2 The binomial distribution	13
1.3.3 Continuous random variables	14
1.3.4 The normal distribution	16
1.3.5 Mixed random variables	17
1.4 Several random variables	17
1.4.1 Two discrete random variables	17
1.4.2 Two continuous random variables	18
1.4.3 Bayes' Theorem for random variables	20
1.4.4 Example	21
1.4.5 One discrete variable and one continuous variable	21
1.4.6 Independent random variables	22
1.5 Means and variances	23
1.5.1 Expectations	23
1.5.2 The expectation of a sum and of a product	24
1.5.3 Variance, precision and standard deviation	25

1.5.4 Examples	25	2.9.3 Sufficiency principle	63
1.5.5 Variance of a sum; covariance and correlation	27	2.9.4 Examples	63
1.5.6 Approximations to the mean and variance of a function of a random variable	28	2.9.5 Order statistics and minimal sufficient statistics	65
1.5.7 Conditional expectations and variances	29	2.9.6 Examples on minimal sufficiency	66
1.5.8 Medians and modes	31	2.10 Conjugate prior distributions	67
1.6 Exercises on Chapter 1	31	2.10.1 Definition and difficulties	67
<b>2 Bayesian inference for the normal distribution</b>	<b>36</b>	2.10.2 Examples	68
2.1 Nature of Bayesian inference	36	2.10.3 Mixtures of conjugate densities	69
2.1.1 Preliminary remarks	36	2.10.4 Is your prior really conjugate?	71
2.1.2 Post is prior times likelihood	36	2.11 The exponential family	71
2.1.3 Likelihood can be multiplied by any constant	38	2.11.1 Definition	71
2.1.4 Sequential use of Bayes' Theorem	38	2.11.2 Examples	72
2.1.5 The predictive distribution	39	2.11.3 Conjugate densities	72
2.1.6 A warning	39	2.11.4 Two-parameter exponential family	73
2.2 Normal prior and likelihood	40	2.12 Normal mean and variance both unknown	73
2.2.1 Posterior from a normal prior and likelihood	40	2.12.1 Formulation of the problem	73
2.2.2 Example	42	2.12.2 Marginal distribution of the mean	75
2.2.3 Predictive distribution	43	2.12.3 Example of the posterior density for the mean	76
2.2.4 The nature of the assumptions made	44	2.12.4 Marginal distribution of the variance	77
2.3 Several normal observations with a normal prior	44	2.12.5 Example of the posterior density of the variance	77
2.3.1 Posterior distribution	44	2.12.6 Conditional density of the mean for given	
2.3.2 Example	46	variance	77
2.3.3 Predictive distribution	47	2.13 Conjugate joint prior for the normal distribution	78
2.3.4 Robustness	47	2.13.1 The form of the conjugate prior	78
2.4 Dominant likelihoods	48	2.13.2 Derivation of the posterior	80
2.4.1 Improper priors	48	2.13.3 Example	81
2.4.2 Approximation of proper priors by improper priors	49	2.13.4 Concluding remarks	82
2.5 Locally uniform priors	50	2.14 Exercises on Chapter 2	82
2.5.1 Bayes' postulate	50	<b>3 Some other common distributions</b>	<b>85</b>
2.5.2 Data translated likelihoods	52	3.1 The binomial distribution	85
2.5.3 Transformation of unknown parameters	52	3.1.1 Conjugate prior	85
2.6 Highest density regions	54	3.1.2 Odds and log-odds	88
2.6.1 Need for summaries of posterior information	54	3.1.3 Highest density regions	90
2.6.2 Relation to classical statistics	55	3.1.4 Example	91
2.7 Normal variance	55	3.1.5 Predictive distribution	92
2.7.1 A suitable prior for the normal variance	55	3.2 Reference prior for the binomial likelihood	92
2.7.2 Reference prior for the normal variance	58	3.2.1 Bayes' postulate	92
2.8 HDRs for the normal variance	59	3.2.2 Haldane's prior	93
2.8.1 What distribution should we be considering?	59	3.2.3 The arc-sine distribution	94
2.8.2 Example	60	3.2.4 Conclusion	95
2.9 The role of sufficiency	60	3.3 Jeffreys' rule	96
2.9.1 Definition of sufficiency	60	3.3.1 Fisher's information	96
2.9.2 Neyman's factorization theorem	61	3.3.2 The information from several observations	97

3.3.4	Examples	98
3.3.5	Warning	100
3.3.6	Several unknown parameters	100
3.3.7	Example	101
3.4	The Poisson distribution	102
3.4.1	Conjugate prior	102
3.4.2	Reference prior	103
3.4.3	Example	104
3.4.4	Predictive distribution	104
3.5	The uniform distribution	106
3.5.1	Preliminary definitions	106
3.5.2	Uniform distribution with a fixed lower endpoint	107
3.5.3	The general uniform distribution	108
3.5.4	Examples	110
3.6	Reference prior for the uniform distribution	110
3.6.1	Lower limit of the interval fixed	110
3.6.2	Example	111
3.6.3	Both limits unknown	111
3.7	The tramcar problem	113
3.7.1	The discrete uniform distribution	113
3.8	The first digit problem; invariant priors	114
3.8.1	A prior in search of an explanation	114
3.8.2	The problem	114
3.8.3	A solution	115
3.8.4	Haar priors	117
3.9	The circular normal distribution	117
3.9.1	Distributions on the circle	117
3.9.2	Example	119
3.9.3	Construction of an HDR by numerical integration	120
3.9.4	Remarks	122
3.10	Approximations based on the likelihood	122
3.10.1	Maximum likelihood	122
3.10.2	Iterative methods	123
3.10.3	Approximation to the posterior density	123
3.10.4	Examples	124
3.10.5	Extension to more than one parameter	126
3.10.6	Example	127
3.11	Reference posterior distributions	128
3.11.1	The information provided by an experiment	128
3.11.2	Reference priors under asymptotic normality	130
3.11.3	Uniform distribution of unit length	131
3.11.4	Normal mean and variance	132
3.11.5	Technical complications	134
3.12	Exercises on Chapter 3	134

4	Hypothesis testing	138
4.1	Hypothesis testing	138
4.1.1	Introduction	138
4.1.2	Classical hypothesis testing	138
4.1.3	Difficulties with the classical approach	139
4.1.4	The Bayesian approach	140
4.1.5	Example	142
4.1.6	Comment	143
4.2	One-sided hypothesis tests	143
4.2.1	Definition	143
4.2.2	$P$ -values	144
4.3	Lindley's method	145
4.3.1	A compromise with classical statistics	145
4.3.2	Example	145
4.3.3	Discussion	146
4.4	Point (or sharp) null hypotheses with prior information	146
4.4.1	When are point null hypotheses reasonable?	146
4.4.2	A case of nearly constant likelihood	147
4.4.3	The Bayesian method for point null hypotheses	148
4.4.4	Sufficient statistics	149
4.5	Point null hypotheses for the normal distribution	150
4.5.1	Calculation of the Bayes' factor	150
4.5.2	Numerical examples	151
4.5.3	Lindley's paradox	152
4.5.4	A bound which does not depend on the prior distribution	154
4.5.5	The case of an unknown variance	155
4.6	The Doogian philosophy	157
4.6.1	Description of the method	157
4.6.2	Numerical example	157
4.7	Exercises on Chapter 4	158
5	Two-sample problems	162
5.1	Two-sample problems – both variances unknown	162
5.1.1	The problem of two normal samples	162
5.1.2	Paired comparisons	162
5.1.3	Example of a paired comparison problem	163
5.1.4	The case where both variances are known	163
5.1.5	Example	164
5.1.6	Non-trivial prior information	165
5.2	Variances unknown but equal	165
5.2.1	Solution using reference priors	165
5.2.2	Example	167
5.2.3	Non-trivial prior information	167

5.3	Variances unknown and unequal (Behrens–Fisher problem)	168
5.3.1	Formulation of the problem	168
5.3.2	Patil's approximation	169
5.3.3	Example	170
5.3.4	Substantial prior information	170
5.4	The Behrens–Fisher controversy	171
5.4.1	The Behrens–Fisher problem from a classical standpoint	171
5.4.2	Example	172
5.4.3	The controversy	173
5.5	Inferences concerning a variance ratio	173
5.5.1	Statement of the problem	173
5.5.2	Derivation of the F distribution	174
5.5.3	Example	175
5.6	Comparison of two proportions; the $2 \times 2$ table	176
5.6.1	Methods based on the log-odds ratio	176
5.6.2	Example	177
5.6.3	The inverse root-sine transformation	178
5.6.4	Other methods	178
5.7	Exercises on Chapter 5	179
<b>6</b>	<b>Correlation, regression and the analysis of variance</b>	<b>182</b>
6.1	Theory of the correlation coefficient	182
6.1.1	Definitions	182
6.1.2	Approximate posterior distribution of the correlation coefficient	184
6.1.3	The hyperbolic tangent substitution	186
6.1.4	Reference prior	188
6.1.5	Incorporation of prior information	189
6.2	Examples on the use of the correlation coefficient	189
6.2.1	Use of the hyperbolic tangent transformation	189
6.2.2	Combination of several correlation coefficients	189
6.2.3	The squared correlation coefficient	190
6.3	Regression and the bivariate normal model	190
6.3.1	The model	190
6.3.2	Bivariate linear regression	191
6.3.3	Example	193
6.3.4	Case of known variance	194
6.3.5	The mean value at a given value of the explanatory variable	194
6.3.6	Prediction of observations at a given value of the explanatory variable	195
6.3.7	Continuation of the example	195
6.3.8	Multiple regression	196
6.3.9	Polynomial regression	196

6.4	Conjugate prior for the bivariate regression model	197
6.4.1	The problem of updating a regression line	197
6.4.2	Formulae for recursive construction of a regression line	197
6.4.3	Finding an appropriate prior	199
6.5	Comparison of several means – the one way model	200
6.5.1	Description of the one way layout	200
6.5.2	Integration over the nuisance parameters	201
6.5.3	Derivation of the F distribution	203
6.5.4	Relationship to the analysis of variance	203
6.5.5	Example	204
6.5.6	Relationship to a simple linear regression model	206
6.5.7	Investigation of contrasts	207
6.6	The two way layout	209
6.6.1	Notation	209
6.6.2	Marginal posterior distributions	210
6.6.3	Analysis of variance	212
6.7	The general linear model	212
6.7.1	Formulation of the general linear model	212
6.7.2	Derivation of the posterior	214
6.7.3	Inference for a subset of the parameters	215
6.7.4	Application to bivariate linear regression	216
6.8	Exercises on Chapter 6	217
<b>7</b>	<b>Other topics</b>	<b>221</b>
7.1	The likelihood principle	221
7.1.1	Introduction	221
7.1.2	The conditionality principle	222
7.1.3	The sufficiency principle	223
7.1.4	The likelihood principle	223
7.1.5	Discussion	225
7.2	The stopping rule principle	226
7.2.1	Definitions	226
7.2.2	Examples	226
7.2.3	The stopping rule principle	227
7.2.4	Discussion	228
7.3	Informative stopping rules	229
7.3.1	An example on capture and recapture of fish	229
7.3.2	Choice of prior and derivation of posterior	230
7.3.3	The maximum likelihood estimator	231
7.3.4	Numerical example	231
7.4	The likelihood principle and reference priors	232
7.4.1	The case of Bernoulli trials and its general implications	232
7.4.2	Conclusion	233

7.5	Bayesian decision theory	234	9	<b>The Gibbs sampler and other numerical methods</b>	281
7.5.1	The elements of game theory	234	9.1	Introduction to numerical methods	281
7.5.2	Point estimators resulting from quadratic loss	236	9.1.1	Monte Carlo methods	281
7.5.3	Particular cases of quadratic loss	237	9.1.2	Markov chains	282
7.5.4	Weighted quadratic loss	238	9.2	The <i>EM</i> algorithm	283
7.5.5	Absolute error loss	238	9.2.1	The idea of the <i>EM</i> algorithm	283
7.5.6	Zero-one loss	239	9.2.2	Why the <i>EM</i> algorithm works	285
7.5.7	General discussion of point estimation	240	9.2.3	Semi-conjugate prior with a normal likelihood	287
7.6	Bayes linear methods	240	9.2.4	The <i>EM</i> algorithm for the hierarchical normal model	288
7.6.1	Methodology	240	9.2.5	A particular case of the hierarchical normal model	290
7.6.2	Some simple examples	241	9.3	Data augmentation by Monte Carlo	291
7.6.3	Extensions	243	9.3.1	The genetic linkage example revisited	291
7.7	Decision theory and hypothesis testing	243	9.3.2	Use of R	291
7.7.1	Relationship between decision theory and classical hypothesis testing	243	9.3.3	The genetic linkage example in R	292
7.7.2	Composite hypotheses	245	9.3.4	Other possible uses for data augmentation	293
7.8	Empirical Bayes methods	245	9.4	The Gibbs sampler	294
7.8.1	Von Mises' example	245	9.4.1	Chained data augmentation	294
7.8.2	The Poisson case	246	9.4.2	An example with observed data	296
7.9	Exercises on Chapter 7	247	9.4.3	More on the semi-conjugate prior with a normal likelihood	299
8	<b>Hierarchical models</b>	253	9.4.4	The Gibbs sampler as an extension of chained data augmentation	301
8.1	The idea of a hierarchical model	253	9.4.5	An application to change-point analysis	302
8.1.1	Definition	253	9.4.6	Other uses of the Gibbs sampler	306
8.1.2	Examples	254	9.4.7	More about convergence	309
8.1.3	Objectives of a hierarchical analysis	257	9.5	Rejection sampling	311
8.1.4	More on empirical Bayes methods	257	9.5.1	Description	311
8.2	The hierarchical normal model	258	9.5.2	Example	311
8.2.1	The model	258	9.5.3	Rejection sampling for log-concave distributions	311
8.2.2	The Bayesian analysis for known overall mean	259	9.5.4	A practical example	313
8.2.3	The empirical Bayes approach	261	9.6	The Metropolis–Hastings algorithm	317
8.3	The baseball example	262	9.6.1	Finding an invariant distribution	317
8.4	The Stein estimator	264	9.6.2	The Metropolis–Hastings algorithm	318
8.4.1	Evaluation of the risk of the James–Stein estimator	267	9.6.3	Choice of a candidate density	320
8.5	Bayesian analysis for an unknown overall mean	268	9.6.4	Example	321
8.5.1	Derivation of the posterior	270	9.6.5	More realistic examples	322
8.6	The general linear model revisited	272	9.6.6	Gibbs as a special case of Metropolis–Hastings	322
8.6.1	An informative prior for the general linear model	272	9.6.7	Metropolis within Gibbs	323
8.6.2	Ridge regression	274	9.7	Introduction to WinBUGS and OpenBUGS	323
8.6.3	A further stage to the general linear model	275	9.7.1	Information about WinBUGS and OpenBUGS	323
8.6.4	The one way model	276	9.7.2	Distributions in WinBUGS and OpenBUGS	324
8.6.5	Posterior variances of the estimators	277	9.7.3	A simple example using WinBUGS	324
8.7	Exercises on Chapter 8	277	9.7.4	The pump failure example revisited	327
			9.7.5	DoodleBUGS	327

9.7.6	coda	329
9.7.7	R2WinBUGS and R2OpenBUGS	329
9.8	Generalized linear models	332
9.8.1	Logistic regression	332
9.8.2	A general framework	334
9.9	Exercises on Chapter 9	335

**10 Some approximate methods**

10.1	Bayesian importance sampling	340
10.1.1	Importance sampling to find HDRs	343
10.1.2	Sampling importance re-sampling	344
10.1.3	Multidimensional applications	344
10.2	Variational Bayesian methods: simple case	345
10.2.1	Independent parameters	347
10.2.2	Application to the normal distribution	349
10.2.3	Updating the mean	350
10.2.4	Updating the variance	351
10.2.5	Iteration	352
10.2.6	Numerical example	352
10.3	Variational Bayesian methods: general case	353
10.3.1	A mixture of multivariate normals	353
10.4	ABC: Approximate Bayesian Computation	356
10.4.1	The ABC rejection algorithm	356
10.4.2	The genetic linkage example	358
10.4.3	The ABC Markov Chain Monte Carlo algorithm	360
10.4.4	The ABC Sequential Monte Carlo algorithm	362
10.4.5	The ABC local linear regression algorithm	365
10.4.6	Other variants of ABC	366
10.5	Reversible jump Markov chain Monte Carlo	367
10.5.1	RJMCMC algorithm	367
10.6	Exercises on Chapter 10	369

**Appendix A Common statistical distributions**

A.1	Normal distribution	374
A.2	Chi-squared distribution	375
A.3	Normal approximation to chi-squared	376
A.4	Gamma distribution	376
A.5	Inverse chi-squared distribution	377
A.6	Inverse chi distribution	378
A.7	Log chi-squared distribution	379
A.8	Student's t distribution	380
A.9	Normal/chi-squared distribution	381
A.10	Beta distribution	382
A.11	Binomial distribution	383
A.12	Poisson distribution	384

A.13	Negative binomial distribution	385
A.14	Hypergeometric distribution	386
A.15	Uniform distribution	387
A.16	Pareto distribution	388
A.17	Circular normal distribution	389
A.18	Behrens' distribution	391
A.19	Snedecor's F distribution	393
A.20	Fisher's z distribution	393
A.21	Cauchy distribution	394
A.22	The probability that one beta variable is greater than another	395
A.23	Bivariate normal distribution	395
A.24	Multivariate normal distribution	396
A.25	Distribution of the correlation coefficient	397

**Appendix B Tables**

B.1	Percentage points of the Behrens–Fisher distribution	399
B.2	Highest density regions for the chi-squared distribution	402
B.3	HDRs for the inverse chi-squared distribution	404
B.4	Chi-squared corresponding to HDRs for log chi-squared	406
B.5	Values of F corresponding to HDRs for log F	408

**Appendix C R programs**

430

**Appendix D Further reading**

D.1	Robustness	436
D.2	Nonparametric methods	436
D.3	Multivariate estimation	436
D.4	Time series and forecasting	437
D.5	Sequential methods	437
D.6	Numerical methods	437
D.7	Bayesian networks	437
D.8	General reading	438

*Note:* The tables in the Appendix are intended for use in conjunction with a standard set of statistical tables, for example, Lindley and Scott (1995) or Neave (1978). They extend the coverage of these tables so that they are roughly comparable with those of Isaacs *et al.* (1974) or with the tables in Appendix A of Novick and Jackson (1974). However, tables of values easily computed with a pocket calculator have been omitted. The tables have been computed using NAG routines and algorithms described in Patil (1965) and Jackson (1974).
