

CONTENTS

Introduction: The Infinite Improbability Drive	1
1. Energy	
Of heat, work and light	13
What Watt wrought	24
Thomas Edison and the invention business	26
The ubiquitous turbine	32
Nuclear power and the phenomenon of disinnovation	36
Shale gas surprise	41
The reign of fire	48
2. Public health	
Lady Mary's dangerous obsession	50
Pasteur's chickens	55
The chlorine gamble that paid off	57
How Pearl and Grace never put a foot wrong	61
Fleming's luck	64
The pursuit of polio	69
Mud huts and malaria	73
Tobacco and harm reduction	75
3. Transport	
The locomotive and its line	80
Turning the screw	87
Internal combustion's comeback	89

The tragedy and triumph of diesel	94
The Wright stuff	95
International rivalry and the jet engine	103
Innovation in safety and cost	107
4. Food	
The tasty tuber	112
How fertilizer fed the world	118
Dwarfing genes from Japan	129
Insect nemesis	136
Gene editing gets crisper	141
Land sparing versus land sharing	147
5. Low-technology innovation	
When numbers were new	149
The water trap	155
Crinkly tin conquers the Empire	159
The container that changed trade	162
Was wheeled baggage late?	170
Novelty at the table	173
The rise of the sharing economy	176
6. Communication and computing	
The first death of distance	178
The miracle of wireless	183
Who invented the computer?	189
The ever-shrinking transistor	196
The surprise of search engines and social media	204
Machines that learn	211
7. Prehistoric innovation	
The first farmers	216
The invention of the dog	222

The (Stone Age) great leap forward	227
The feast made possible by fire	234
The ultimate innovation: life itself	237

8. Innovation's essentials

Innovation is gradual	240
Innovation is different from invention	245
Innovation is often serendipitous	246
Innovation is recombinant	250
Innovation involves trial and error	253
Innovation is a team sport	255
Innovation is inexorable	257
Innovation's hype cycle	261
Innovation prefers fragmented governance	264
Innovation increasingly means using fewer resources rather than more	267

9. The economics of innovation

The puzzle of increasing returns	271
Innovation is a bottom-up phenomenon	275
Innovation is the mother of science as often as it is the daughter	282
Innovation cannot be forced upon unwilling consumers	286
Innovation increases interdependence	287
Innovation does not create unemployment	289
Big companies are bad at innovation	294
Setting innovation free	297

10. Fakes, frauds, fads and failures

Fake bomb detectors	300
Phantom games consoles	303
The Theranos debacle	304

Failure through diminishing returns to innovation:	
mobile phones	310
A future failure: Hyperloop	313
Failure as a necessary ingredient of success:	
Amazon and Google	317

11. Resistance to innovation

When novelty is subversive: the case of coffee	324
When innovation is demonized and delayed:	
the case of biotechnology	328
When scares ignore science: the case of weedkiller	335
When government prevents innovation:	
the case of mobile telephony	337
When the law stifles innovation:	
the case of intellectual property	342
When big firms stifle innovation:	
the case of bagless vacuum cleaners	350
When investors divert innovation:	
the case of permissionless bits	356

12. An innovation famine

How innovation works	359
A bright future	360
Not all innovation is speeding up	363
The innovation famine	365
China's innovation engine	368
Regaining momentum	371
Sources and further reading	375
Acknowledgements	389
Index	391
