Preface	page xiii
Acknowledgements	xviii
About the Authors	xx
<b>Part I Linear Algebra</b>	<b>1</b>
<b>1 Linear Algebra and Finite-Dimensional Vector Spaces</b>	<b>3</b>
1.1 Review of Matrices	4
1.2 Linear Independence and Linear Dependence	5
1.3 Spanning and Basis	12
1.4 Decomposing a Vector Space via Direct Sums	17
1.5 The Scalar Product	21
1.6 Orthogonality and the Gram–Schmidt Procedure	23
1.7 The Orthogonal Complement	30
1.8 Change of Basis and Orthogonal Matrices	38
Exercises	43
<b>2 Linear Transformations</b>	<b>52</b>
2.1 Linear Transformations	52
2.2 Change of Basis for Linear Transformations	59
2.3 Projection Tensors	67
2.4 Orthogonal Projection	73
2.5 Invariant Subspaces	79
2.5.1 The Null Space	79
2.5.2 The Range	80
2.5.3 One-Dimensional Invariant Subspaces – A First Look	85
Exercises	87
<b>3 Application to Systems of Equations</b>	<b>92</b>
3.1 Orthogonal Complements of the Range and Null Space	92
3.2 The Fredholm Alternative Theorem	97
3.3 The “Best Solution” When $\det \mathbf{A} = 0$	102
3.3.1 If the Solvability Condition Is Met	102
3.3.2 If the Solvability Condition Is Not Met	104

3.4	The Normal Equations	106
3.5	The Pseudo-Inverse	110
3.5.1	Connection to Least-Squares Data Fitting	113
3.5.2	Application: Fitting Stress–Stretch Data for Rubber	115
	Exercises	122
<b>4</b>	<b>The Spectrum of Eigenvalues</b>	<b>128</b>
4.1	Eigenvalues and Eigenvectors	129
4.2	Eigenspaces	134
4.2.1	Diagonalization	137
4.2.2	Application: Vibration of Spring and Mass Networks	140
4.3	Rectangular Matrices and Singular Values	146
4.4	The Fredholm Alternative Theorem – A Second Look	153
4.4.1	The FAT Generalized for $\mathbb{R}^n \mapsto \mathbb{R}^m$	154
4.4.2	Connection between the FAT and the Singular Values	156
4.5	The Singular Value Decomposition	162
4.6	The Pseudo-Inverse – A Second Look	170
4.6.1	Connection to the Singular Value Decomposition for “Highly Rectangular” Matrices	173
4.6.2	Application: Filtering Noise Out of a Linear System	177
	Further Reading in Linear Algebra	182
	Exercises	183
<b>Part II Complex Variables</b>		<b>189</b>
<b>5</b>	<b>Complex Variables: Basic Concepts</b>	<b>191</b>
5.1	Complex Numbers: Overview and Brief History	192
5.2	Complex Numbers and Operations	197
5.3	Planar Geometric Interpretation: The $z$ -Plane	202
5.4	Integration in the Complex Plane – a First Look	211
5.5	Non-Planar Geometric Interpretation: The Riemann Sphere	216
5.6	Point-Pair Algebra in Complex Analysis	223
	Exercises	230
<b>6</b>	<b>Analytic Functions of a Complex Variable</b>	<b>235</b>
6.1	Some Standard Complex Functions	236
6.2	Mapping with Complex Functions – a First Look	242
6.3	Analytic Functions	249
6.3.1	The Derivative	250
6.3.2	The Cauchy–Riemann Equations	253
6.4	Harmonic Functions	256

6.5	Application to Fluid Mechanics: Potential Flow	260
6.5.1	Two-Dimensional Steady Flows	265
6.5.2	Objects in the Flow Field	268
6.6	Mapping with Complex Functions – a Second Look: Schwarz–Christoffel Transformation	271
6.6.1	Mapping as Coordinate Transformation	271
6.6.2	The Open Mapping	275
6.6.3	The Closed Mapping	278
6.6.4	The Transformation	283
	Exercises	293
<b>7</b>	<b>The Cauchy Integral Theorems</b>	<b>302</b>
7.1	Integration of Analytic and Non-Analytic Functions	303
7.1.1	The Cauchy–Goursat Theorem	303
7.1.2	Consequences of the CGT for Evaluation of Integrals	305
7.2	Indefinite Integrals – the Antiderivative	311
7.3	The Cauchy Integral Theorem	317
7.4	Contour Integrals for the Derivatives of an Analytic Function	321
7.5	Harmonic Functions in the Unit Circle	324
7.6	Application: Inverting Laplace Transforms	326
7.7	Potential Flow Revisited: Forces Exerted by a Moving Fluid	334
	Exercises	351
<b>8</b>	<b>Series Expansions and Contour Integration</b>	<b>359</b>
8.1	Taylor Series	360
8.2	Laurent Series	364
8.3	Residues and the Residue Theorem	372
8.4	Contour Integrals Enclosing Various Pole Arrangements	378
8.5	Complex Contour Integrals That Permit the Evaluation of Real Integrals	385
8.6	Branching and Branch Cuts	392
8.6.1	Branched Maps	392
8.6.2	Integrals with Branching: Elliptic Integrals	400
8.6.3	Integrals with Branching: Polynomials, Logs, and Fractional Powers	403
8.6.4	Integrals with Branching: Inverse Laplace Transforms	407
8.7	Advanced Topics in Contour Integration	410
8.7.1	The Complex Fourier Transform	411
8.7.2	Singularities on the Integration Contour: The Plemelj Formulae	414
8.7.3	Analytic Continuation	420
	Further Reading in Complex Variables	427
	Exercises	429

<b>Part III</b>	<b>Partial Differential Equations</b>	<b>435</b>
<b>9</b>	<b>Linear Partial Differential Equations</b>	<b>437</b>
9.1	Equilibrium and Steady State	439
9.1.1	Separation of Variables, Eigenvalues, Eigenfunctions	444
9.1.2	Boundary-Value Problems with Parameters; Nontrivial Solutions	446
9.2	Partial Differential Equations for Time-Dependent Processes and the Role of Eigenvalues	447
9.3	Properties of Eigenfunctions and Eigenvalues for the Helmholtz Equation	456
9.3.1	The Rayleigh Quotient: Consequences for Eigenfunctions and Eigenvalues	456
9.3.2	Orthogonal Sets of Functions	459
9.3.3	Complete Sets of Orthogonal Functions	462
9.4	Approximating Eigenvalues Using the Rayleigh Quotient	464
9.5	Separation of Variables in Non-Cartesian Coordinates	471
9.6	A Steady-State Limit, Some Transient Decay, an Infinite Domain, and Even a Similarity Solution	480
	Exercises	488
<b>10</b>	<b>Linear Ordinary Differential Equations</b>	<b>495</b>
10.1	Review of Basic Facts about Linear ODEs	496
10.2	Differential Equations in the Complex Plane	501
10.2.1	Taylor-Expansion Solutions to Linear ODEs	502
10.2.2	Frobenius-Expansion Solutions to Linear ODEs	509
10.3	Special Functions	517
10.3.1	Bessel Functions	523
10.3.2	Legendre Polynomials	533
10.3.3	Special Functions That Do Not Typically Arise as Eigenfunctions – Briefly	543
10.4	The Sturm–Liouville Formulation for Second-Order ODEs	549
	Exercises	558
<b>11</b>	<b>Green’s Functions for Ordinary Differential Equations</b>	<b>566</b>
11.1	The Dirac Delta Function $\delta(x - x_0)$	567
11.1.1	Mathematical Underpinnings	567
11.1.2	The Delta Function as a Unit Impulse	573
11.2	Green’s Functions	578
11.3	The Adjoint of a Linear Differential Operator	587
11.3.1	Linear Algebra Background and Analogy	587
11.3.2	Formal Definition of the Adjoint; and an Example	589

11.4 The Fredholm Alternative Theorem for Differential Operators	592
Exercises	605
<b>12 Poisson's Equation and Green's Functions</b>	<b>610</b>
12.1 Diffusional Processes: The Poisson Equation	612
12.2 General Features of Laplace's Equation, Poisson's Equation, and Their Solutions	614
12.3 Green's Functions for Poisson's Equation	629
12.3.1 Free-Space Green's Function	632
12.3.2 Green's Function on Finite and Semi-infinite Domains	634
12.4 Problems on a Half-Plane	637
12.4.1 The Method of Image Sources and Sinks	638
12.4.2 Green's Functions Using Complex Analysis	644
12.5 Exploiting Symmetry and Superposition for a Dirichlet Problem on a Finite Domain	648
12.6 Green's Function in a Square: The Pull-Back and Push-Forward	654
Exercises	661
<b>13 Combined Green's Function and Eigenfunction Methods</b>	<b>666</b>
13.1 Vibration Theory and Normal Modes	667
13.2 Modified Green's Functions	673
13.2.1 Resonant Forcing with No Sympathetic Component	674
13.2.2 Application: Forced Harmonic Oscillation of a Taut String	677
13.3 Taking Advantage of the Sturm–Liouville Formulation	684
13.3.1 Completeness	685
13.3.2 Mathematical Connections to a Motivating (Parent) Physical Model	686
13.3.3 Green's Function for Sturm–Liouville Operators	688
13.4 The Sturm–Liouville Formulation and the Fredholm Alternatives	693
13.5 Complex-Contour Integration and Eigenfunction Expansions – a Deeper Connection	700
13.6 Application to PDEs – a Concluding Example	713
Further Reading in Partial Differential Equations – and Beyond	721
Exercises	724
References	729
Index	732
