# Detailed contents

## Introduction and orientation 1

0.1	Black-body radiation	1
0.2	Heat capacities	2
0.3	The photoelectric and Compton effects	3
0.4	Atomic spectra	4
0.5	The duality of matter	5

## 1 The foundations of quantum mechanics 9

### Operators in quantum mechanics 9

1.1	Linear operators	10
1.2	Eigenfunctions and eigenvalues	10
1.3	Representations	12
1.4	Commutation and non-commutation	13
1.5	The construction of operators	14
1.6	Integrals over operators	15
1.7	Dirac bracket and matrix notation	16
	(a) Dirac brackets	16
	(b) Matrix notation	17
1.8	Hermitian operators	17
	(a) The definition of hermiticity	18
	(b) The consequences of hermiticity	19

### The postulates of quantum mechanics 20

1.9	States and wavefunctions	20
1.10	The fundamental prescription	21
1.11	The outcome of measurements	22
1.12	The interpretation of the wavefunction	24
1.13	The equation for the wavefunction	24
1.14	The separation of the Schrödinger equation	25

### The specification and evolution of states 26

1.15	Simultaneous observables	27
1.16	The uncertainty principle	28
1.17	Consequences of the uncertainty principle	30
1.18	The uncertainty in energy and time	31
1.19	Time-evolution and conservation laws	31

### Mathematical background 1 Complex numbers 35

MB1.1	Definitions	35
MB1.2	Polar representation	35
MB1.3	Operations	36

## 2 Linear motion and the harmonic oscillator 37

### The characteristics of wavefunctions 37

2.1	Constraints on the wavefunction	37
-----	---------------------------------	----

2.2	Some general remarks on the Schrödinger equation	38
	(a) The curvature of the wavefunction	38
	(b) Qualitative solutions	39
	(c) The emergence of quantization	40
	(d) Penetration into non-classical regions	40

### Translational motion 41

2.3	Energy and momentum	41
2.4	The significance of the coefficients	42
2.5	The flux density	43
2.6	Wavepackets	44

### Penetration into and through barriers 44

2.7	An infinitely thick potential wall	45
2.8	A barrier of finite width	46
	(a) The case $E < V$	46
	(b) The case $E > V$	48
2.9	The Eckart potential barrier	48

### Particle in a box 49

2.10	The solutions	50
2.11	Features of the solutions	51
2.12	The two-dimensional square well	52
2.13	Degeneracy	53

### The harmonic oscillator 54

2.14	The solutions	55
2.15	Properties of the solutions	57
2.16	The classical limit	58

### Further information 60

2.1	The motion of wavepackets	60
2.2	The harmonic oscillator: solution by factorization	61
2.3	The harmonic oscillator: the standard solution	62
2.4	The virial theorem	62

### Mathematical background 2 Differential equations 66

MB2.1	The structure of differential equations	66
MB2.2	The solution of ordinary differential equations	66
MB2.3	The solution of partial differential equations	67

## 3 Rotational motion and the hydrogen atom 69

### Particle on a ring 69

3.1	The hamiltonian and the Schrödinger equation	69
3.2	The angular momentum	70
3.3	The shapes of the wavefunctions	71
3.4	The classical limit	72
3.5	The circular square well	73
	(a) The separation of variables	73
	(b) The radial solutions	73

<b>Particle on a sphere</b>	<b>75</b>	<b>Mathematical background 3</b> Vectors	<b>121</b>
3.6 The Schrödinger equation and its solution	75	MB3.1 Definitions	121
(a) The wavefunctions	77	MB3.2 Operations	121
(b) The allowed energies	78	MB3.3 The graphical representation of vector operations	122
3.7 The angular momentum of the particle	78	MB3.4 Vector differentiation	123
3.8 Properties of the solutions	80		
3.9 The rigid rotor	81		
3.10 Particle in a spherical well	83		
<b>Motion in a Coulombic field</b>	<b>84</b>	<b>5 Group theory</b>	<b>125</b>
3.11 The Schrödinger equation for hydrogenic atoms	84	<b>The symmetries of objects</b>	<b>125</b>
3.12 The separation of the relative coordinates	85	5.1 Symmetry operations and elements	126
3.13 The radial Schrödinger equation	86	5.2 The classification of molecules	127
(a) The solutions close to the nucleus for $l = 0$	86		
(b) The solutions close to the nucleus for $l \neq 0$	86	<b>The calculus of symmetry</b>	<b>131</b>
(c) The complete solutions	87	5.3 The definition of a group	131
(d) The allowed energies	89	5.4 Group multiplication tables	132
3.14 Probabilities and the radial distribution function	89	5.5 Matrix representations	133
3.15 Atomic orbitals	90	5.6 The properties of matrix representations	136
(a) s-orbitals	91	5.7 The characters of representations	138
(b) p-orbitals	91	5.8 Characters and classes	139
(c) d- and f-orbitals	93	5.9 Irreducible representations	140
(d) The radial extent of orbitals	93	5.10 The great and little orthogonality theorems	142
3.16 The degeneracy of hydrogenic atoms	94	<b>Reduced representations</b>	<b>146</b>
<b>Further information</b>	<b>95</b>	5.11 The reduction of representations	146
3.1 The angular wavefunctions	95	5.12 Symmetry-adapted bases	147
3.2 Reduced mass	95	(a) Projection operators	148
3.3 The radial wave equation	96	(b) The generation of symmetry-adapted bases	149
<b>4 Angular momentum</b>	<b>99</b>	<b>The symmetry properties of functions</b>	<b>151</b>
<b>The angular momentum operators</b>	<b>99</b>	5.13 The transformation of p-orbitals	151
4.1 The operators and their commutation relations	99	5.14 The decomposition of direct-product bases	152
(a) The angular momentum operators	100	5.15 Direct-product groups	154
(b) The commutation relations	100	5.16 Vanishing integrals	156
4.2 Angular momentum observables	101	5.17 Symmetry and degeneracy	158
4.3 The shift operators	102	<b>The full rotation group</b>	<b>159</b>
<b>The definition of the states</b>	<b>102</b>	5.18 The generators of rotations	159
4.4 The effect of the shift operators	103	5.19 The representation of the full rotation group	161
4.5 The eigenvalues of the angular momentum	104	5.20 Coupled angular momenta	162
4.6 The matrix elements of the angular momentum	106	<b>Applications</b>	<b>163</b>
4.7 The orbital angular momentum eigenfunctions	108	<b>Mathematical background 4</b> Matrices	<b>166</b>
4.8 Spin	110	MB4.1 Definitions	166
(a) The properties of spin	110	MB4.2 Matrix addition and multiplication	166
(b) The matrix elements of spin operators	111	MB4.3 Eigenvalue equations	167
<b>The angular momenta of composite systems</b>	<b>111</b>	<b>6 Techniques of approximation</b>	<b>170</b>
4.9 The specification of coupled states	111	<b>The semiclassical approximation</b>	<b>170</b>

(d) The resonance contribution to the scattering matrix element	496		
14.6 Methods of approximation	497		
(a) The WKB approximation	498		
(b) The Born approximation	499		
<b>Multichannel scattering</b>	<b>503</b>		
14.7 The scattering matrix for multichannel processes	504
