

Overview of contents

89	The packing of spheres to give solid structures	4.1
97	Ionic lattices	4.2
101	The radius ratio rule	4.3
107	Lattice enthalpy and the Born-Haber cycle – an experimental method for determining lattice enthalpy	4.4
	Theoretical method for lattice enthalpy	4.5
	Preface	vii

1 Atomic structure

1.1	Electromagnetic waves and matter	1
1.2	The photoelectric effect	4
1.3	Hydrogenic emission spectra and the Rydberg equation	6
1.4	Quantum numbers and atomic orbitals	10
1.5	Multi-electron atoms and the periodic table	15

2 Molecular orbitals and structure

2.1	Constructing molecular orbitals	19
2.2	Molecular orbital energy level diagrams: homonuclear diatomics – overlap of <i>s</i> atomic orbitals to form molecular orbitals	20
2.3	Molecular orbital energy level diagrams: homonuclear diatomics – overlap of <i>p</i> atomic orbitals to form molecular orbitals	23
2.4	<i>s-p</i> mixing resulting in σ - π crossover	25
2.5	Heteronuclear diatomics – σ bonding only	27
2.6	Heteronuclear diatomics – σ and π bonding	32
2.7	Triatomic molecules	33
2.8	Electron-deficient molecules: hydrogen bridges	35
2.9	Triatomic molecules showing σ and π bonding	37
2.10	Polyatomic molecules	40
2.11	Shapes of <i>p</i> -block covalent compounds	45

3 Periodicity and chemistry of the *s* and *p* blocks

3.1	Periodicity	58
3.2	Group 1	62
3.3	Group 2	66
3.4	Group 13	70
3.5	Group 14	72
3.6	Group 15	74
3.7	Group 16	77
3.8	Group 17	80
3.9	Group 18	84

You can find the series website at <http://www.oxfordtextbooks.co.uk/oxc/chemworkbooks>.

4 Solids

4.1	The packing of spheres to give solid structures	89
4.2	Ionic lattices	97
4.3	The radius ratio rule	104
4.4	Lattice enthalpy and the Born–Haber cycle—an experimental method for determining lattice enthalpy	107
4.5	Theoretical methods for calculating the lattice enthalpy	112

5 Coordination complexes of the *d*-block metals

5.1	Occurrence of the <i>d</i> -block elements and the shapes of <i>d</i> orbitals	119
5.2	Electronic configurations of the <i>d</i> -block metals and their ions	120
5.3	Determining oxidation states of <i>d</i> -block metal complexes and their electronic configurations	121
5.4	Geometry and coordination number in coordination complexes	122
5.5	Naming coordination complexes	125
5.6	Writing the formulae of coordination complexes	129
5.7	Isomerism in coordination complexes	130
5.8	Crystal-field theory	135
5.9	Colour in coordination complexes of <i>d</i> -block metals	144
	<i>Synoptic questions</i>	148
	<i>Answers</i>	151
	<i>Index</i>	157
