| Preface: A Brief Introduction to the Algae | xxv |
| About the Editors | xxvii |
| Contributors | xxxix |
| Author Index | xxxv |
| | |
| Part I Introductory Chapters | |
| 1 Recent Advances in the Photosynthesis of Cyanobacteria and Eukaryotic Algae | 3-9 |
| <i>Anthony W. D. Larkum, Arthur R. Grossman, and John A. Raven</i> | |
| I. Algal Systematics | 4 |
| II. Cyanobacteria | 4 |
| III. Crystal Structures | 4 |
| IV. Light Harvesting | 5 |
| V. Photoinhibition | 6 |
| VI. Dinoflagellates and Coral Bleaching | 6 |
| VII. Carbon Uptake and Metabolism (See Chap. 7 & 8) | 6 |
| VIII. Water-Water Cycles (See Chap. 8) | 7 |
| References | 8 |
| | |
| 2 The Algal Tree of Life from a Genomics Perspective | 11-24 |
| <i>Debashish Bhattacharya and Dana C. Price</i> | |
| I. Introduction | 11 |
| II. Why Inferring the Algal Tree of Life Is Non-trivial | 12 |
| III. Examples of Reticulate Behavior Among Algal Genes | 14 |
| IV. From Designer Datasets to Whole Genomes | 18 |
| V. Conclusions | 20 |
| References | 22 |

Part II Molecular Genetics of Algae

3 Chlorophyll-Xanthophyll Antenna Complexes: In Between Light Harvesting and Energy Dissipation

27-55

Christo Schiphorst and Roberto Bassi

| | | |
|-------|--|----|
| I. | Introduction | 27 |
| II. | Chromophores | 28 |
| III. | The Core Complexes of PSII and PSI | 31 |
| IV. | Light Harvesting | 32 |
| V. | Antenna Complexes of PSI | 37 |
| VI. | Fucoxanthin Chlorophyll Binding Proteins | 38 |
| VII. | Photoprotection | 40 |
| VIII. | Triggers of Quenching Reactions | 43 |
| IX. | Conclusions | 45 |
| | References | 45 |

4 The Dynamics of the Photosynthetic Apparatus in Algae

57-82

Jean-David Rochaix

| | | |
|------|--|----|
| I. | Introduction | 57 |
| II. | Adaptation to Changes in Light Conditions | 60 |
| III. | Response of the Photosynthetic Apparatus to Micronutrient Depletion | 69 |
| IV. | Long Term Response: Changes in Nuclear and Chloroplast Gene Expression | 71 |
| V. | Conclusions and Perspectives | 74 |
| | References | 75 |

5 Biosynthesis of Chlorophyll and Bilins in Algae

83-103

Robert D. Willows

| | | |
|-------|---|----|
| I. | Introduction | 83 |
| II. | Diversity of Chlorophylls in Algae | 84 |
| III. | Diversity of Bilins in Algae | 86 |
| IV. | Overview of Biosynthesis of Bilins and Chlorophylls | 88 |
| V. | Biosynthesis of Protoporphyrin IX | 89 |
| VI. | Biosynthesis of Bilins from Protoporphyrin and Function of Bilin Lyases | 92 |
| VII. | Biosynthesis of Chlorophylls from Protoporphyrin IX | 93 |
| VIII. | Synthesis of Chlorophyll <i>b</i> , <i>d</i> and <i>f</i> | 96 |
| IX. | Concluding Remarks | 97 |
| | Bibliography | 97 |

Part III Biochemistry and Physiology of Algae

- 6 Chloroplast Ion and Metabolite Transport in Algae** 107–139
Justine Marchand, Parisa Heydarizadeh, Benoît Schoefs, and Cornelia Spetea
- I. Introduction 107
 - II. Chloroplast Ion Transport 113
 - III. Chloroplast Metabolite Transport 119
 - IV. Strategies for Identification of Missing Algal Transporters 127
 - V. Conclusions and Perspectives 128
 - References 129
- 7 Structural and Biochemical Features of Carbon Acquisition in Algae** 141–160
John Beardall and John A. Raven
- I. Introduction 141
 - II. Carbon Assimilation 142
 - III. Occurrence of CCMs 145
 - IV. Mechanisms of CCMs Versus Diffusive CO₂ Fluxes 146
 - V. Structural Aspects of CO₂ Acquisition 151
 - References 153
- 8 Light-Driven Oxygen Consumption in the Water-Water Cycles and Photorespiration, and Light Stimulated Mitochondrial Respiration** 161–178
John A. Raven, John Beardall, and Antonietta Quigg
- I. Introduction 162
 - II. The Evidence of Light-Dependent O₂ Uptake 162
 - III. Possible Mechanisms of Light-Driven O₂ Uptake 163
 - IV. Functions of the Light-Driven O₂ Uptake Processes 169
 - V. Conclusions 171
 - References 171
- 9 The Algal Pyrenoid** 179–203
Moritz T. Meyer, Myriam M. M. Goudet, and Howard Griffiths
- I. Introduction 179
 - II. Pyrenoid Structure & Function: Lessons from *Chlamydomonas* 188
 - III. When, Where, How and Whither: From Paleo-Origins to Future Synthetic Biology 194
 - References 196

Part IV Light-Harvesting Systems in Algae

- 10 Light-Harvesting in Cyanobacteria and Eukaryotic Algae: An Overview** 207–260
Anthony W. D. Larkum
- I. Introduction 208
 - II. The Photosynthetic Pigments of Cyanobacteria and Eukaryotic Algae 210
 - III. *The Evolution of Protists with Plastids (Algae)* 222
 - IV. The Need for Light Harvesting Antennas 231
 - V. Light-Harvesting Antennas in Cyanobacteria and Eukaryotic Algae 232
 - VI. Control of Energy Supply to PSI and PSII: State Transitions, Absorption Cross-Sectional Changes and Spillover 233
 - VII. Non-photochemical Quenching 242
 - VIII. Reactive Oxygen Species (ROS) and Other Photoprotective Mechanisms 246
 - References 251
- 11 Light Harvesting by Long-Wavelength Chlorophyll Forms (Red Forms) in Algae: Focus on their Presence, Distribution and Function** 261–297
Stefano Santabarbara, Anna Paola Casazza, Erica Belgio, Radek Kaňa, and Ondřej Prášil
- I. Long Wavelength (“Red”) Chlorophyll a Forms: Historical Perspective on Their Discovery and General Overview 262
 - II. Long Wavelength Chlorophyll Forms Associated to Photosystem I 264
 - III. Long Wavelength Chlorophyll Forms Associated to Photosystem II 270
 - IV. Survey of Cyanobacterial and Algal Species for the Presence of Long-Wavelength Chlorophyll Forms 274
 - V. Effect of Long Wavelength Chlorophyll Forms on the Photochemical Quantum Efficiency 278
 - VI. Concluding Remarks 289
 - References 291
- 12 Diversity in Photoprotection and Energy Balancing in Terrestrial and Aquatic Phototrophs** 299–327
Atsuko Kanazawa, Peter Neofotis, Geoffry A. Davis, Nicholas Fisher, and David M. Kramer
- I. Introduction 299
 - II. Energy Storage and Regulation in Oxygenic Photosynthesis 300
 - III. The pmf Paradigm for Regulation of the Photosynthetic Light Reactions 302
 - IV. The Need to Coordinate q_E and Photosynthetic Control 303

| | | |
|-----------|--|----------------|
| V. | The Critical Need to Balance the Chloroplast Energy Budget | 303 |
| VI. | Regulation of CEF | 306 |
| VII. | Modulation of <i>pmf</i> Feedback Regulation and Its Impact on Energy Balancing | 307 |
| VIII. | How Diverse Photoprotective Mechanisms Challenge the <i>pmf</i> Paradigm and Open Up New Questions | 311 |
| IX. | Coping with ATP Excess or NADPH Deficit | 314 |
| X. | Conclusions and Perspective | 317 |
| | References | 318 |
| 13 | Photoinhibition of Photosystem II in Phytoplankton: Processes and Patterns | 329–365 |
| | <i>Douglas A. Campbell and João Serôdio</i> | |
| I. | Introduction: Scope & Terms | 329 |
| II. | Mechanisms of Photoinactivation | 330 |
| III. | Measurement and Parameterization of PSII Photoinactivation and Counteracting PSII Repair | 332 |
| IV. | Patterns of Photoinactivation and Repair Across Phytoplankton | 342 |
| V. | Summary | 357 |
| | References | 359 |
| 14 | Modulating Energy Transfer from Phycobilisomes to Photosystems: State Transitions and OCP-Related Non-Photochemical Quenching | 367–396 |
| | <i>Diana Kirilovsky</i> | |
| I. | Introduction | 367 |
| II. | The Phycobilisome | 368 |
| III. | The OCP-Related NPQ Mechanism | 370 |
| IV. | Cyanobacterial State Transitions | 381 |
| V. | Perspectives and Conclusions | 387 |
| | References | 388 |
| 15 | Coherent Processes in Photosynthetic Energy Transport and Transduction | 397–439 |
| | <i>Harry W. Rathbone, Paul M. G. Curmi, and Jeffrey A. Davis</i> | |
| I. | Introduction | 398 |
| II. | Quantum Behaviour, Coherence and Spectroscopy | 400 |
| III. | Diversity of Biological Light Harvesting | 408 |
| IV. | Deeper Exploration of Energy Transport in Biological Systems | 414 |
| V. | Summary and Conclusions | 432 |
| VI. | New Horizons | 434 |
| VII. | The Wrong Question: "Does Evolution Select for Non-trivial Quantum Effects?" | 435 |
| | References | 435 |

| | | |
|-----------|---|----------------|
| 16 | Light-Harvesting Complexes of Diatoms: Fucoxanthin-Chlorophyll Proteins | 441–457 |
| | <i>Claudia Büchel</i> | |
| | I. Introduction | 441 |
| | II. Genes Coding for FCP Polypeptides | 442 |
| | III. Supramolecular Organisation of FCP Complexes | 443 |
| | IV. Arrangement of Photosynthetic Complexes of Diatoms in the Thylakoid Membrane | 444 |
| | V. Pigmentation of FCPs and Excitation Energy Transfer | 446 |
| | VI. FCPs in Photoprotection | 448 |
| | VII. Regulation of FCP Expression | 450 |
| | VIII. Open Questions | 452 |
| | References | 452 |
| 17 | A Review: The Role of Reactive Oxygen Species in Mass Coral Bleaching | 459–488 |
| | <i>Milán Szabó, Anthony W. D. Larkum, and Imre Vass</i> | |
| | I. Introduction | 460 |
| | II. Review of the Experimental Evidence for Reactive Oxygen Species in Corals and <i>Symbiodinium</i> (Symbiodiniaceae) | 464 |
| | III. Molecular Physiology and Bioinformatics | 468 |
| | IV. The Detection and Role of Singlet Oxygen | 469 |
| | V. Symbiosis and Exocytosis in Corals | 471 |
| | VI. The Possible Mechanisms of Coral Bleaching | 473 |
| | VII. Bleaching in Anemones | 479 |
| | VIII. Conclusions | 480 |
| | References | 482 |
| | Correction to: Photosynthesis in Algae: Biochemical and Physiological Mechanisms | C1 |
| | Subject Index | 489–514 |
