Preface	xvii
CHAPTER 1 Nano-enabled technologies for wastewater remediation	1
JAIME PLAZAS-TUTTLE, FELIPE MUÑOZ GIRALDO AND ALBA AVILA	
1 Introduction	1
2 Nano-enabled water technologies.....	3
2.1 Nanocatalysts.....	3
2.2 Nanoadsorbents	5
2.3 Nano-enabled materials for separation	7
2.4 Nanomaterials for water disinfection.....	8
2.5 Detection of contaminants with nanomaterials	10
3 Challenges and future perspectives	11
References.....	14
CHAPTER 2 Common wastewater contaminants versus emerging ones: an overview	19
FRANCESCA S. FREYRIA, FILOMENA SANNINO AND BARBARA BONELLI	
1 Introduction.....	19
2 Role of nanomaterials in the detection and quantification of emerging contaminants	24
3 Role of nanomaterials in the removal of emerging contaminations.....	26
3.1 Conservative methods: membrane-based technologies	30
3.2 Conservative methods: adsorption	32
3.3 Nonconservative methods: advanced oxidation processes	34
3.4 Nanoscale zero valent iron for removal of emerging contaminants	38
4 Conclusion and future perspectives.....	39
References.....	40
CHAPTER 3 Detection methods of wastewater contaminants: state of the art and role of nanotechnology	47
LUIGI FALCIOLA, VALENTINA PIFFERI AND ANNA TESTOLIN	
1 Water pollution	47
2 Wastewater sources.....	48
3 Wastewater treatments	49
3.1 The importance of integrated systems	49
3.2 Water quality assessment	49
4 Conventional water contaminants and relevant detection methods.....	50

5	Emerging water contaminants and relevant detection methods	52
6	The Importance of nanomaterials and nanotechnology in chemical sensing.....	54
	6.1 Fluorescence imaging.....	55
	6.2 Use of quantum dots	55
	6.3 Biosensors.....	56
	6.4 Electronic transport	56
	6.5 Fluidics	57
	6.6 Electroanalysis.....	57
7	Applications of nanomaterials in chemical sensors.....	57
	7.1 Metallic nanoparticles	58
	7.2 Carbonaceous nanomaterials.....	58
	7.3 Polymeric and inorganic nanofibers.....	58
	7.4 Magnetic nanoparticles	58
	7.5 Semiconductor nanomaterials	58
	7.6 Silica nanoparticles	59
8	Advantages and disadvantages in the use of nanotechnology	59
	References.....	61
CHAPTER 4	Detection and removal of biological contaminants in water: the role of nanotechnology	69
	ALJO ANAND, URAWADEE RAJCHAKIT AND VIJAYALEKSHMI SAROJINI	
1	Introduction.....	70
2	Nanomaterials and composite membranes.....	73
	2.1 Metal nanoparticles	74
	2.2 Carbon-based nanoparticles	84
	2.3 Nanofilter	88
	2.4 Nanofibers.....	88
	2.5 Other nanotechnological methods.....	89
	2.6 Sensing, monitoring, and decontamination of biological contaminants	89
	2.7 Conclusions	98
	Acknowledgments.....	98
	References.....	98
CHAPTER 5	Nanomaterials for the efficient abatement of wastewater contaminants by means of reverse osmosis and nanofiltration	111
	SAMANEH BANDEHALI, FAHIME PARVIZIAN, ABDOLREZA MOGHADASSI AND SAYED MOHSEN HOSSEINI	
1	Introduction.....	111
2	Nano-enhanced membranes.....	113
	2.1 Metal-based nanoparticles.....	113
	2.2 Silica	116

2.3	Zeolites	119
2.4	Polyhedral oligomeric silsesquioxane materials.....	120
2.5	Carbon-based nanoparticles	121
2.6	Functionalization of nanoparticles	128
2.7	Metal organic frameworks	129
2.8	Organic polymer nanomaterials	132
3	Membrane preparation by nanofibers.....	133
4	Limitations	135
5	Conclusion	136
	References.....	137

CHAPTER 6 Advanced nanomaterials for ultrafiltration membranes application 145

MUHAMMAD MUQEET, TANVEER A. GADHI, RASOOL BUX MAHAR AND BARBARA BONELLI

1	Introduction.....	146
2	Properties of ultrafiltration membrane	148
	2.1 Mechanical strength	148
	2.2 Water permeability	148
	2.3 Thermal properties	148
	2.4 Membrane fouling	149
3	Classification of materials used in ultrafiltration membrane synthesis	149
4	Fabrication method of ultrafiltration membranes.....	150
5	Advanced materials embedding in ultrafiltration membranes	151
6	Embedded materials in ultrafiltration membranes and application evaluation	152
	6.1 Metal oxides	152
	6.2 Carbon-based materials	155
	6.3 Silica- and zeolite-based materials	156
7	Conclusion	157
	Acknowledgments.....	157
	References.....	157

CHAPTER 7 Adsorption processes for the removal of contaminants from wastewater: the perspective role of nanomaterials and nanotechnology..... 161

TAPAS RANJAN SAHOO AND BENEDICTE PRELOT

1	Introduction.....	162
2	Adsorption phenomena.....	165
	2.1 Adsorption processes.....	165
	2.2 Adsorption isotherms	170
	2.3 Classifications of the equilibrium isotherms.....	171

	2.4 Adsorption model isotherms	172
	2.5 Kinetics models	177
3	Various types of contaminants.....	179
	3.1 Organic contaminants.....	179
	3.2 Heavy metals	181
	3.3 Radioactive contaminants.....	182
	3.4 Drugs and other emerging contaminants	183
4	Various types of nanomaterials	184
	4.1 Metal oxide nanoparticles	184
	4.2 Metal nanoparticles	195
5	Conclusions and prospectives.....	205
	References.....	207
CHAPTER 8	Advanced nanomaterials for the removal of heavy metals from groundwater	223
	HENDRIK M NOLL AND JULIAN BOSCH	
1	Heavy metal pollution in the environment.....	223
	1.1 Heavy metals in groundwater	225
2	Groundwater remediation technologies—nanomaterials	225
	2.1 Particle injections	227
	2.2 Activated carbon.....	228
	2.3 Nanosized zero-valent iron	228
	2.4 Iron oxides	229
	2.5 Zeolite-based particles.....	229
3	Adsorption models.....	230
4	Framework for successful heavy metal remediation	232
	4.1 Contaminant distribution and concentration.....	233
	4.2 Speciation	233
	4.3 Structure and composition of the aquifer	234
5	Case studies of advanced heavy metal remediation projects	235
6	Perspectives.....	236
	References.....	236
CHAPTER 9	Metal—organic frameworks for water purification.....	241
	JORGE BEDIA, VIRGINIA MUELAS-RAMOS, MANUEL PEÑAS-GARZÓN, ALMUDENA GÓMEZ-AVILÉS, JUAN J. RODRIGUEZ AND CAROLINA BELVER	
1	Water contamination.....	241
	1.1 Type of contaminants	242
2	Metal—organic frameworks	244
	2.1 Synthesis of metal—organic frameworks	247
	2.2 Modifications	248

	2.3 Stability of metal–organic framework in aqueous phase	249
3	Water purification using metal–organic frameworks	250
	3.1 Adsorption	250
	3.2 Membranes	257
	3.3 Advanced oxidation processes	259
4	Conclusions	272
	Acknowledgments.....	272
	References.....	272
CHAPTER 10	Heterogeneous photocatalysis: how doping with nitrogen can improve the performance of semiconductor nanoparticles under visible light irradiation	285
	VINCENZO VAIANO, DIANA SANNINO AND OLGA SACCO	
1	Introduction to photocatalysts active under visible light.....	285
2	Different doping modes for TiO ₂	286
3	Nitrogen-doped TiO ₂	287
	3.1 Synthesis of nitrogen-doped TiO ₂	288
	3.2 Optimization of nitrogen-doped TiO ₂ using ammonia as nitrogen source	290
4	Applications of nitrogen-doped TiO ₂ in environmental remediation.....	292
	4.1 Nitrogen-doped TiO ₂ supported on glass spheres	292
	4.2 Nitrogen-doped TiO ₂ supported on phosphors	293
5	Conclusion and future perspectives.....	295
	References.....	295
CHAPTER 11	Heterogeneous photo-Fenton reaction and its enhancement upon addition of chelating agents	303
	WAEEL S. HAMD AND JOYDEEP DUTTA	
1	Introduction	304
2	Conventional Fenton process	305
	2.1 Homogenous Fenton process	305
	2.2 Homogenous photo-Fenton process.....	306
	2.3 Parameters influencing the degradation rate in homogeneous Fenton/photo-Fenton process.....	309
	2.4 Importance of chelating agents in homogeneous photo-Fenton processes	314
3	Heterogeneous Fenton/photo-Fenton process.....	315
	3.1 Interfacial mechanisms	315
	3.2 Parameters affecting the heterogeneous photo-Fenton processes.....	317
	3.3 Enhancement of photo-Fenton reactions by using chelating agents	319
4	Conclusions	323

	Acknowledgment	324
	References	324
CHAPTER 12	Actual mineralization versus partial degradation of wastewater contaminants.....	331
	TANVEER A. GADHI, RASOOL BUX MAHAR AND BARBARA BONELLI	
1	Introduction	331
2	Photocatalytic evaluation and analyses.....	333
3	Process different than mineralization	333
	3.1 Intense adsorption	333
	3.2 Photolysis and photosensitization.....	334
	3.3 Partial degradation and persistent intermediates.....	334
	3.4 Mineralization	335
4	Experimental discussion on different cases.....	335
	4.1 Organic dyes	335
	4.2 Phenolic compounds	343
	4.3 Nitrophenols.....	345
5	Conclusion.....	346
	Acknowledgments.....	346
	References.....	347
CHAPTER 13	A review of transport of nanoparticles in porous media: from pore- to macroscale using computational methods.....	351
	GIANLUCA BOCCARDO, TIZIANA TOSCO, ASAKO FUJISAKI, FRANCESCA MESSINA, AMIR RAOOF, DAVID R. AGUILERA, ELEONORA CREVACORE, DANIELE L. MARCHISIO AND RAJANDREA SETHI	
1	Introduction	352
2	Pore-scale modeling	353
	2.1 Pore space representation	353
	2.2 Flow field description	356
	2.3 Particle transport simulations at the pore scale.....	361
	2.4 Mechanisms of particle—porous medium interactions.....	365
	2.5 From pore- to macroscale: the single collector deposition efficiency.....	369
	Nomenclature	374
	Acknowledgments.....	377
	References	377
CHAPTER 14	Ecosafe nanomaterials for environmental remediation	383
	ILARIA CORSI, ANDREA FIORATI, GIACOMO GRASSI, ALBERTO RUBIN PEDRAZZO, FABRIZIO CALDERA, FRANCESCO TROTTA AND CARLO PUNTA	
1	Risks associated with the use of nanomaterials for environmental remediation and current limitations	383

2	Examples of ecotoxicity of engineered nanomaterials for environmental remediation	385
3	The role of ecotoxicology in developing ecologically safe materials	386
4	(Nano)remediation: from nanoscale to nanostructured materials	387
5	Biopolymers: a potential nanosolution within the circular economy strategy.....	388
5.1	Cellulose nanostructured sponges: synthesis, characterization, and remediation performances.....	388
5.2	Dextrin polymers and nanostructured sponges: synthesis, characterization, and remediation performances.....	392
6	Final remarks.....	397
	Acknowledgments.....	397
	References.....	397
CHAPTER 15	Matching nanotechnologies with reactor scale-up and industrial exploitation	407
	E. BAHADORI, G. RAMIS AND I. ROSSETTI	
1	Introduction	407
2	Packed-bed, slurry, or monolithic reactors	408
2.1	Packed-bed reactors	408
2.2	Monolithic reactors	410
2.3	Computation of diffusional limitations	411
2.4	Membrane reactors.....	418
2.5	Slurry reactors.....	418
2.6	Particle forming and separation.....	425
3	Common techniques for the immobilization of nanomaterials.....	427
3.1	Chemical vapor deposition	427
3.2	Metallorganic CVD and plasma CVD.....	427
3.3	Physical vapor deposition (PVD)	428
3.4	Atomic layer deposition.....	430
3.5	Jet vapor deposition (JVD).....	432
3.6	Electrochemical and electro-less deposition	432
3.7	Dip coating.....	433
3.8	Spray deposition.....	434
4	Conclusions	434
	Acknowledgments.....	434
	References.....	435
	Index	443
