Contents

Preface *v*

Part A: Chemical Ecology of Insects and Associated Plants and Microbes

1. Plant Secondary Metabolites in Host Selection of Butterfly 3
   Hisashi Ômura
2. Function of the Lepidopteran Larval Midgut in Plant Defense Mechanisms 28
   Naoko Yoshinaga and Naoki Mori
3. Chemically-mediated Interactions among Cucurbits, Insects and Microbes 55
   Lori R. Shapiro & Kerry E. Mauck
4. Chemoecology and Behavior of Parasitic Nematode—Host Interactions: Implications for Management 91
   Denis S. Willett, Xavier Martini, and Lukasz L. Stelinski
5. Microbial Endosymbionts and Chemical Ecology 114
   Daisuke Kageyama
6. Chemical Ecology of Yeasts Associated with Insects 131
   Jun Tabata and Hiroko Kitamoto

Part B: Applications of Insect Chemical Ecology to Agriculture, Environment Conservation, and Public Health

7. Application of Trail Pheromones to Management of Pest Ants 159
   Eiriki Sunamura

8. Female Sex Pheromones and Mating Behavior in Diurnal Moths: Implications for Conservation Biology 170
Hideshi Naka

9. Mating Disruption: Concepts and Keys for Effective Application 197
Jun Tabata

10. Applied Chemical Ecology to Enhance Insect Parasitoid Efficacy in the Biological Control of Crop Pests 234
Ezio Peri, Rihem Moujahed, Eric Wajnberg, and Stefano Colazza

11. Challenges in Chemical Ecology for the Management of Vector-borne Diseases of Humans and Livestock 268
Jun Tabata

Index 294
