Contributors	xv		
Preface	xix		
1. Cyanobacteria in Diverse Habitats			
<i>Lira A. Gaysina, Aniket Saraf, Prashant Singh</i>			
1. Introduction	1		
2. Cyanobacteria in Aquatic Habitats	2		
2.1 Marine Cyanobacteria	2		
2.2 Freshwater Cyanobacteria	5		
3. Symbiotic Cyanobacteria	7		
4. Terrestrial Cyanobacteria in Soil	9		
4.1 Arid Regions	9		
4.2 Temperate Climate	11		
5. Terrestrial Cyanobacteria in Environmental Stress Conditions	12		
5.1 Volcanic Ash	12		
5.2 Salted Soils	12		
5.3 Anthropogenically Disturbed Areas	13		
6. Polar Cyanobacteria	14		
6.1 Soils and Biological Soil Crusts	15		
6.2 Lithic Environments	16		
6.3 Snow and Glacial Ice	16		
6.4 Cryoconite Ecosystems	16		
6.5 Ponds, Lakes, Rivers, and Streams	17		
7. Conclusion	17		
Acknowledgments	18		
References	18		
Further Reading	28		
2. Cyanobacteria in Nitrogen-Fixing Symbioses			
<i>Edder D. Bustos-Díaz, Francisco Barona-Gómez, Angélica Cibrián-Jaramillo</i>			
1. Introduction	29		
2. Cyanobacterial Nitrogen Fixation, A Biological Conversion Based on Nitrogenases	30		
3. Cyanobacteria in Symbiosis, An Ancient and Evolving History of Interactions	31		
3.1 Obligate Cyanobacteria Symbionts	31		
3.2 Facultative Cyanobacteria Symbionts	37		
4. Trends in Cyanobacterial Nitrogen Fixation Symbioses			38
5. Conclusions			39
References			39
Further Reading			42
3. Cyanobacterial Taxonomy: Morphometry to Molecular Studies			
<i>N. Anand, N. Thajuddin, P.K. Dadheech</i>			
1. Introduction			43
2. Taxonomic Studies			44
3. Floristic Studies			44
3.1 Blue-Green Algal Flora of Rice Fields			44
3.2 Blue-Green Algae From Marine Environments			46
3.3 Blue-Green Algal Flora on the Rock Surface of Monuments and Temples			46
3.4 Thermal Cyanobacteria			46
4. Culture Studies, Numerical Taxonomy, and Life-Histories			47
5. Chemotaxonomy			48
5.1 Fatty Acid Composition and Taxonomy			48
6. Molecular Tools and Taxonomy			48
6.1 DNA Fingerprinting			48
6.2 Phylogenetic Analysis Using 16S rRNA and Others			51
6.3 Assessment of Morphological Characteristics by Molecular Analysis			51
6.4 Designation of New Genera and Identification			52
6.5 Polyphasic Analyses			53
6.6 Barcoding			54
7. Concluding Remarks			54
Appendix			54
Classification of Cyanobacteria as Cyanoprokaryotes			54
Acknowledgments			55
References			56
Further Reading			63

4. Dormant Cells (Akinetes) of Filamentous Cyanobacteria Demonstrate a Great Variability in Morphology, Physiology, and Ecological Function

Assaf Sukenik, Jacqueline Rücker, Iris Maldener

1. Introduction	65
2. What Triggers Akinete Formation in Nostocales?	65
3. Akinete Differentiation and Maturation	66
3.1 Morphology, Structure, and Cellular Composition	66
3.2 Metabolism During Akinete Differentiation, Maturation, and Dormancy	69
4. Genes Involved in Akinete Differentiation	69
5. Akinete Germination	70
6. Ecological Role of Akinetes	71
7. Conclusions and Open Questions	73
Acknowledgments	74
References	74

5. Chlorophyll *a* Fluorescence in Cyanobacteria: Relation to Photosynthesis

Alexandrina Stirbet, Dušan Lazár, George C. Papageorgiou, Govindjee

1. Introduction	79
1.1 Photosynthetic Apparatus and Oxygenic Photosynthesis in Cyanobacteria Compared to Plants and Algae	79
1.2 Photosynthetic Regulatory Processes in Cyanobacteria	81
1.3 The Importance of Chlorophyll <i>a</i> Fluorescence Measurements in the Study of the Photosynthetic Processes	82
2. Photosynthetic Systems and Antenna: Excitation Energy Transfer, Trapping, and Electron Transport	82
2.1 Phycobilisomes	82
2.2 Photosystem II	86
2.3 Photosystem I	91
3. Analysis of Chlorophyll <i>a</i> Fluorescence Induction in Cyanobacteria: Measurements With Continuous and Modulated Light	96
3.1 Chlorophyll <i>a</i> Fluorescence Induction and Measuring Techniques	96
3.2 The Maximum Quantum Yield of Photosystem II Photochemistry	99

3.3 The OJIP Transient Analysis	99
3.4 Chlorophyll <i>a</i> Fluorescence Induction Analysis Using the PAM-Saturation Pulse Method	100

4. Short-Term Regulatory Processes of Photosynthesis	102
4.1 State Transitions	102
4.2 Nonphotochemical Quenching of Chlorophyll <i>a</i> Fluorescence	108
5. Conclusions	110
Glossary	110
Acknowledgments	112
References	112
Further Reading	130

6. Photomorphogenesis in the Cyanobacterium *Fremyella diplosiphon* Improves Photosynthetic Efficiency

Vinod Kumar, Pankaj K. Maurya, Soumila Mondal, Rajeshwar P. Sinha, Shailendra P. Singh

1. Introduction	131
2. PBS and Its Composition	132
2.1 Tailoring of PBS to Maintain Cost and Energy Benefits	132
3. Molecular Understanding of CCA	133
3.1 Components of Rca Pathway	136
3.2 Rca Pathway	137
3.3 Cgi Pathway	137
4. Tailoring of Cell and Filament Morphology	138
4.1 Mechanistic Insight of Morphological Alteration During CCA	138
4.2 RcaE-Dependent Photoregulation of Morphology and ROS Levels	139
5. Conclusions	140
Acknowledgments	140
References	140

7. Mechanisms of Photoprotection in Cyanobacteria

Jainendra Pathak, Haseen Ahmed, Prashant R. Singh, Shailendra P. Singh, Donat-P. Häder, Rajeshwar P. Sinha

1. Introduction	145
2. Photodamage in Cyanobacteria	145
3. ROS Generated due to Photodamage in Cyanobacteria	147
3.1 Singlet Oxygen ($^1\text{O}_2$)	147
3.2 Superoxide Radicals (O_2^-)	147
3.3 Hydrogen Peroxide	147
3.4 Hydroxyl Radicals	148

4. ROS-Induced Lipid Peroxidation, Protein Oxidation, and DNA Damage in Cyanobacteria	148	9. Influence of Circadian Clocks on Optimal Regime of Central C-N Metabolism of Cyanobacteria	
4.1 Lipid Peroxidation	148	<i>Jan Cervený, Jakub Šalagovic, František Muzika, David Šafránek, Igor Schreiber</i>	
4.2 Protein Oxidation	148	1. Introduction	193
4.3 DNA Damage	149	2. Models of Cyanobacteria	194
5. Effect of UVR on Photosynthesis	149	2.1 Circadian Clock Model	194
6. Effect of UVR on Nitrogenase	149	2.2 Model of Carbon-Nitrogen Metabolism	195
7. Defense Mechanisms Adapted by Cyanobacteria Against High Light Intensity and UVR	150	2.3 Coupling of the Models	195
7.1 First Line of Defense Mechanism	150	2.4 Coupled Model Analysis	197
7.2 Second Line of Defense Mechanism	154	2.5 Stoichiometric Network Analysis	201
7.3 Third Line of Defense Mechanism	157	3. Concluding Remarks	204
7.4 Fourth Line of Defense Mechanism	159	Acknowledgments	204
8. Conclusion and Future Prospects	161	References	204
Acknowledgments	161	Further Reading	206
Conflict of Interest	162		
References	162		
Further Reading	169		
8. Nitrogenase and Hydrogenase: Enzymes for Nitrogen Fixation and Hydrogen Production in Cyanobacteria		10. Phycobiliproteins and Their Commercial Significance	
<i>Arun Kumar Mishra, Manish Singh Kaushik, D.N. Tiwari</i>		<i>Vinod K. Kannaujiya, Deepak Kumar, Jainendra Pathak, Rajeshwar P. Sinha</i>	
1. Introduction	173	1. Introduction	207
2. Heterocyst Differentiation and Nitrogen Fixation in Cyanobacteria	173	2. Commercial Production of PBPs	207
3. Nitrogen Assimilation and Control in Cyanobacteria	175	3. Purification	209
4. Nitrogenase: An Enzyme Linking N ₂ Fixation and H ₂ Production in Cyanobacteria	176	4. Utilization of PBPs	210
4.1 Nitrogenase-Dependent H ₂ Production in Heterocystous Cyanobacteria	178	4.1 Natural Dye and Nutraceuticals	210
5. Hydrogenases: Group of Enzymes Involved in Hydrogen Production and Regulation	179	4.2 Pharmaceutical Agents	210
5.1 Hydrogenases in Cyanobacteria	180	4.3 Fluorescent Agents	211
5.2 N ₂ Fixation and H ₂ Production in Nonheterocystous Cyanobacteria	183	4.4 Cosmetics	211
5.3 Strategies for Manipulating Cyanobacterial Machinery to Improve H ₂ Production	183	4.5 Clinical Significance	212
6. Photobioreactors Used for Cyanobacterial Hydrogen Production	184	5. Conclusions	213
7. Conclusion	185	Acknowledgment	213
Acknowledgment	186	References	213
References	186		
Further Reading	191		
		11. Environmental and Technological Stresses and Their Management in Cyanobacteria	
		<i>Liliana Cepoi</i>	
		1. Introduction	217
		2. The Influence of Heat Stress on Industrial Strain <i>Arthrospira platensis</i> CNMN-CB-11	218
		3. Influence of Light Stress on <i>Arthrospira platensis</i> CNMN-CB-11	224
		4. Influence of Salt Stress on <i>Arthrospira platensis</i> CNMN-CB-11 and <i>Nostoc linckia</i> CNMN-CB-03 in Laboratory Conditions	230

5. Influence of Copper and Zinc on <i>Arthrospira platensis</i> CNMN-CB-11 and <i>Nostoc linckia</i> CNM-CB-03	236	4. Conclusion	268
6. Final Remarks and Conclusions	241	References	271
References	242	Further Reading	276
12. Iron Homeostasis in Cyanobacteria		14. Ecophysiology of Cyanobacteria in the Polar Regions	
<i>Manish Singh Kaushik, Meenakshi Srivastava, Arun Kumar Mishra</i>		<i>Jana Kvíderová, Josef Elster, Jiří Komárek</i>	
1. Introduction	245	1. Introduction	277
2. Iron is Essential for Cyanobacterial Physiology and Survival	245	2. Habitats	278
3. Implication of Iron Deprivation in Cyanobacteria	246	3. Extreme Conditions and Stress Factors in the Polar Regions	278
4. The Putative Systems of Iron Acquisition in Cyanobacteria	247	4. General Mechanisms of Adaptation/ Acclimation	281
4.1 TonB-Dependent Transporters, TonB, and ExbB/ExbD System	247	4.1 Stress Avoidance	282
4.2 Fur Protein: An Iron Sensor and Global Regulator for Fine-Tuned Iron Homeostasis in Cyanobacteria	250	4.2 Stress Tolerance	284
5. Conclusion	256	5. Response to Crucial Stress Factors in the Polar Regions	284
Acknowledgment	256	5.1 General Mechanisms	284
References	256	5.2 Low Temperature	285
Further Reading	260	5.3 Freeze/Melting Cycles	286
		5.4 Desiccation	287
		5.5 Salinity	288
		5.6 Irradiance (PAR)	289
		5.7 Ultraviolet Radiation	291
		5.8 Multiple Stress	292
		6. Concluding Remarks	292
		Acknowledgments	293
		References	293
		Further Reading	302
13. Metals in Cyanobacteria: Physiological and Molecular Regulation		15. Pesticides and Rice Agriculture	
<i>Sanjesh Tiwari, Parul Parihar, Anuradha Patel, Rachana Singh, Sheo Mohan Prasad</i>		<i>Balkrishna Tiwari, Surbhi Kharwar, D.N. Tiwari</i>	
1. Introduction	261	1. Introduction	303
2. Impact of Heavy Metal on Physiological and Biochemical Processes	262	2. Pesticides and Cyanobacteria in Rice Agriculture	303
2.1 Impact of Heavy Metal Stress on Growth and Photosynthetic Pigments	262	3. Effect of Pesticide on Cyanobacterial Growth and Physiology	304
2.2 Impact of Heavy Metal Stress on Photosynthesis (Photosynthetic Activity and PS II Photochemistry) and Respiration	263	3.1 Effect of Insecticides on Cyanobacteria	305
2.3 Impact of Heavy Metal on Nitrogen Metabolism	264	3.2 Impact of Herbicides on Cyanobacteria	308
2.4 Impact of Heavy Metal on Oxidative Biomarkers and Antioxidants Status	265	4. Pesticide-Induced Oxidative Stress and Cyanobacterial Strategy of Tolerance	318
3. Mechanism of Stress Tolerance in Cyanobacterial System	265	5. Use of Cyanobacteria in Bioremediation of Pesticides	319
3.1 Exopolysaccharides—First Barrier for Protection at Cellular Level	266	5.1 Biodegradation of Insecticides by Cyanobacterium	319
3.2 Biosorption and Bioaccumulation	266	5.2 Biodegradation of Herbicides by Cyanobacteria	320
3.3 Regulation at Molecular Level	267		

6. Conclusions	320	18. Cyanobacterial Secretion Systems: Understanding Fundamental Mechanisms Toward Technological Applications	
Acknowledgments	321		
References	321	<i>Cátia F. Gonçalves, Steeve Lima, Paula Tamagnini, Paulo Oliveira</i>	
Further Reading	325		
16. Cyanobacteria: Applications in Biotechnology			
<i>Jay Kumar, Divya Singh, Madhu B. Tyagi, Ashok Kumar</i>			
1. Introduction	327	1. Introduction	359
2. Genetic Engineering for Strain Improvement	328	2. Transporter-Mediated Secretion	361
3. Bioactive Compounds	329	2.1 Protein Secretion	361
3.1 Pharmaceutical Compounds	329	2.2 Extracellular Polymeric Substances Secretion	363
3.2 Toxins	332	2.3 Soluble Sugars and Organic Acids Secretion	365
3.3 Photoprotective Compounds	332	2.4 Alcohols Export	367
3.4 Bioplastics	334	2.5 Fatty Acids Efflux	368
3.5 Dyes and Colorants	335	2.6 Terpenoids Secretion	369
4. Food, Feed, and Value-Added Products	335	3. Outer Membrane Vesicle-Mediated Secretion	370
5. Biofuel Production	336	3.1 OMVs: Composition, Biogenesis, and Functional Roles	370
6. Cyanobacteria as Source of Biofertilizer	337	3.2 OMVs as Biotechnological Tools	372
7. Role in Environmental Detoxification	339	4. Final Remarks	373
8. Conclusion	340	Acknowledgments	374
Acknowledgments	340	References	374
References	340	Further Reading	381
17. Cyanobacterial Exopolysaccharides: Composition, Biosynthesis, and Biotechnological Applications		19. Cyanobacterial Siderophores: Ecological and Biotechnological Significance	
<i>Savita Singh, Chandra Kant, Ravindra Kumar Yadav, Yattapu Prasad Reddy, Gerard Abraham</i>		<i>Sindhunath Chakraborty, Ekta Verma, Satya Shila Singh</i>	
1. Introduction	347	1. Introduction	383
2. Cyanobacterial Exopolysaccharides (EPSs)	348	2. Biogeochemistry of Iron in Aqueous Solution	384
3. Biosynthesis and Genes Involved in Exopolysaccharide Production	349	3. History of Siderophore Discovery	385
4. Extraction of Cyanobacterial Exopolysaccharides and Structural Analysis	350	4. Chemistry and Function of Siderophores	385
5. Biotechnological Applications of Exopolysaccharides	350	5. Types of Cyanobacterial Siderophores	387
5.1 Heavy Metal Removal and Wastewater Treatment	350	5.1 Hydroxamate	387
5.2 Role of Exopolysaccharides Under Different Types of Stresses	351	5.2 Catecholate	388
5.3 Food and Pharmaceutical Industry	352	6. Detection of Siderophores	388
5.4 Biofloculant	352	7. Biosynthesis of Siderophore	389
5.5 Soil Conditioning and Biofilm Formation	353	8. Factors Affecting Siderophore Production	390
6. Conclusion and Future Prospects	353	8.1 Iron Concentration	390
References	353	8.2 Types of Nitrogen Sources	390
		8.3 Effects of pH and Temperature	391
		9. Siderophore-Mediated Iron Acquisition	391
		10. Ecological Significance of Cyanobacterial Siderophores	392

11. Biomedical Significance of Siderophores	393	5.4 Citation Classics in Cyanobacterial Gaseous Biofuels Science and Technology	435
12. Conclusions	393	6. Conclusions	438
13. Future Prospects	393	Acknowledgments	439
Acknowledgments	393	Conflict of Interest	439
References	393	References	439
Further Reading	397	Further Reading	442
20. Ecotoxicological Assessment of Antibiotics in Freshwater Using Cyanobacteria		22. Cyanobacterial Toxins	
<i>Miguel González-Pleiter, Samuel Cirés, Jara Hurtado-Gallego, Francisco Leganés, Francisca Fernández-Piñas, David Velázquez</i>		<i>Joao Sarkis Yunes</i>	
1. Introduction	399	1. Important Historical Aspects	443
2. Effects of Antibiotics in Cyanobacteria	400	2. Mechanisms of Eutrophication and Their Effects on Toxic Cyanobacterial Bloom Formation	445
3. Effective Concentrations of Antibiotics in Cyanobacteria	401	2.1 Nonanthropogenic Contribution	445
4. Oxidative Stress	406	2.2 Anthropogenic Contribution	446
5. Intracellular Free Calcium <i>Anabaena</i> sp. PCC 7120 (pBG2001a)	408	2.3 The Effect of Eutrophication on Cyanobacterial and/or Algal Populations	447
6. Environmental Effects of Antibiotics on Cyanobacterial Biofilms: "Omic" Approaches	409	2.4 Cyanobacterial Bloom Formation: Interactive Causes and Consequences	448
7. Cyanobacterial Bioreporters Used in Antibiotics Studies	411	2.5 The Impact of Cyanotoxins on the Ecosystem Populations	449
8. Concluding Remarks	413	2.6 The Cyanotoxins	453
References	414	Acknowledgments	455
Further Reading	417	References	455
21. Cyanobacterial Bioenergy and Biofuels Science and Technology: A Scientometric Overview		Further Reading	458
<i>O. Konur*</i>		23. Plant Growth-Promoting Abilities in Cyanobacteria	
1. Introduction	419	<i>A.N. Rai, A.K. Singh, M.B. Syiem</i>	
2. Methods and Materials	419	1. Introduction	459
3. Scientometric Overview of the Research in Cyanobacterial Science and Technology	428	2. Promotion of Plant Growth Through Improvement of Soils	460
4. Scientometric Overview of the Citation Classics in Cyanobacterial Bioenergy and Biofuels Science and Technology	429	2.1 Reclamation of Usar Lands	460
5. Citation Classics in Cyanobacterial Bioenergy and Biofuels Science and Technology	431	2.2 Biofertilizers	460
5.1 Citation Classics in Cyanobacterial Bioenergy and Biofuels Science and Technology in General	431	3. Promotion of Plant-Growth Through Direct Transfer of Fixed Nitrogen	463
5.2 Citation Classics in Cyanobacterial Biomass Production	432	3.1 Cyanobacterial-Plant Symbioses	463
5.3 Citation Classics in Cyanobacterial Liquid Biofuels Science and Technology	433	3.2 Other Cyanobacterial-Plant Associations	466
		4. Promotion of Plant Growth Through Direct Transfer of Fixed Carbon	468
		5. Promotion of Plant Growth Through Production of Growth Hormones, Vitamins, and Other Substances	468
		6. Conclusion	470
		References	471
		Further Reading	476

24. Importance of Bioinformatics in Genome Mining of Cyanobacteria for Production of Bioactive Compounds

Shashank Kumar Maurya, Niveshika, Rajnikant Mishra

1. Introduction	477
2. Cyanobacteria as a Manufacturer of Bioactive Secondary Metabolites	477
3. Genome of Cyanobacteria	478
4. Genome Mining and Its Applications in Production of Bioactive Compounds of Cyanobacteria	479

4.1 Bioinformatics Portal for Secondary Metabolite	479
4.2 Mining of Genes and Proteins	503
5. Conclusions	505
Acknowledgment	505
Disclosure	505
References	505

Abbreviations	507
Index	515
