Contents

Part I: Basic Neurophysiology

1 Introduction 3

2 Excitable Cells and Action Potentials 7
2.1 Introduction 7
2.2 The Neuron 10
2.3 Generation of the Cell-Membrane Potential 12
2.4 Action Potential Generation 21
2.4.1 Hodgkin-Huxley Model of the Action Potential 23
2.5 Channelopathies 27
2.6 Electrolyte Abnormalities 28
2.7 Summary 29
Problems 30

References 32

3 Propagation of the Action Potential 33
3.1 Introduction 33
3.2 Passive Membrane Properties 34
3.2.1 Steady-State Solution of the Cable Equation 36
3.2.2 The Membrane Time Constant 38
3.2.3 Conduction Velocity 39
3.3 Active Membrane Properties 41
3.4 Myelinated Fibers 41
3.4.1 Estimation of λ and τ for Myelinated Fibers 43
3.4.2 Safety Factor 45
3.4.3 Action Potential Velocity 46

3.4.4 Saltatory Conduction 46
3.5 Peripheral Neuropathies 47
3.5.1 Axonal Polyneuropathies 48
3.5.2 Demyelinating Polyneuropathies 50
3.5.3 Diagnostics in Peripheral Neuropathies 50
3.6 Summary 50
Problems 51

References 51

4 Neural Circuits and Systems 53
4.1 The Synapse 54
4.1.1 Post-synaptic Potentials 55
4.1.2 Synaptic Strength 57
4.2 Firing Neurons 59
4.2.1 Integrate-and-Fire Model 60
4.3 Elementary Circuits 62
4.3.1 Motor Control 62
4.3.2 Language 67
4.3.3 Memory 68
4.4 Clinical Examples 69
4.4.1 Parkinson's Disease 69
4.4.2 Epilepsy 72
4.4.3 Dementia 77
4.4.4 Multiple Sclerosis 78
4.4.5 Stroke 80
4.4.6 Dysphasia 80
4.4.7 Agraphia 84
4.5 Summary 84
Problems 85

References 86

Part II: Clinical Neurophysiology

5 Basic Measurement Principles 91
5.1 Introduction 91
5.2 Man as Object for Measurement 92
5.3 Clinical Neurophysiology 93
5.4 General Aspects of the Measurement Process 95
5.4.1 Definition of a Transducer 95
5.4.2 Modulating and Self-generating Transducers 96
5.5 General Characteristics of Sensors 97
5.5.1 Systematic and Non-systematic Errors 97

5.5.2 Precision 98
5.5.3 Accuracy 98
5.5.4 Resolution 98
5.5.5 Sensitivity and Drift 99
5.5.6 Linearity 100
5.6 Dynamic Characteristics of Transducers 100
5.7 Converting Ionic to Electronic Currents: Interfaces 101
5.7.1 Polarizable Electrodes 101
5.7.2 Non-polarizable Electrodes 102
5.8 Electrical Analog of the Electrode-Skin Interface 107
5.9 Biopotential Electrodes 108
5.9.1 Noninvasive Electrodes 109
5.9.2 Minimal Invasive Electrodes 109
5.9.3 Invasive Electrodes 110
5.10 Summary 111
Problems 111

References 113

6 Stimulation of Nervous Tissue 115
6.1 Stimulation of Muscle or Nervous Tissue 115
6.1.1 Electric Fields in Volume Conductors 117
6.1.2 Thresholds for Excitation 121
6.1.3 Strength-Duration Curve 122
6.2 Neuromagnetic Stimulation 125
6.3 Evoked Potentials 126
6.3.1 Visual Evoked Potentials 126
6.3.2 Somatosensory Evoked Potentials 127
6.3.3 Brainstem Auditory Evoked Potentials 128
6.4 Deep Brain Stimulation 130
Problems 130

References 131

7 Electromyography 133
7.1 Review of Anatomy 133
7.1.1 Neuromuscular Junction 134
7.2 Diagnostic Work-Up 137
7.2.1 Estimation of the Peripheral Nerve Conduction Velocity 138
7.2.2 Needle Examination 140
7.2.3 Single Fiber EMG 142
7.3 Neuropathies 143
7.4 Myopathies 144

7.5 Summary of Electromyography 144
Problems 144

References 146

8 Electroencephalography 147
8.1 Introduction 147
8.2 Cellular Basis of EEG Activity 148
8.2.1 Non-synaptic Contributions to the EEG 151
8.2.2 Contribution of Non-pyramidal Cells to the EEG 151
8.3 Recording of the EEG 153
8.3.1 Recording Sites 154
8.4 Main Characteristics of the Human EEG 155
8.5 EEG in Epilepsy 157
8.6 EEG in Ischaemia 160
8.7 EEG in Sleep 161
8.8 EEG in Brain Death 162
8.9 Quantitative Analysis 162
8.10 Summary 163
Problems 163

References 164

9 Digital Signal Analysis 167
9.1 Introduction 167
9.2 Analog to Digital Conversion 168
9.3 Fourier Series and Fourier Transform 170
9.4 Fourier Analysis 172
9.4.1 Practical Issues in Spectral Estimates 178
9.5 Clinical Applications of Digital EEG Analysis 180
9.5.1 Intraoperative Brain Monitoring 180
9.5.2 Visual Transform of Routine EEG 181
9.6 Summary 183
Problems 183

References 184

Part III: Neurotechnology

10 Neurotechnology 187
10.1 Introduction 187
10.2 Neurostimulation 187
10.2.1 Spinal Cord Stimulation 188
10.2.2 Vagus Nerve Stimulation 189

10.2.3 Deep Brain Stimulation 191
10.3 Replacing Human Senses 192
10.4 Brain Computer Interfaces 194
10.5 Neural Replacement 195
Problems 196

References 197

Part IV: Clinical Decision Making

11 Rational Decision Making 201
11.1 Introduction 201
11.2 The "Monte Hall Three Door Problem" 201
11.3 Changing Probabilities 202
11.3.1 Quantifying a Test Outcome 204
11.3.2 Bayes 205
11.4 Summary 207
Problems 208

References 208

A Formula 209

B Symbols and Physical Constants 211

Solutions 213
