|-----------------|---|-----------|
| List of Figures | | xi |
| Introduction | | xiii |
| <hr/> | | |
| Part I | The Big Bang (and the synthesis of the elements in stars) | 1 |
| 1 | The Big Bang: science | 5 |
| 2 | The Big Bang: discovery | 12 |
| <hr/> | | |
| Part II | The Atom (hard spheres that attract and repel each other) | 31 |
| 3 | The Atom: science | 35 |
| 4 | The Atom: discovery | 52 |
| <hr/> | | |
| Part III | Energy and the Conservation Laws | 91 |
| 5 | Energy: science (and some history) | 95 |
| 6 | Motion prior to Galileo | 119 |
| 7 | Galileo and the Law of Fall | 124 |
| 8 | Newton and the Laws of Motion | 138 |
| 9 | The lever | 160 |
| 10 | The rise of mv^2 | 169 |
| 11 | Bernoulli and Euler unite Newton and Leibniz | 180 |
| 12 | Rudimentary version of the conservation of mechanical energy (1750) | 191 |
| 13 | Heat: the missing piece to the puzzle | 196 |
| 14 | Joseph Black and the rise of heat capacity | 202 |
| 15 | Lavoisier and the birth of modern chemistry | 209 |
| 16 | Rise of the steam engine | 217 |
| 17 | Caloric theory: beginning of its end | 224 |
| 18 | The ideal gas | 231 |
| 19 | The final steps to energy and its conservation | 237 |
| 20 | Julius Robert Mayer | 239 |
| 21 | James Joule | 249 |

| | | |
|----|-------------------------------------|-----|
| 22 | The 1st Law of Thermodynamics | 261 |
| 23 | Epilogue: The mystery of beta decay | 270 |

Part IV Entropy and the Laws of Thermodynamics 275

| | | |
|----|--|-----|
| 24 | Entropy: science (and some history) | 279 |
| 25 | It started with the piston | 293 |
| 26 | Britain and the steam engine | 299 |
| 27 | The Newcomen engine | 302 |
| 28 | James Watt | 309 |
| 29 | Trevithick, Woolf, and high-pressure steam | 316 |
| 30 | Sadi Carnot | 329 |
| 31 | Rudolf Clausius | 368 |
| 32 | William Thomson (Lord Kelvin) | 386 |
| 33 | The creation of thermodynamics | 422 |
| 34 | Clausius and the road to entropy | 438 |
| 35 | J. Willard Gibbs | 478 |
| 36 | Gibbs' third paper | 494 |
| 37 | Practical applications and Gibbs energy (G) | 514 |
| 38 | Dissemination of Gibbs' work | 521 |
| 39 | The 2nd Law, entropy, and the chemists | 528 |
| 40 | Clausius: the kinetic theory of gases | 543 |
| 41 | Maxwell: the rise of statistical mechanics | 552 |
| 42 | Boltzmann: the probabilistic interpretation of entropy | 570 |
| 43 | Shannon: entropy and information theory | 596 |
| | Afterword | 607 |
