

Content

Introduction	7
1 Implementing and developing computational thinking in education	12
1.1 Approaches to defining the concept of computational thinking	15
1.2 Sub-domains of computational thinking	17
1.3 Integrating computational thinking into world curricula	21
1.4 Developing computational thinking in applied teaching	25
1.5 Supporting materials for teaching to develop computational thinking	27
1.6 Testing computational thinking	29
1.7 Summary	30
2 The state of development of computational thinking at Czech schools	32
2.1 Characteristics of the performed analysis of the content of teaching of informatics at Czech schools	33
2.2 Thematic units taught at Czech schools	36
2.3 Representation of the thematic units in the teaching at Czech schools	39
2.4 Summary	41
3 Selected tools suitable for the development of computational thinking in the area of algorithmization and programming	42
3.1 SoloLearn	44
3.2 Codecademy and Codecademy GO	47
3.3 The Odin Project	52
3.4 freeCodeCamp	54
3.5 edX	57
3.6 Coursera	60
3.7 W3Schools	63
3.8 Mimo	67
3.9 Summary	70

4	Potential for development of computational thinking from the point of view of the 9th grade pupils at elementary schools	73
4.1	Focus and objectives of the performed research survey and formulation of research assumptions and hypotheses	74
4.1.1	Formulating research assumptions	75
4.1.2	Formulating research hypotheses	76
4.2	Description of the used data collection methods, description of the research sample and methods of processing the collected data	77
4.2.1	Structure and content of parts of the research questionnaire	78
4.2.2	Description of the research sample	78
4.2.3	Description of the methods of processing the collected data	79
4.3	Selected results of the research survey on the acceptance of teaching content of informatics subjects	80
4.3.1	Current level of knowledge in informatics subjects	81
4.3.2	Level of interest in individual informatics topics	88
4.3.3	Determining the current level of knowledge in the algorithmization and programming thematic unit	97
4.3.4	Determining the current level of interest in teaching the algorithmization and programming thematic unit	101
4.4	Summary and discussion of obtained results	105
5	Potential for development of computational thinking from the point of view of teachers at the 2nd stage of elementary school	108
5.1	Focus and objectives of the performed research survey and formulation of research assumptions and hypotheses	111
5.1.1	Formulating research assumptions	113
5.1.2	Formulating research hypotheses	114
5.2	Description of the used data collection methods, description of the research sample and methods of processing the collected data	118
5.2.1	Structure and content of parts of the research questionnaire	118
5.2.2	Description of the research sample	119
5.2.3	Description of the methods of processing the collected data	120
5.3	Selected results of the research survey on the acceptance of teaching content of informatics subjects	120
5.3.1	Current level of information among the 2 nd stage elementary school teachers on the forthcoming change in the FEP in the field of information and communication technologies	121
5.3.2	Opinions of the 2 nd stage elementary school teachers of informatics on the content of the forthcoming change in the FEP in the field of information and communication technologies	126
5.3.3	Preferences of the 2 nd stage elementary school teachers of informatics for the prospective introduction of algorithmization and programming thematic unit into teaching	134
5.3.4	The level of importance of individual informatics topics in the current FEP from the point of view of teachers	139

5.3.5	Opinions of the 2 nd stage elementary school teachers of informatics on the existing content of the FEP in the field of information and communication technologies	155
5.3.6	Determining the current level of teacher experience with teaching algorithmization and programming	161
5.3.7	Determining the current level of teachers' interest in their further education focused on algorithmization and programming issues	174
5.4	Summary and discussion of obtained results	185

6 Typology of groups of pupils and teachers of informatics subjects according to the thematic unit preferences **189**

6.1	Focus and objectives of the performed research survey and formulation of research assumptions	190
6.1.1	Formulating research assumptions	190
6.2	Description of the methods used for processing the collected data	191
6.2.1	Factor analysis	192
6.2.2	Cluster analysis	193
6.3	Typology of pupils based on their interest in learning informatics-related topics	194
6.4	Typology of teachers of informatics subjects in terms of the importance they attach to each thematic unit	200

Conclusion **206**

Literature and information sources used **212**

Annotation **217**
