Fundamentals of X-ray crystallography

1	Fundamentals of X-ray crystallography	1
1.1	Introduction	1
1.2	Crystallography compared with other structural techniques	1
1.3	The eye and microscope analogy	4
1.4	Fundamentals of the crystalline state	7
1.5	Diffraction of X-rays by molecules and crystals	13
1.6	The geometry and symmetry of X-ray diffraction	18
1.7	The intensities of diffracted X-rays	24
1.8	Sources of X-rays	29
1.9	Summary	31
1.10	Exercises	31
2	X-ray crystallography in practice	33
2.1	Introduction	33
2.2	The preparation and selection of samples	33
2.3	Measuring diffraction patterns	35
2.4	Obtaining unit cell geometry and symmetry	38
2.5	The measurement of intensities	39
2.6	Data reduction	41
2.7	Solving the structure	42
2.8	Completing the basic structure	52
2.9	Refining the structure	54
2.10	Disorder, twinning, and the determination of 'absolute structure'	57
2.11	Presenting and interpreting the results	62
2.12	Archiving and reporting crystal structures	64
2.13	Summary	67
2.14	Exercises	69
3	X-ray crystallography case studies	71
3.1	Introduction	71
3.2	Case study 1: a mercury thiolate complex	71
3.3	Case study 2: a solvated chiral rhodium complex	76
3.4	Case study 3: a microcrystalline chiral organic compound	80
3.5	Case study 4: a metal coordination chain polymer	84
3.6	Case study 5: a palladium complex of a bulky phosphine for catalysis studies	88

Most of the structures used as illustrations have been published and are recorded in the Cambridge Structural Database (CSD), databases are discussed in Chapter 2; in each case a literature reference is given, together with the CSD REFCODE, and computer results and data files are available online, so that the structures can be investigated further by readers and teachers.

3.7	Summary	90
3.8	Exercises	91
4	Related topics	93
4.1	Introduction	93
4.2	Single-crystal neutron diffraction	93
4.3	Diffraction by powder samples	96
4.4	Biological macromolecular crystallography	98
4.5	Crystal structure prediction	102
4.6	Summary	103
4.7	Exercises	104
	Glossary	107
	Further reading	112
	Index	113
	2 X-ray crystallography in practice	
2.1	Introduction	31
2.2	The preparation and selection of samples	33
2.3	Measuring diffraction patterns	35
2.4	Obtaining unit cell geometry and symmetry	38
2.5	The measurement of intensities	39
2.6	Data reduction	41
2.7	Solving the structure	43
2.8	Completing the basic structure	52
