### Anthrax

1. The Kameido anthrax incident: a microbial forensic case study

ARNOLD F. KAUFMANN AND PAUL KEIM

Introduction 3  
The Aum Shinrikyo: a brief history 3  
The Kameido anthrax incident 5  
Microbial forensic investigation 6  
Epidemiologic investigation 8  
Discussion 8  
Challenges 10  
References 10

2. The FBI's Amerithrax Task Force and the advent of microbial forensics

R. SCOTT DECKER AND TERRY L. KERNS

Concern for the future 11  
Laboratory Response Network 11  
Post-9/11: the second wave of attack 13  
Quality of spore material—behavioral assessment 15  
Amerithrax Task Force 16  
Colony morphology and DNA sequencing 16  
Carbon-14 dating 18  
Flexographic print defects 19  
Bacterial contamination 20  
Operational concerns—collection and preservation of microbial evidence 21  
References 22

3. Microbial forensic investigation of the anthrax letter attacks: how the investigation would differ using today's technologies

PAUL J. JACKSON

Methods used to analyze the attack isolate 25  
Analysis using today's advanced forensic methods 28  
Limits to sample analysis and other issues 29  
Conclusion 30  
References 31

### Applications of microbial forensics

4. Foodborne outbreaks

E.W. BROWN AND M.W. ALLARD

Whole genome sequencing for foodborne outbreaks 35  
'Omics and global scientific and regulatory trends 37  
Drivers for scientific development 37  
Regulatory framework and trends in standard setting 40  
Implications for developing and transitioning countries 42  
Key roles for international organizations 43  
Summary 45  
References 45  
Further reading 48

5. Forensic plant pathology

JACQUELINE FLETCHER, NEEL G. BARNABY, JAMES BURANS,  
ULRICH MELCHER, DOUGLAS G. LUSTER,  
FORREST W. NUTTER, JR., HARALD SCHERM,  
DAVID G. SCHMALE, III, CARLA S. THOMAS, AND  
FRANCISCO M. OCHOA CORONA

Introduction 50

Naturally caused versus intentional introduction	50
History of agricultural bioweapons	51
The need for forensic plant pathology	52
Pathogen detection and diagnostics	53
Epidemiology in forensic investigation	57
Mutation, evolution, and forensic plant pathology	59
Investigation	61
Roles and responsibilities	62
Education and outreach	63
Resources and infrastructure	64
Gaps	65
Summary	66
References	66

## 6. Microbial source tracking: characterization of human fecal pollution in environmental waters with HF183 quantitative real-time PCR

ORIN C. SHANKS AND ASJA KORAJKIC

The burden of human fecal pollution on public health and the economy	71
A human fecal source identification solution	72
Development of the human-associated HF183 qPCR method	74
Validation of the HF183 qPCR method	75
Implementation of nonfully validated HF183 qPCR method	80
Conclusions	82
References	83

## 7. Influenza forensics

ANGELA CHOI AND ADOLFO GARCÍA-SASTRE

Introduction	89
Influenza virus	90
Influenza A virus genome	90
Influenza nomenclature	91
Antigenic drift and shift	91
Brief history of influenza pandemics and epidemics	92
Outbreak detection	95
Protection against influenza	96
Influenza virus as a biological weapon?	98
Conclusions	102
References	102

## 8. Forensic public health: epidemiological and microbiological investigations for biosecurity

ALI S. KHAN, PHILIP S. AMARA, AND STEPHEN A. MORSE

Introduction	105
Dynamics of disease transmission	106
Outbreak investigation	108
Deliberate introduction of a biological agent	108
Molecular strain typing	113
Challenges	119
Summary	120
Acknowledgments	120
References	120

## 9. Forensic analysis in bacterial pathogens

PAUL KEIM, JASON W. SAHL, TALIMA PEARSON, AMY VOGLER, CHARLES H. WILLIAMSON, DAWN BIRDELL, RICHARD T. OKINAKA, JEFFREY T. FOSTER, AND DAVID M. WAGNER

Introduction	123
16S sequences and rapid ID of microbes	124
Forensic signatures: human versus bacterial pathogens	124
<i>Bacillus anthracis</i> : a model system	124
Mutation rates in bacteria	128
<i>Yersinia pestis</i> and plague: another recently emerged pathogen	128
<i>Francisella tularensis</i> and tularemia	130
<i>Brucella</i> spp. and brucellosis	131
<i>Burkholderia pseudomallei</i> and melioidosis	133
<i>Botulinum neurotoxin</i> -producing <i>clostridium</i> species	133
Conclusions	136
References	136

## 10. Genomic epidemiology and forensics of fungal pathogens

DAVID M. ENGELTHALER AND ANASTASIA P. LITVINTSEVA

Introduction	141
Pathogenic fungi	142
Conclusions	150
References	151

## 11. Forensic human identification using skin microbiome genetic signatures

SARAH E. SCHMEDES, AUGUST WOERNER, AND  
BRUCE BUDOWLE

- Introduction 155
- Human microbiome 157
- Human identity testing 158
- Human host attribution 159
- Methodologies 160
- Targeted multiplex panel of clade-specific markers 161
- Conclusions 164
- References 165
- Further reading 169

## 12. Using microbiome tools for estimating the postmortem interval

HEATHER DEEL, SIBYL BUCHELI, AERIEL BELK, SAM OGDEN,  
AARON LYNNE, DAVID O. CARTER, ROB KNIGHT, AND  
JESSICA L. METCALF

- Introduction 171
- Decomposition and estimation of the postmortem interval 172
- The microbial clock 177
- Knowledge gaps and areas of investigation 186
- Adoption of technology 186
- Conclusions 188
- References 189

# III

## Methodology

### 13. Select methods for microbial forensic nucleic acid analysis of trace and uncultivable specimens

RACHEL E. KIESER AND BRUCE BUDOWLE

- References 204

### 14. The use of host factors in microbial forensics

STEVEN E. SCHUTZER

- Introduction and background 207
- Illustrative concepts 210
- Utility of serologic analysis of people exposed to anthrax: strengths and limitations 213

Considerations and concerns raised by analysis of other infections 216

Possible scenarios of bioterrorism attacks: distinguishing victims from perpetrators 219

References 221

### 15. Toxin analysis using mass spectrometry

THOMAS A. BLAKE, SUZANNE R. KALB, RUDOLPH C. JOHNSON,  
AND JOHN R. BARR

- Introduction 225
- Specific toxin analysis methods 231
- Validation of toxin methods 233
- Current limitations to toxin analysis 236
- References 236

### 16. Ricin forensics: comparisons to microbial forensics

JEFFREY T. FOSTER, ROBERT L. BULL, AND PAUL KEIM

- Introduction 241
- Background 242
- Ricin toxin detection 244
- Castor bean genotyping 246
- Challenges 248
- References 249

### 17. Proteomics for bioforensics

ERIC D. MERKLEY, BROOKE L. DEATHERAGE KAISER,  
DAVID S. WUNSCHER, AND KAREN L. WAHL

- Introduction 251
- Why proteomics? 251
- Proteomic analysis workflow 253
- Applications of proteomic methods in microbial forensics 256
- Distinctive aspects of forensic proteomics 261
- Conclusions 263
- References 263

### 18. Bioinformatics

HECTOR F. ESPITIA-NAVARRO, LAVANYA RISHISHWAR,  
LEONARD W. MAYER, AND I. KING JORDAN

- Molecular epidemiology and typing 267
- Impact of NGS on bacterial typing schemes 270
- Genome-enabled bacterial typing schemes 276
- References 281

## 19. Genomics

TOM SLEZAK, JONATHAN ALLEN, AND CRYSTAL JAING

- Sequencing technologies 284
- Bioinformatics sequence analysis 287
- The pregenomic era 288
- Comparative genomics 289
- High-throughput screening assays 290
- Metagenomics 290
- Genome architecture and evolution 291
- Future challenges 292
- Genomics and microbial forensics 293
- Acknowledgments 294
- References 294

## 20. Design of genomic signatures for pathogen identification and characterization

TOM SLEZAK, BRADLEY HART, AND CRYSTAL JAING

- Genomic signatures 299
- Different types and resolutions of genomic signatures 300
- Potential target organisms 300
- Signature resolution 301
- Genomic sequence data: what to use and where to get it 301
- Identifying conserved sequence among targets 303
- Identifying sequences unique to targets 304
- Mining for signatures 304
- RNA viruses present additional challenges 305
- Signatures of potential bacterial genetic engineering 306
- Viral and bacterial detection array signatures 307
- The future of genomic signatures 308
- Protein signatures: a new forensic approach? 310
- Acknowledgments 310
- References 311

## 21. Collection and preservation of microbial forensic samples

JENIFER A.L. SMITH

- General best practices of collection of forensic evidence 314
- Collection strategies and methods for microbial forensic sampling 317
- Looking to the future 320
- References 321

## IV

## Legal aspects and interpretation of data

## 22. Assessment of the threat

JENIFER A.L. SMITH AND DAVID R. HODGE

- National threat assessment: role of the Intelligence Community 325
- Threat credibility assessments: role of law enforcement and public health officials 329
- Validation of biological agent detection assays 333
- Admission of scientific evidence 335
- Conclusion 336
- References 336

## 23. Scientific testimonial standards for microbial forensic evidence

STEPHAN P. VELSKO

- Introduction 339
- Considerations based on recent criticism of forensic science testimony 340
- Common practices in science communication may cause problems in testimony 342
- When can statistical language be justified? 345
- Some examples of certainty expression in microbial forensics 348
- Can more liberal standards for expressing uncertainty in scientific testimony be justified? 357
- References 358
- Further reading 360

## 24. Inferential validation and evidence interpretation

STEPHAN P. VELSKO

- Introduction 361
- Formalization of the idea of a "forensic test" 363
- More subtle issues with inferential validation 368
- Validation issues with "expanded" forensic microbiology applications 372
- Concluding remarks 377
- References 378
- Further reading 380

## 25. Microbial forensic investigations in the context of bacterial population genetics

PAUL KEIM, TALIMA PEARSON, BRUCE BUDOWLE, MARK WILSON, AND DAVID M. WAGNER

- Introduction and background 381
- A microbial forensic paradigm 384
- Calculating match probabilities 389
- Reference database 390
- Discussion 391
- References 392

## 26. Use of microbial forensics data in scientific, legal, and policy contexts

CHRISTOPHER A. BIDWELL AND RANDALL MURCH

- Introduction 393
- Microbial forensics in a policy context 394
- Microbial forensics in a legal context 398
- Conclusion 403
- References 403

## 27. Lessons for expert witnesses

STEPHEN A. SALTZBURG

- Introduction 405
- The legal standard 405
- An unusual process: lay judges rule on the reliability of expert work 407
- The ultimate error 410
- Expert exaggeration: a particular example of the ultimate error 411
- An example of careful science and the lessons it teaches 412
- Judicial skepticism 414
- Judicial findings of reliability 414
- State cases 415
- Expert credibility 415
- The importance of discovery 416
- Anticipating impeachment and attack 418
- Some tips for expert witnesses 418
- Cross-examination of government tanker expert 419
- Rule 706. Court-appointed expert witnesses 420
- Conclusion 421

# V

## Miscellaneous

### 28. Select agent regulations

STEPHEN A. MORSE AND BERNARD R. QUIGLEY

- Introduction 425
- The select agent regulations 425
- Summary 438
- References 438

### 29. Biorepositories and their foundation

FRANK P. SIMIONE, RICHARD R. VINES, AND TED D. MULLINS

- Managing microbial forensics biological resources 441
- Biological resource centers 442
- Creating value 444
- Sustainability 445
- Building a biological resource 446
- Long-term maintenance 447
- Assuring quality and standardization 447
- Data management and integration 449
- Acquisition 450
- Equitable access 451
- Safety and security 452
- Regulatory compliance 453
- Ideal microbial forensics biological resource 454
- References 455
- Further reading 455

### 30. The National Bioforensic Analysis Center

JAMES BURANS, JENNIFER S. GOODRICH,  
ROBERT L. BULL, AND NICHOLAS H. BERGMAN

- History of the NBFAC 457
- NBFAC operations 458
- NBFAC science 459
- NBFAC and the future of bioforensics 460
- Conclusion 461
- Standard acknowledgment 461
- References 461

### 31. An international microbial forensics research strategy and its collaborative pursuit is needed

RANDALL MURCH AND BRUCE BUDOWLE

- Introduction and background 463
- The strategic path to Zagreb 464
- Developing international microbial forensics research
  - Priorities, Zagreb 2013 467
- Additional perspectives 469
- An international research strategy matters to the United Nations office of disarmament affairs, the SGM, and beyond 471
- References 472

### 32. Education and training in microbial forensics

STEVEN B. LEE, DEETTA K. MILLS, STEPHEN A. MORSE, STEVEN E. SCHUTZER, BRUCE BUDOWLE, AND PAUL KEIM

- Microbial forensic curricula and training 475
- Basic epidemiology 484

- Molecular epidemiology 485
- Microbes and their products as biological weapons 485
- Host factors including immune responses 485
- Processes and technology 486
- Forensic science 490
- Case histories 491
- Legal issues 491
- Operational and intelligence issues 492
- National-level capabilities and resources 492
- Conclusion 492
- References 493

### 33. Microbial forensics: what next?

STEPHEN A. MORSE, BRUCE BUDOWLE, AND STEVEN E. SCHUTZER

- References 500

Index 501
