Foreword	9
1. Data	11
1.1. Space and time	14
1.2. Significant health and environmental risks over time	16
1.3. Motivation and terminology	21
– The history of the disease	22
– Monitoring and Screening	23
– Sensitivity and Specificity	24
– Incidence and Prevalence	26
– Diagnostic test and Screening test	28
– Outbreak	29
– Environmental monitoring	30
1.4. Non-invasive data collection and accurate data processing	30
Benefits from a combination of individual techniques	31
Benefit of preparatory simulations	32
1.5. Three selected key themes	33
1.5.1. Reduction of risks at data collection, processing and storage	33
1.5.2. Digitization of acquired image	34
1.5.3. Introduction/implementation of artificial intelligence algorithms	37
– Data categorization	37
– SWOT analysis of work with data in medicine	38
– Healthcare and data processing in the past	39
– Healthcare and data processing today	39
– The vision of health care for the future	40
– Methods of artificial intelligence in environmental medicine ..	42
– Artificial Intelligence Applications in Healthcare	44
– Applications in environmental monitoring	45
1.6. Data Processing Example	46
2. Exposure to air pollution	49
2.1. Respiratory system as biomarker	52
Impact of polluted environment	52
Evaluation of our findings	54
Selected findings in electron microscopic image	55

2.2. Placenta and umbilical cord blood as biomarker	59
2.2.1. Finding the connection between the presence of Lead and ADHD	61
Reminder of the monitored mechanisms	62
ADHD and the environment	63
2.2.2. Motivation of our Research	65
2.2.3. Examination methods used in identified biomarkers of interest	68
2.2.4. Achieved results	72
Proposals for application in clinical practice	73
2.3. Lead and deposits	75
Lead deposits in the teeth	76
2.4. Monitoring of health and the environment	80
– Gas Chromatography	80
– PTRMS	80
– Few notes related to diagnostic techniques	81
– Few notes related to environmental risks	81
3. Exposition to ionizing radiation	87
Abstract to chapter – Effect of radiation	88
3.1. The nature of radiation	88
Geometry of the situation	89
Physics – origin of radiation	89
Important parameters affecting radiation exposure	90
3.2. Radiation interaction with organism	92
Direct and indirect ionization	92
Role of radioprotective substances	93
Mathematical view of the consequences of radiation	94
There are two questions to ask	94
3.3. Selected medical techniques using radiation	96
3.4. Health risks associated with the radiation	98
3.4.1. Effects of radiation on the Lungs	99
The role of fibroblast	101
Selected findings in microscopic image	102
– Lung after irradiation	103
– Esophagus	105
Literature	108
Register	112
