About the Author	15
Preface	23
I Introductory Chapters	27
1 Differential Calculus	29
1.1 The Limit	30
1.1.1 L'Hopital's Rule	36
1.1.2 More Advanced Limits	39
1.2 The Derivative	45
1.2.1 Product Rule	46
1.2.2 Quotient Rule	48
1.2.3 Chain Rule	49
1.3 Exercise Problems	56

2	Basic Integration	59
2.1	Riemann Integral	60
2.2	Lebesgue Integral	63
2.3	The u -substitution	65
2.4	Other Problems	81
2.5	Exercise Problems	98
3	Feynman's Trick	101
3.1	Introduction	102
3.2	Direct Approach	103
3.3	Indirect Approach	128
3.4	Exercise Problems	131
4	Sums of Simple Series	135
4.1	Introduction	136
4.2	Arithmetic and Geometric Series	136
4.3	Arithmetic-Geometric Series	141
4.4	Summation by Parts	146
4.5	Telescoping Series	152
4.6	Trigonometric Series	159
4.7	Exercise Problems	163

II Series and Calculus	165
5 Prerequisites	167
5.1 Introduction	168
5.2 Ways to Prove Convergence	173
5.2.1 The Comparison Test	173
5.2.2 The Ratio Test	173
5.2.3 The Integral Test	177
5.2.4 The Root Test	181
5.2.5 Dirichlet's Test	184
5.3 Interchanging Summation and Integration	185
6 Evaluating Series	191
6.1 Introduction	192
6.2 Some Problems	193
6.2.1 Harmonic Numbers	204
6.3 Exercise Problems	213
7 Series and Integrals	215
7.1 Introduction	216
7.2 Some Problems	216
7.3 Exercise Problems	230

8	Fractional Part Integrals	233
8.1	Introduction	234
8.2	Some Problems	235
8.3	Open Problems	255
8.4	Exercise Problems	255
III	A Study in the Special Functions	257
9	Gamma Function	261
9.1	Definition	262
9.2	Special Values	262
9.3	Properties and Representations	263
9.4	Some Problems	270
9.5	Exercise Problems	275
10	Polygamma Functions	277
10.1	Definition	278
10.2	Special Values	279
10.3	Properties and Representations	280
10.4	Some Problems	282
10.5	Exercise Problems	294

11 Beta Function 297

11.1 Definition 298

11.2 Special Values 299

11.3 Properties and Representations 299

11.4 Some Problems 304

11.5 Exercise Problems 311

12 Zeta Function 313

12.1 Definition 314

12.2 Special Values 314

12.3 Properties and Representations 319

12.4 Some Problems 328

12.5 Exercise Problems 337

IV Applications in the Mathematical Sciences and Beyond 341**13 The Big Picture 343**

13.1 Introduction 344

13.2 Goal of the Part 345

14 Classical Mechanics 347

14.1 Introduction 348

14.1.1	The Lagrange Equations	348
14.2	The Falling Chain	349
14.3	The Pendulum	355
14.4	Point Mass in a Force Field	359
15	Physical Chemistry	365
15.1	Introduction	366
15.2	Sodium Chloride's Madelung Constant	372
15.3	The Riemann Series Theorem in Action	374
15.4	Pharmaceutical Connections	379
15.5	The Debye Model	380
16	Statistical Mechanics	385
16.1	Introduction	386
16.2	Equations of State	387
16.3	Virial Expansion	389
16.3.1	Lennard-Jones Potential	390
16.4	Blackbody Radiation	392
16.5	Fermi-Dirac (F-D) Statistics	397
17	Miscellaneous	405
17.1	Volume of a Hypersphere of Dimension N	406

17.1.1 Spherical Coordinates	406
17.1.2 Calculation	408
17.1.3 Discussion	411
17.1.4 Applications	413
17.1.5 Mathematical Connections	414

V Appendices	417
---------------------	------------

Appendix A	419
-------------------	------------

Appendix B	425
-------------------	------------

Acknowledgements	429
-------------------------	------------

Answers	431
----------------	------------

Integral Table	439
-----------------------	------------

Trigonometric Identities	443
---------------------------------	------------

Alphabetical Index	447
---------------------------	------------
