

CONTENTS

PART ONE: BASIC CONCEPTS

1. Elements of Medical Cytogenetics 3
2. Chromosome Analysis 20
3. The Origins and Consequences of Chromosome Pathology 26
4. Deriving and Using a Risk Figure 59

PART TWO: PARENT OR CHILD WITH A CHROMOSOMAL ABNORMALITY

5. Autosomal Reciprocal Translocations 69
6. Sex Chromosome Translocations 113
7. Robertsonian Translocations 142
8. Insertions 158

9. Inversions 177
10. Complex Chromosomal Rearrangements 201
11. Autosomal Ring Chromosomes 210
12. Centromere Fissions, Complementary Isochromosomes, Telomeric Fusions, Balancing Supernumerary Chromosomes, Neocentromeres, Jumping Translocations, and Chromothripsis 222
13. Down Syndrome, Other Full Aneuploidies, Polyploidy, and the Influence of Parental Age 229
14. Autosomal Structural Rearrangements: Deletions and Duplications 256
15. Sex Chromosome Aneuploidy and Structural Rearrangement 337

16. Chromosome Instability
Syndromes 359

PART THREE: CHROMOSOME VARIANTS

17. Normal Chromosomal Variation 369

PART FOUR: DISORDERS ASSOCIATED
WITH ABERRANT GENOMIC IMPRINTING

18. Uniparental Disomy and Disorders
of Imprinting 387

PART FIVE: REPRODUCTIVE CYTOGENETICS

19. Reproductive Failure 421

20. Prenatal Testing Procedures 447

21. Chromosome Abnormalities Detected
at Prenatal Diagnosis 466

22. Preimplantation Genetic
Diagnosis 516

PART SIX: DISORDERS OF SEX
DEVELOPMENT

23. Chromosomal Disorders
of Sex Development 535

PART SEVEN: NOXIOUS AGENTS

24. Gonadal Cytogenetic Damage from
Exposure to Extrinsic Agents 547

APPENDIXES

A. Ideograms of Human Chromosomes,
and Haploid Autosomal Lengths 557

B. Cytogenetic Abbreviations
and Nomenclature 563

C. Determining 95 Percent
Confidence Limits, and
the Standard Error 569
