<i>Preface by Rob Butler</i>	vii
<i>Foreword</i>	xi
<b>1 Geology, a story of layers</b>	<b>1</b>
1.1 <i>The globe and the various layers that make it up</i>	1
1.2 <i>Strike and dip of a layer</i>	2
1.3 <i>Geometric relationships between dip and topography using the three points method</i>	4
1.4 <i>3D models of layers intersecting a topography</i>	6
<i>Information box: valley morphology</i>	9
<b>2 When strata cross and overlie each other: the concept of unconformity</b>	<b>13</b>
2.1 <i>Definition and historical importance of the concept of unconformity</i>	13
<i>Information box: geological time and philosophy</i>	14
2.2 <i>Overview of unconformities, the concept of basement and cover, great regional unconformities</i>	15
2.3 <i>Great ocean unconformities, the concept of a “break-up unconformity”</i>	21
2.4 <i>Dating an unconformity</i>	22
2.5 <i>Dating the duration of an event</i>	27
2.6 <i>Unconformity model for 3D printing</i>	27
<b>3 When strata fracture: faults</b>	<b>33</b>
3.1 <i>Fracture theory (Mohr’s circle and envelope)</i>	33
<i>Information box: triaxial stress condition</i>	36
<i>Information box: when rocks fracture in other ways</i>	40
3.2 <i>The main categories of faults</i>	43
3.3 <i>The consequences of movement on faults</i>	47
3.4 <i>Elemental structures resulting from combinations of faults</i>	50
3.5 <i>Printable 3D models of faults and associations of faults</i>	52

<b>4</b>	<b>When strata fold without breaking too much: detachment folds</b>	<b>55</b>
4.1	<i>Theory of folding</i>	55
4.2	<i>Some basic concepts relating to folds</i>	56
	<i>Information box: relationships between folds and cleavage</i>	59
4.3	<i>Horizontal shortening, excess surface area and detachment depth: toward the kinematics of detachment folds</i>	62
4.4	<i>3D models of detachment folds</i>	68
4.5	<i>The role of the basement: "thin-skinned" tectonics and "thick-skinned" tectonics</i>	71
<b>5</b>	<b>When folds and faults interact: fault-related folds and fold-and-thrust belts</b>	<b>75</b>
5.1	<i>The concept of fault-bend folding</i>	75
5.2	<i>Kinematics of fault-bend folding</i>	80
5.3	<i>Fault-propagation folding: geometry and kinematics</i>	82
5.4	<i>Variations and limits of kinematic models of fault-bend folds</i>	84
5.5	<i>3D models of fault-bend folds</i>	88
	<i>Information box: folding of strata and analog models</i>	91
5.6	<i>Interaction of individual structures in fold-and-thrust belts</i>	94
<b>6</b>	<b>When the salt plays the major role: the effects of salt activity and the concept of salt tectonics</b>	<b>101</b>
6.1	<i>Deposition of salt and geodynamics</i>	101
6.2	<i>Definition of the different types of salt-related structures</i>	101
6.3	<i>Causes of salt mobility</i>	105
6.4	<i>Printable 3D models of salt-related structures</i>	111
	<i>Appendix</i>	113
	<i>Practical tips for designing and printing 3D objects</i>	113
	<i>Toward 3D models representing real examples</i>	116
	<i>Other applications in the field of earth sciences</i>	117
	<i>Glossary</i>	121
	<i>Stratigraphic chart</i>	127
	<i>Bibliography</i>	131
	<i>Index</i>	135
