and forests

12 Changing climates

14 Saving our planet

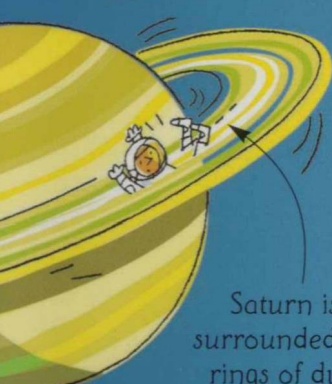

A pair of binoculars under a flap means we've zoomed in for a closer look.

Neptune

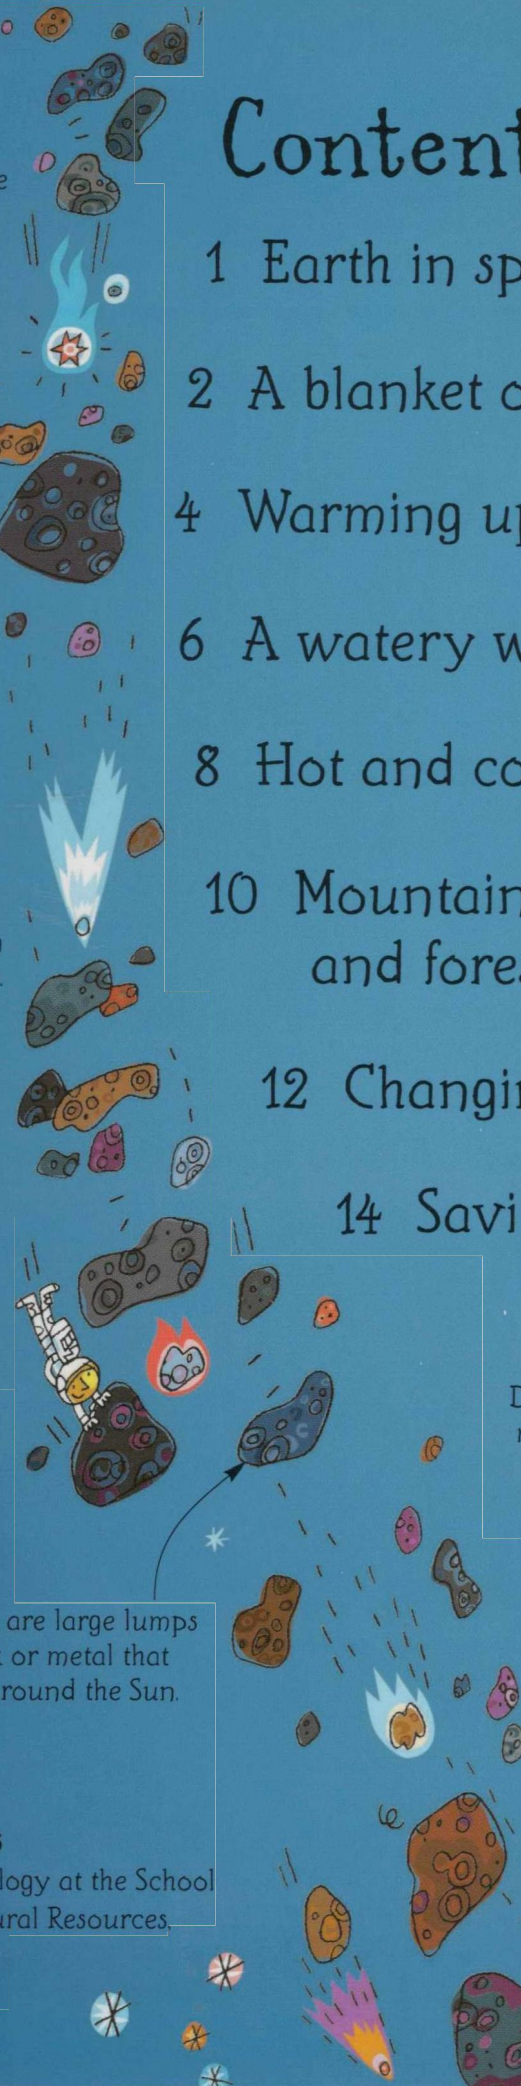

Uranus

Saturn is surrounded by rings of dust and rock.

Jupiter is the largest planet in the solar system.

3139800691

Asteroids are large lumps of rock or metal that whizz around the Sun.

Distances in space are so vast, they are measured in light years. A light year is the distance light travels in a year – 9.5 trillion km or 6 trillion miles.

There is evidence of water on Mars, which may mean there's life there too.

Mars
