CONTENTS

Preface 11

PART I (*Assoc. Prof. M. Kužvart, CSc.*) 19

Introduction 19

Literature on prospecting and exploration 24

Industrial types of mineral deposits 26

Prospecting of mineral deposits 57

Criteria for ore prospecting 57

1. Stratigraphical criteria 57
2. Lithological criteria 60
3. Structural criteria 64
4. Magmatogenic criteria 87
   a) The relationship between ore deposits and magma chemistry 87
   b) The relationship between ore deposits and magma differentiation 91
   c) Rock alterations in the neighbourhood of deposits as prospecting guides 91
   d) The relationship between ore deposits and the grain size of rocks 98
   e) The relationship between ore deposits and the size of intrusions 99
   f) The relationship between deposits and the internal structure of intrusions 101
   g) Relationship between deposits and the depth of magma cooling 101
5. Metamorphogenic criteria 101
6. Geochemical criteria 102
7. Geomorphological criteria 102
8. Palaeogeographical criteria 106
9. Palaeoclimatic criteria 111
10. Historical criteria 112

Natural factors controlling the choice of prospecting methods 112

Prospecting methods and indications 113

Mining-historical methods and indications 113

Geological ground prospecting methods 122

Prospecting for deposit outcrops 122

Prospecting for the mechanical aureoles (haloes) of ore fragments 130

Prospecting based on erratic ore boulders 131

Prospecting based on heavy mineral concentrates 133

Prospecting based on ore pebbles 140

Use of aerial photography and satellite imagery in prospecting 142

Geochemical prospecting methods and indications 143

Prospecting for concealed deposits 155

Prospecting for ore deposits in various geographical areas 162

Prospecting in little investigated areas 163

Prospecting in industrial countries 169

Geological mapping, phases and types of prospecting 170

The prospecting-exploratory stage of mineral deposits 173
Detailed geological mapping 173
Detailed metallometric mapping 176
Structural research of ore fields and ore deposits 179
Documentation and prospecting-exploratory works on mineral deposits 180
Maps of mineral resources and reserves 182
Economic assessment of the prospecting-exploratory results 183
Geophysical methods of prospecting and exploration of metallic, non-metallic and coal deposits (*Prof. Ing. J. Gruntorád, CSc.*) 185
Physical properties of rocks and minerals 185
Geophysical methods 190
Application of geophysical methods 195
Prospecting and exploration of oil and gas deposits (*Prof. Dr. V. Homola, CSc.*) 220
1. The genesis of oil and natural gas and of their deposits 220
2. Prospecting and exploration 221
3. Prospecting for oil traps 223
Direct prospecting methods 237
Indirect prospecting methods (*in collaboration with Dr. S. Mareš, CSc., Assoc. Prof. Ing. K. Müller, CSc. and Dr. J. Skopec, CSc.*) 241
Pioneer boreholes 250
Exploratory drilling 255
Drilling of producing wells 258

PART II (*Prof. Ing. M. Böhmer, CSc.*) 259

Exploration of mineral deposits 259
Preliminary and detailed exploration 259
Methods of subsurface exploration 262
Exploratory systems 265
Exploratory grids 273
The use of mining works and drilling in exploratory systems 277
Location of exploratory works 279
Delimitation of the deposit 282
Delineation of the deposit in the exploratory grid 283
Evolution of an exploratory grid 290
Determination of the optimum density of exploratory grids 295
1. Determination by analogy 296
2. Comparison of exploration data with mining records 296
3. Gradual thinning of exploratory grid 302
4. Analysis of the accuracy of exploratory profiles 307
5. Mathematical-statistical methods 307
6. Determination of the optimum density of exploratory grids by modelling 310
7. The economics of exploration costs 311
Categories of mineral reserves and degrees of geological assurance of the deposit 312
Sampling 320
Chemical sampling 320
Sampling in underground workings 320
Sampling of exploratory drill holes 324
Mineralogical sampling 326
The initial sample weight and density of sampling 328
Combining basic samples 330

Preparation of samples for chemical analysis . . . 331
Technological sampling . . . 335
Control of sampling . . . 336
Determination of the quality of raw materials based on physical properties . . . 337

Geological documentation of mineral deposits . . . 339
Basic geological documentation of exploratory works . . . 339
Underground geological mapping . . . 341
The use of photography in underground mapping . . . 345
Documentation of exploratory drill holes . . . 347
Documentary rock material . . . 349
Construction of geological sections . . . 352
Spatial illustration and models of mineral deposits . . . 357

Hydrogeological and engineering-geological investigations of mineral deposits (*Dr. I. Mucha, CSc.*) 358
Hydrogeological investigation on various types of deposits . . . 359
Methods of hydrogeological investigation of mineral deposits . . . 360
Engineering-geological problems in prospecting, exploration and working of mineral deposits 362

Exploration during mining operations . . . 365

Prospecting and exploration of placer deposits . . . 368
Genetic types of placer deposits . . . 369
Classification of placers according to their age . . . 372
Geomorphological and genetic classification of placers (with a view to prospecting and exploration) . . . 373
1. Placers in the valleys of recent drainage pattern . . . 373
2. Placer deposits related to the former drainage pattern . . . 376
3. Placer deposits of piedmont and intermontane depressions . . . 377
4. Placer deposits of sea coasts . . . 377
Methods for prospecting and exploration of placers . . . 378
Preliminary and detailed exploration of placers . . . 379
Exploratory systems . . . 380
Methods of placer exploration . . . 383
Sampling of placer deposits . . . 384
Placer mining . . . 394

Economic evaluation of mineral deposits . . . 396

References to prospecting . . . 407

References to exploration . . . 412

Index . . . 415
