Foreword by James Martin	v
Foreword by Dan L. Jonson	vii
Preface	ix
1 Business engineering	1
1.1 Introduction	1
1.2 What is business engineering?	2
1.3 Why do we need business engineering?	7
1.4 What does the new company look like?	9
1.5 Business engineering, business (process) reengineering, and business improvement	13
1.6 Risk management	18
1.7 The future of business engineering in the corporate world	22
1.8 Summary	25
1.9 References	26
2 What is business modelling?	27
2.1 Introduction	27
2.2 What is a model?	28
2.3 What is a business model?	30
2.4 What does a business model look like?	33
2.5 A few words about the traditional way of modelling	35
2.6 Why do we need business modelling?	36
2.7 Who should have a business model, and why?	38
2.8 Working to develop a business model	42
2.9 Summary	43
2.10 References	44

3	What is object orientation?	45
<hr/>		
3.1	Introduction	45
3.2	Object-oriented models	46
3.3	What is an object?	48
3.4	Objects are linked	52
3.5	Objects can form aggregates	59
3.6	Objects belong to a class	60
3.7	One class can inherit other classes	63
3.8	A summary	67
3.9	Why is object orientation necessary?	68
3.10	Object orientation as a platform for the future	69
3.11	Object-oriented business modelling	71
3.12	Summary	73
3.13	References	74
4	Object-oriented business engineering – an overview	77
<hr/>		
4.1	Introduction	77
4.2	Object-oriented business engineering in context	77
4.3	Business reengineering overview	78
4.4	The reengineering directive	82
4.5	Envisioning	83
4.6	The objective specification	88
4.7	Reversing the existing business	89
4.8	Engineering the new business	90
4.9	Installing the new processes	91
4.10	Iteration	92
4.11	Business improvement	92
4.12	Summary	95
4.13	References	96
5	Architecture	97
<hr/>		
5.1	Introduction	97
5.2	What must you be able to express in a business model?	98

5.3	Internal and external models of a business	100
5.4	The use-case model	101
5.5	The object model	112
5.6	Use cases versus objects	126
5.7	Associations between use cases	134
5.8	More about use cases	140
5.9	Subsystems	142
5.10	Summary	146
5.11	References	149
6	Reversing the existing business	151
6.1	Introduction	151
6.2	Why reverse engineering?	152
6.3	Overview	154
6.4	Building a use-case model	155
6.5	Building an object model	162
6.6	Analysing the result	165
6.7	Summary	167
6.8	References	168
7	Forward business engineering	169
7.1	Introduction	169
7.2	Building a use-case model	170
7.3	Object modelling	180
7.4	Interaction diagrams	191
7.5	Information system development	194
7.6	Verifying the new business	195
7.7	Summary	197
7.8	References	198
8	An example	199
8.1	Introduction	199
8.2	What do we want to change?	200
8.3	What kind of organization do we have now?	202

8.4	New business processes	207
8.5	An object model of the new business	216
8.6	Work-flow descriptions	233
8.7	Summary	233
8.8	References	235
9	Building the supporting information system	237
9.1	Introduction	237
9.2	What is software development?	238
9.3	The software-development business-system objects	251
9.4	System development and business development	270
9.5	Procuring the new information-system support	282
9.6	Summary	294
9.7	References	296
10	Managing object-oriented business engineering	297
10.1	Introduction	297
10.2	Tailoring the method	298
10.3	Project organization and management	300
10.4	Project staffing	305
10.5	Organization staffing	307
10.6	Reviews	313
10.7	Summary	316
10.8	References	317
11	Scaling up to large businesses	319
11.1	Introduction	319
11.2	Two use-case models at different abstraction levels	320
11.3	Business system areas	324
11.4	Layered business models	331
11.5	Summary	337
	Glossary	339
	Index	345
