1 INTRODUCTION 11

2 CHEMICAL MICRO-INHOMOGENEITY OF THE DUCTILE IRON MATRIX 13
2.1 Eutectic solidification of ductile iron 13
2.2 Segregation of alloying elements during ductile iron soldification 16
2.3 Evaluation of chemical micro-inhomogeneity of the ductile iron matrix 17
2.4 Chemical micro-inhomogeneity of the low-alloy ductile iron matrix 22
References in Chapters 1 and 2 25

3 THE BAINITIC TRANSFORMATION 27
3.1 Definition and structure of bainite 27
3.2 The structure of bainite in Fe–C–Si alloys 29
3.2.1 Distribution and spatial shape of bainitic ferrite particles in ductile iron 29
3.2.2 Morphology of upper and lower bainite 31
3.2.3 Substructure of upper and lower bainite 34
3.2.4 Origin of carbides in upper and lower bainite 37
3.2.5 Structure of intercellular regions in the bainitic matrix of ductile iron 43
3.3 Kinetics of bainitic transformation 44
3.3.1 Transformation diagrams 45
3.3.2 Kinetics of the growth of bainitic ferrite particles 57
3.4 Discussion of results 63
References in Chapter 3 67

4 EFFECT OF AUSTEMPERING CONDITIONS AND CHEMICAL COMPOSITION ON THE MECHANICAL PROPERTIES OF DUCTILE IRON 73
4.1 Unalloyed austempered ductile iron 74
4.1.1 Effect of austempering temperature 74
4.1.2 Effect of austempering time 80
4.2 Low-alloy austempered ductile iron 85
4.2.1 Effect of austempering temperature 86
4.2.2 Effect of austempering time 87
4.2.3 Mechanical characteristics and their relationships 104
4.3 Discussion of results 113
4.3.1 Changes in the structure and mechanical properties during isothermal bainitic transformation in ductile irons 113
4.3.2 Chemical composition, structure and mechanical properties of austempered ductile irons 123
4.3.3 Mechanical properties of ductile irons with various matrix structures 126
References in Chapter 4 127

5 "AUSTEMPERABILITY" OF DUCTILE IRON 130
5.1 Methods of determining hardenability and austemperability . . . 131
5.2 Effective cooling rate and cooling time 132
5.2.1 Experimental determination of effective cooling rate and cooling time 133
5.2.2 Regression equations used to determine the cooling rate or time 134
5.3 Critical cooling rate, critical bar diameter 137
5.3.1 Effects of chemical composition of ductile iron and of isothermal bainitic transformation temperature on critical cooling rate 137
5.3.2 Experimental methods used to determine critical cooling rate and critical bar diameter 140
5.3.3 Experimental-calculation methods for determining critical cooling rate and critical bar diameter 143
5.4 Concluding remarks 154
References in Chapter 5 155

6 MECHANICAL STRESSING OF AUSTEMPERED DUCTILE IRON 158
6.1 Deformation and fracture behaviour of ductile iron under static loading at room temperature 159
6.1.1 Effect of graphite in the ductile iron matrix 159

6.1.2 Mechanical stability of retained austenite in austempered structures 162
6.2 Deformation and fracture behaviour of austempered ductile iron under static loading at low temperatures 170
6.2.1 Transition fracture behaviour 170
6.3 Impact properties of austempered ductile iron 182
6.4 Fracture toughness of austempered ductile iron 185
6.5 Fatigue strength of austempered ductile iron 193
6.5.1 High-cycle fatigue properties of austempered ductile iron . 193
6.5.2 Contact-fatigue properties 198
6.6 Wear resistance of austempered ductile iron 203
References in Chapter 6 206

7 TECHNOLOGICAL ASPECTS OF AUSTEMPERING 210

8 PRACTICAL APPLICATIONS OF AUSTEMPERED DUCTILE IRON 214
References in Chapters 7 and 8 217

9 SUMMARY 220
Index 223
Appendix of illustrations
