

## Contents

Preface	3
Chapter 1. Main examples of heavy tailed distributions	5
1. Pareto distribution	5
2. Strictly stable distributions	11
3. Random stability	15
Chapter 2. Stable distributions	19
1. Definition of stable distributions	19
2. Existence of moments	20
3. The densities of stable distributions	21
4. Some series representations for stable random variables	24
5. Subgaussian distributions	32
6. Simulation	33
7. A linear method of statistical parameter estimation	34
Chapter 3. Multivariate stable distributions	43
1. Stable random vectors	43
2. A counterexample for $0 < \alpha < 1$	47
3. Characteristic function of an $\alpha$ -stable random vector	48
4. Sub-Gaussian vectors	51
5. Series representation in multidimensional case	54
Chapter 4. $\nu$ -infinitely divisible and stable distributions	55
1. Sums of a random number of random variables	55
2. Some limit and transfer theorems	57
3. The definition and existence of a $\nu$ -Gaussian random variable	61
4. Examples of summation schemes admitting $\nu$ -strictly Gaussian laws	64
5. A generalization of the Marcinkiewicz theorem	65
6. $\nu$ -Infinitely divisible random variables	71
7. Accompanying laws	73
8. Approximations of random sums	76
9. Geometric stable distributions	89
10. A generalization of stable laws	135
11. New Representations for Multivariate Geo-stable Distributions	143
12. On the Reliability of Hierarchical Structures	147
Chapter 5. Ill-posed problems	155
1. Main considerations	155
2. Introduction and motivating examples	157
3. Central Pre-Limit Theorem	163
4. Sums of a random number of random variables	165
5. Local <i>pre</i> -limit theorems and their applications to finance	165
6. <i>Pre</i> -limit theorem for extremums	166
7. Relations with robustness of statistical estimators	168
8. Statistical estimation for non-smooth densities	171
Chapter 6. Entire functions of exponential type	175
1. Main definitions	175

2. Fourier transform of the functions from $\mathfrak{M}_{\nu,p}$	178
3. Interpolation formula	179
4. Inequality of different metrics	180
5. Valle'e Poussin kernels	181
6. Application to statistical density estimation	186
Chapter 7. Generalized functions	189
1. Main definitions	189
2. Definition of Fourier transform for generalized functions	193
3. Functions $\varphi_\varepsilon$ and $\psi_\varepsilon$	196
Bibliography	199
