

TABLE OF CONTENT

Foreword	V
Questions Legend	VI
BASICS OF NAVIGATION	1
The Solar System	1
The Earth	1
Time and time conversions	4
Directions	6
Distance	7
MAGNETISM AND COMPASSES	8
General Principles	8
Aircraft Magnetism	12
Principles; Direct & Remote Reading Compasses	13
CHARTS	16
General properties of miscellaneous types of projections	16
Representation of meridians, parallel, great circles & rhumb lines	18
The use of current aeronautical charts	21
DEAD RECKONING NAVIGATION (DR)	36
Basics of dead reckoning	36
Use of the navigational computer	39
The Triangle of velocities; methods of solution	44
List elements required for establishing DR position	51
Calculate DR elements	52
Construct DR position	54
Name range specifics of maximum range and radius of action	55
Miscellaneous DR uncertainties and practical means of correction	57
IN-FLIGHT NAVIGATION	58
Use of visual observations and application to in-flight navigation	58
Navigation in climb and descent	59
Navigation in Cruising Flight, Use of Fixes to Revise Navigation Data	61
Flight Log	65
Purposes of (FMS) Flight Management Systems	66
INERTIAL NAVIGATION SYSTEMS (INS)	68
Principles and Practical application	68
Alignment Procedures	70
Accuracy, reliability, errors and coverage of INS/IRS	72
Flight deck equipment and operation	73
INS operation	74
JAR-FCL-1 / Subpart J	77
Sample Test 1	81
Sample Test 2	86
Correct Answers for Sample Test 1	91
Correct Answers for Sample Test 2	92
Picture Supplements	93
